**Warranty**

ComponentOne warrants that the media on which the software is delivered is free from defects in material and workmanship, assuming normal use, for a period of 90 days from the date of purchase. If a defect occurs during this time, you may return the defective media to ComponentOne, along with a dated proof of purchase, and ComponentOne will replace it at no charge. After 90 days, you can obtain a replacement for the defective media by sending it and a check for \$25 (to cover postage and handling) to ComponentOne.

Except for the express warranty of the original media on which the software is delivered is set forth here, ComponentOne makes no other warranties, express or implied. Every attempt has been made to ensure that the information contained in this manual is correct as of the time it was written. ComponentOne is not responsible for any errors or omissions. ComponentOne's liability is limited to the amount you paid for the product. ComponentOne is not liable for any special, consequential, or other damages for any reason.

**Copying and Distribution**

While you are welcome to make backup copies of the software for your own use and protection, you are not permitted to make copies for the use of anyone else. We put a lot of time and effort into creating this product, and we appreciate your support in seeing that it is used by licensed users only.

# Overview

**ComboBox for ASP.NET Web Forms** is a full-featured combo box control that combines an editable text box with an auto-searchable drop-down list.

## Getting Started

To get started, review the following topics:

- [Key Features](#)
- [Quick Start](#)
- [Samples](#)

# Help with ASP.NET Web Forms Edition

## Getting Started

For information on installing **ComponentOne Studio ASP.NET Web Forms Edition**, licensing, technical support, namespaces and creating a project with the control, please visit [Getting Started with ASP.NET Web Forms Edition](#).

## See Also

[Key Features](#)

# Key Features

**ComboBox for ASP.NET Web Forms** provides the following unique key features:

- **Auto-searchable Drop-down list**  
Locate items quickly by typing the first few characters. ComboBox will automatically search the list and select the items for you as you type.
- **Load on Demand**  
Populate items dynamically from the server using AJAX. This helps to keep page sizes small and manageable.
- **Item Selection**  
The C1ComboBox control provides single and multiple selection modes allowing end-users to select one or several items in the drop-down list.
- **Resizable Drop-down List**  
The C1ComboBox control provides single and multiple selection modes allowing end-users to select one or several items in the drop-down list.
- **Theming**  
With just a click of the SmartTag, change the bar charts look by selecting one of the 5 premium themes (Midnight, Aristo, Rocket, Cobalt, and Sterling). Optionally, use ThemeRoller from jQuery UI to create a customized theme.

- **CSS Support**  
Use a cascading style sheet (CSS) style to define custom skins. CSS support allows you to match the accordion to your organization's standards.

## Quick Start

The [C1ComboBox](#) Quick Start describes how to get started with the ASP.NET control, **C1ComboBox**. In this quick start, you will create an ASP.NET application containing one **C1ComboBox** control and three **C1ComboBoxItems**. Declare one Label control in an .aspx file. Then create an event handler for the **SelectedItem** event which displays the value of the selected combobox item.

[Step 1 of 4: Creating an Application](#)

[Step 2 of 4: Adding Items to C1ComboBox](#)

[Step 3 of 4: Create an Event Handler for the Selected Item](#)

[Step 4 of 4: Running the Project](#)

## Step 1 of 4: Creating an Application

In this topic you will create an ASP.NET Edition web site and add a **C1ComboBox** control to the Default.aspx page.

1. Begin by creating an ASP.NET Edition Web application. Note that if using Visual Studio 2008, you must add a **ScriptManager** control to the form. If using Visual Studio 2005, the **ScriptManager** control is automatically added to the form.
2. Add the following references to your project:
  - C1.Web.Wijmo.Controls.4.dll
  - C1.Web.Wijmo.Controls.Design.4.dll
  - C1.C1Report.4.dll
3. Add the controls to the Toolbox.
  1. Open the Visual Studio IDE (Microsoft Development Environment). Make sure the Toolbox is visible (select **Toolbox** in the **View** menu if necessary) and right-click it to open the context menu.
  2. To make the Studio for ASP.NET Web Forms Edition components appear on their own tab in the Toolbox, select **Add Tab** from the context menu and type in the tab name, for example, ASP.NET Web Forms Edition.
  3. Right-click the tab where the component is to appear and select **Choose Items** from the context menu. The **Choose Toolbox Items** dialog box opens.
  4. In the dialog box, select the **.NET Framework Components** tab. Sort the list by Namespace (click the **Namespace** column header) and check the check boxes for all components belonging to namespace C1.Web.Wijmo.Controls.C1ComboBox.
  5. Click **OK** to close the dialog box. The controls are added to the Visual Studio Toolbox.

Select the Design tab and remove the default content from the Default.aspx page. While in Design view, navigate to the Visual Studio Toolbox and double-click the **C1ComboBox** control to add a combobox to the main content of your page.

## Step 2 of 4: Adding Items to C1ComboBox

In this step, you will use the **C1ComboBox Editor** to add items to a **C1ComboBox** control that will appear at run time when you click on its dropdown arrow.

1. Click the C1ComboBox smart tag and select **Edit Items** from the **C1ComboBox Tasks** menu.  
The **C1ComboBox Editor** appears.
2. Click on the C1ComboBoxItem from the **Add Child Item** button three times to get three C1ComboBoxItems.
3. Set the values for the **Text** and **Value** properties for each C1ComboBoxItem to the following:
  - C1ComboItem1 **Text** property to Coach and **Value** property to "Coach Cabin"
  - C1ComboItem2 **Text** property to Business and **Value** property to "Business Cabin"
  - C1ComboItem3 **Text** property to First and **Value** property to "First Cabin"
4. Click **OK** to apply the changes to the **C1ComboBox** control and close the **C1ComboBox Editor**.

## Step 3 of 4: Create an Event Handler for the Selected Item

In this topic the **selectedItem** event is triggered when an item in the combobox is selected.

1. Select the **Source** tab and add the following script for the **C1ComboBox1\_OnClientChanged** function before the **<body>** tag:

[To write code in Client Side script](#)

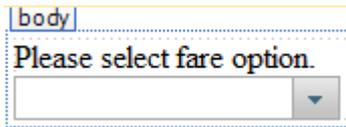

```
<script id="scriptInit" type="text/javascript">
    function C1ComboBox1_OnClientChanged(e, data) {
        var val = data.selectedItem.value;
        $('#output').html('I selected the ' + val + '
airfare option. ');
    }
</script>
```

2. Add a **Label** to the source page before the C1ComboBox tags so the **Label** appears above the **C1ComboBox**.

To write code in Source View

```
<label id="output">
    Please select fare option.</label>
```

The label should appear like the following

3. Within the C1ComboBox tags assign the `onclientchanged="C1ComboBox1_OnClientChanged"` function to the `onclientchanged` property so it appears like the following:

To write code in Source View

```
<c1:C1ComboBox ID="C1ComboBox1" runat="server" Width="160px"
    onclientchanged="C1ComboBox1_OnClientChanged">
```

## Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- Select an item from the list.  
The value of the item selected appears updated in the text below.

I selected the First Cabin airfare option.

Congratulations! You have successfully completed the **ComboBox for ASP.NET Web Forms Quick Start**.

## Design-Time Support

**C1ComboBox** provides customized context menus, smart tags, and a designer that offers rich design-time support and simplifies working with the object model.

The following sections describe how to use C1ComboBox design-time environment to configure the **C1ComboBox** control.

### See Also

[Smart Tag](#)

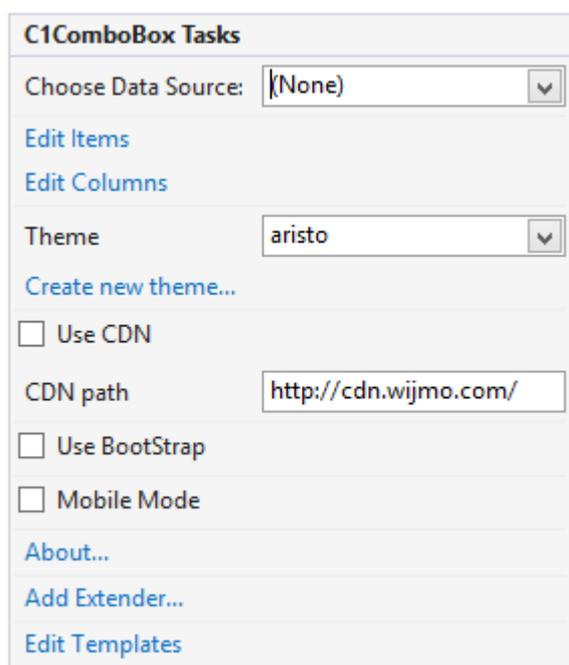

[Context Menu](#)

[Collection Editors](#)

## Smart Tag

In Visual Studio, the **C1ComboBox** control includes a smart tag. A smart tag represents a short-cut tasks menu that provides the most commonly used properties in **C1ComboBox**.

To access the **C1ComboBox Tasks** menu, click on the smart tag in the upper-right corner of the **C1ComboBox** control. This will open the **C1CombBox Tasks** menu.

The **C1ComboBox Tasks** menu operates as follows:

### Choose Data Source

Clicking on the **Choose Data Source** item opens a drop-down list where you can choose an existing data source or select a new data source to bind to.

### Edit Items

Clicking the **Edit Items** link item opens the **C1ComboBox** editor.

### Edit Columns

Clicking the Edit Columns link item opens the **Columns Designer** editor.

### Theme

The **Theme** drop-down box allows you to set the **Theme** property and change the C1ComboBox control's appearance to one of the five predefined themes. By default this is set

to the **Aristo** theme. For more information about available visual styles, see [Themes](#).

### Create new theme

The **Create new theme** option opens **ThemeRoller for Visual Studio**. This allows you to create a customized theme without leaving your development environment. To find more information on using ThemeRoller in you application, see [ThemeRoller for Visual Studio](#).

### Use CDN

When the **Use CDN** checkbox is selected it loads the client resources from CDN. This is not selected by default.

### CDN path

Displays the url path of the **CDN**.

### Use Bootstrap

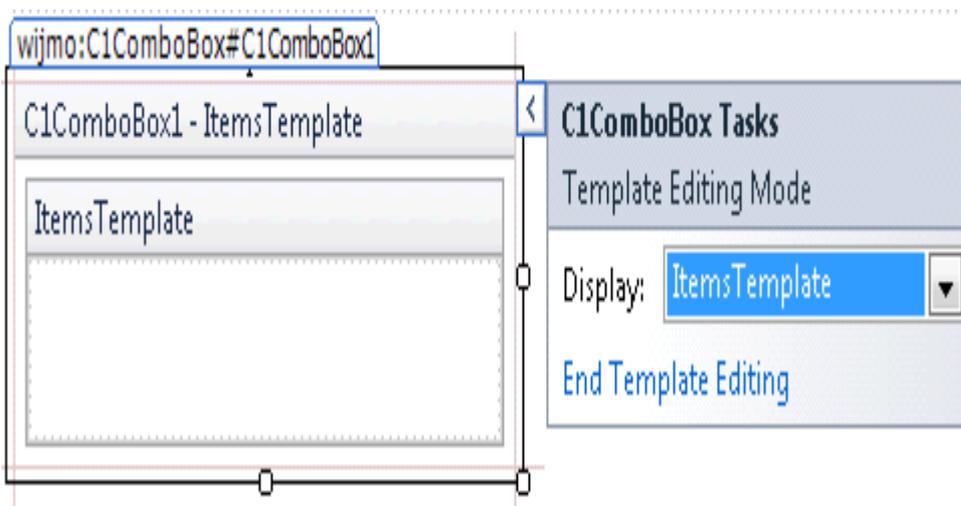

Selecting the **Use Bootstrap** option applies Bootstrap theming to your control. To find more information on using Bootstrap theming in your application, see [Bootstrap theming](#).

### About

Clicking on the **About** item displays a dialog box, which is helpful in finding the version number of **ASP.NET Web Forms Edition** and online resources.

### Edit Templates

Clicking on the **Edit Templates** item switches the **C1ComboBox** control to **Template Editing Mode**:

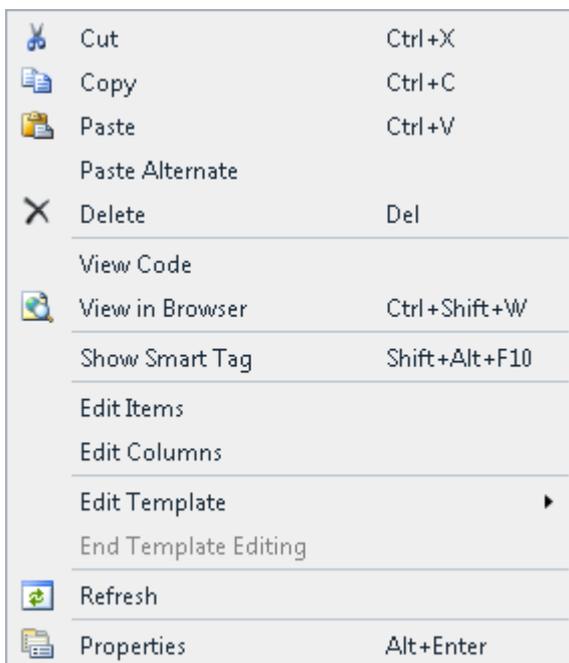

In **Template Editing Mode**, the **C1Combobox Tasks** menu appears with different options:

- **Display**  
Selecting the Display drop-down arrow will open the **Items Template** item that can be customized. Select the **Items Template** from this list to open the template to be edited.
- **End Template Editing**  
Clicking the **End Template Editing** item will end **Template Editing Mode** and return you to the main **C1ComboBox Tasks** menu.

## Context Menu

**C1ComboBox** has additional commands with each context menu that Visual Studio provides for all .NET and ASP.NET controls.

Right-click anywhere on the list to display the **C1ComboBox** context menu:

The context menu commands operate as follows:

### **Edit Items**

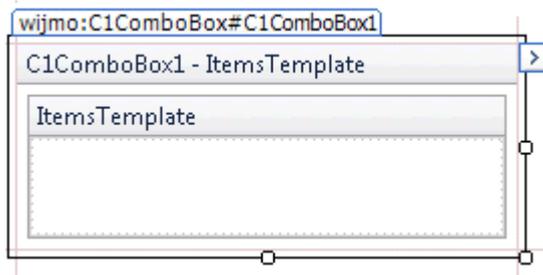

Selecting the **Edit Items** menu item opens the **C1ComboBox** editor.

### **Edit Columns**

Selecting the **Edit Columns** menu item opens the **Columns Designer** editor.

### **Edit Templates**

Selecting Item Template from the Edit Templates menu switches the **C1ComboBox** control to **Template Editing Mode**.

## Collection Editors

C1ComboBox includes the following two collection editors to add/remove/modify C1ComboBoxItems and columns.

- **C1ComboBox Editor**
- **Columns Designer**

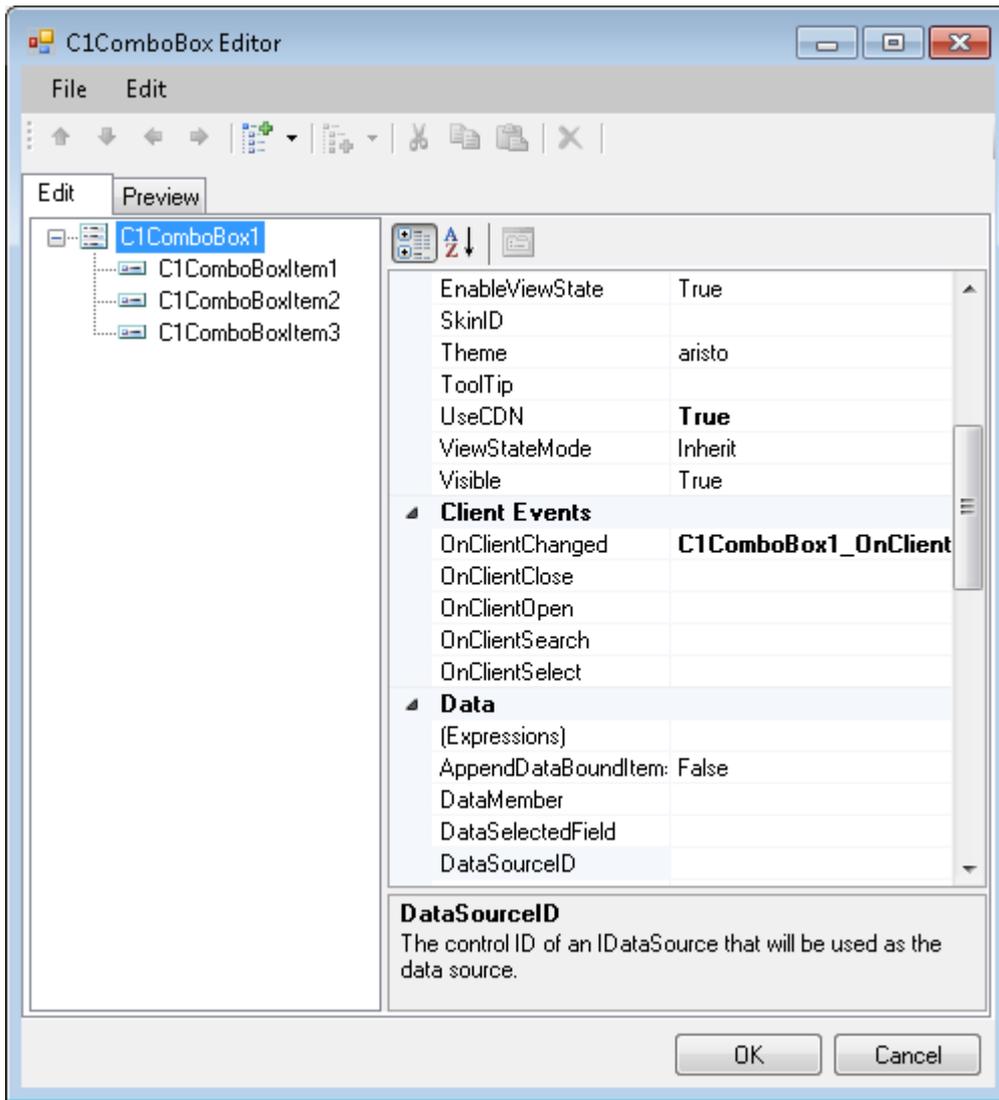

### See Also

[C1ComboBox Editor](#)

[Columns Designer](#)

## C1ComboBox Editor

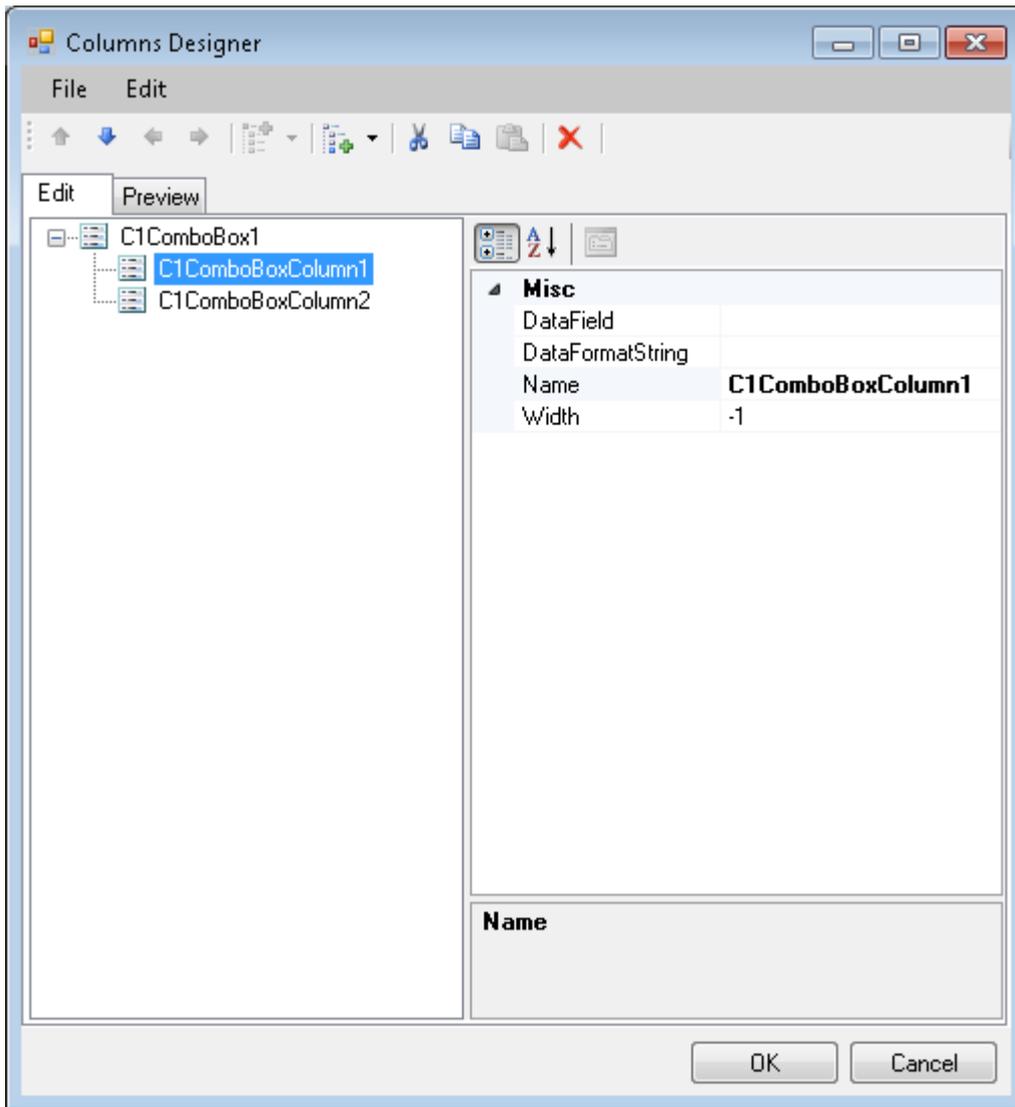

The **C1ComboBox Editor** allows the user to add/remove/modify C1ComboBoxItems in the C1ComboBox control.

To access the **C1ComboBox Editor**, right-click on the **C1ComboBox** control and select **Edit Items** from its context menu.

## Columns Designer

The **Columns Designer** allows you add, remove, or modify columns in the C1ComboBox control.

To access the **Columns Designer**, right-click on the **C1ComboBox** control and select **Columns Designer** from its context menu.

## ComboBox Appearance

The combobox's appearance is controlled by the built-in themes or the CSS styles. The combobox themes effects the appearance of all of the combobox elements such as the combobox items and columns.

[C1ComboBox](#) is designed to make customization easy for you. You have endless possibilities in changing its default appearance.

You can apply CSS styles to modify C1ComboBoxs elements. C1ComboBox provides several built-in CSS Selectors that appear when you select the drop down arrow next to the **CSSClass** property

### See Also

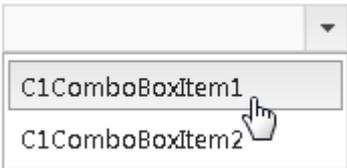

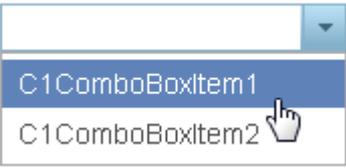

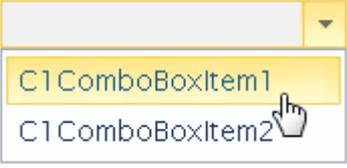

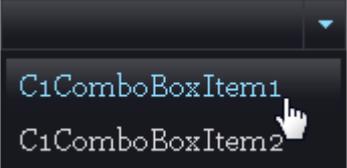

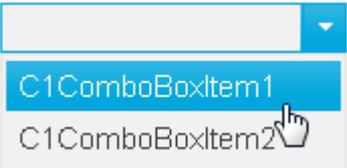

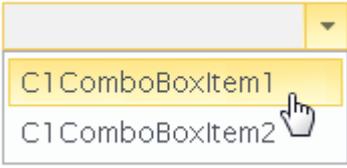

Themes

C1ComboBox CSS Selectors

# Themes

C1ComboBox provides five built-in visual styles for the control **Arctic**, **Aristo**, **Cobalt**, **Midnight**, and **Rocket**, and **Sterling** - that can be easily applied to the control by setting the **Theme** property.

The following table illustrates each of the six built-in themes with the hover style shown.

Theme	Appearance
Arctic	
Aristo (default)	
Cobalt	
Midnight	
Rocket	
Sterling	

# C1ComboBox CSS Selectors

You can style any element of the [C1ComboBox](#) using CSS styles to make their appearance truly unique. To make the customization process easier, ComponentOne includes CSS selectors for each of its six built-in themes.

You can apply general CSS properties such as background, text, font, border, outline, margin, padding, list, and table to applicable CSS selectors.

For a list of common individual CSS selectors and grouped CSS selectors, select the **C1ComboBox** control in your project, and view the drop-down list next to the **CssClass** property in the **C1ComboBox Visual Studio Properties** window.

The following table details the common individual CSS selectors and grouped CSS selectors. You can combine the individual CSS selectors as a group to make the CSS selector more specific and strong. The grouped CSS selectors define styles for more than one element of the C1ComboBox.

CSS Selectors	Description
.wijmo-wijcombobox	Applies the style to the wijcombobox control.
.wijmo-wijcombobox-active-prev	Applies the style to the previous active wijcombobox.
.wijmo-wijcombobox-cell	Applies the style to the cell in the wijcombobox control
.wijmo-wijcombobox-input	Applies the style to the input wijcombobox.
.wijmo-wijcombobox-item ui-state-active	Applies the style to the active state unlisted item of the wijcombobox.
.wijmo-wijcombobox-item ui-state-hover	Applies the style to the hover state unlisted item of the wijcombobox.
.wijmo-wijcombobox-label	Applies the style to the label of the wijcombobox.
.wijmo-wijcombobox-list	Applies the style to the list of the wijcombobox.
.wijmo-wijcombobox-loading	Applies the style to the loading wijcombobox.

.wijmo-wijcombobox-multicolumn	Applies the style to the multicolumn wijcombobox.
.wijmo-wijcombobox-row	Applies the style to the wijcombobox row.
.wijmo-wijcombobox-rowheader	Applies the style to the rowheader of the wijcombobox.
.wijmo-wijcombobox-trigger	Applies the style to the triggered wijcombobox.
.wijmo-wijcombobox-ul	Applies the style to the unlisted wijcombobox.
.wijmo-wijcombobox-wrapper	Applies the style to the wrapper wijcombobox.

## Working with the Client-Side

### ComboBox

**C1ComboBox** client side has a very rich client-side object model since most of its members are identical to the members in the server-side control.

When a [C1ComboBox](#) control is rendered, an instance of the client-side combobox will be created automatically. This means that you can enjoy the convenience of accessing properties and methods of the C1ComboBox control without having to postback to the server.

Using C1ComboBox/s client-side code, you can implement many features in your Web page without the need to send information to the Web server which takes time. Thus, using C1CombBox's client-side object model can increase the efficiency of your Web site.

### See Also

[Client-Side Events](#)

## Client-Side Events

**C1ComboBox** includes several client-side events that allow you to manipulate the combobox items in the C1ComboBox control when an action such as selecting the item, opening the drop-down list, or closing the drop-down list occurs.

Each of the client-side events requires two parameters: the **ID** that identifies the sender **C1ComboBox**.

You can use the sever-side properties, listed in the **Client Side Event** table, to specify the name of the JavaScript function that will respond to a particular client-side event. For example, to assign a JavaScript function called "CloseList" to respond to the closed drop-down list, you would set the [OnClientClose](#) property to "CloseList".

The following table lists the events that you can use in your client scripts. These properties are defined on the server side, but the actual events or the name you declare for each JavaScript function are defined on the client side.

**Client Side Event table**

Event Server-Side Property Name	Event Name	Description
<a href="#">OnClientChanged</a>	Changed	A function called when the select item is changed
<a href="#">OnClientClose</a>	Close	A function called when the drop-down list is closed.
<a href="#">OnClientOpen</a>	Open	A function called when the drop-down list is opened.
<a href="#">OnClientSearch</a>	Search	A function called before searching the list.
<a href="#">OnClientSelect</a>	Select	A function called when any item in the list is selected.

## Samples

Please be advised that this ComponentOne software tool is accompanied by various sample projects and/or demos, which may make use of other ComponentOne development tools included with ComponentOne Studio Enterprise.

**C# Samples**

The following pages within the **ControlExplorer** sample installed with **ASP.NET Web Forms Edition** detail the [C1ComboBox](#) control's functionality:

Sample	Description
--------	-------------

Animation	This sample demonstrates the different animation effects and how you can manipulate their speed.
DataBinding	Demonstrates how to bind C1ComboBox to an XML or Access data source.
Dynamic	Demonstrates how to bind the combobox to the datatable.
LoadOnDemand	This sample demonstrates the different callback events and how you can populate items for c1combobox without postback their speed.
MultipleColumns	Shows how you can easily create multiple columns in the c1combobox by setting the columns option.
Overview	Displays an editable text box/drop-down list on the aspx page.
Position	This sample shows how you can change the position of the drop-down list for the c1combobox by setting the dropDownListPosition option.
Select	This sample illustrates how the select event is triggered when an item in the combobox is selected.

## Task-Based Help

The task-based help assumes that you are familiar with programming in Visual Studio. By following the steps outlined in the Help, you will be able to create projects demonstrating a variety of **ComboBox for ASP.NET Web Forms** features and get a good sense of what C1ComboBox can do.

### See Also

[Adding a Custom Theme](#)

[Databinding the ComboBox](#)

## Adding a Custom Theme

**ComboBox for ASP.NET Web Forms** provides six built-in themes, but if you prefer to use a different theme, you can choose an existing theme using a CDN URL or create your own custom theme with the jQuery ThemeRoller Web application.

## Using ThemeRoller for Visual Studio

The new **ThemeRoller for Visual Studio** makes designing beautiful themes for **ASP.NET Web Forms Edition** Controls easy. For more information on creating and editing a **ThemeRoller for Visual Studio** theme, please see [ThemeRoller for Visual Studio](#).

### Using a CDN URL

1. Click the **C1ComboBox** smart tag to open the Tasks menu.
2. Select **Use CDN**.
3. In the **Theme** property enter a CDN URL to specify the theme; CDN URLs can be found at <http://blog.jqueryui.com/2011/06/jquery-ui-1-8-14/>. In this example, we'll use the sunny theme: <http://ajax.aspnetcdn.com/ajax/jquery.ui/1.8.14/themes/sunny/jquery-ui.css>.  
This theme setting is stored in the <appSettings> of the Web.config file. In the Solution Explorer, double-click the Web.config file. Notice the <appSettings> tag contains a WijmoTheme key and value; this is where the CDN URL you added is specified.
4. Run the project and notice the theme is applied to ComboBox.

### Using jQuery ThemeRoller

1. Go to <http://jqueryui.com/themeroller/>.
2. On the **Roll Your Own** tab, change the settings to create a custom theme; you can customize fonts, colors, backgrounds, borders, and more. Or click the Gallery tab and select an existing theme.
3. Click the Download button and then click Download again on the Build Your Download page.
4. Save and unzip the theme .zip file to a folder within your Visual Studio project folder. In this example, we created a **Themes** folder.
5. In the Solution Explorer, select the project name and click the refresh button so the **Themes** folder appears in your project.
6. Click the **C1ComboBox** smart tag to open the **Tasks** menu.
7. Select **Use CDN**.
8. Right-click on the **C1ComboBox** control and navigate to the **Theme** property in the Properties window and enter the path to your custom theme .css, for example, **Themes/css/custom-theme/jquery-ui-1.8.16.custom.css**.  
This theme setting is stored in the <appSettings> of the Web.config file. In the Solution Explorer, double-click the Web.config file. Notice the <appSettings> tag contains a WijmoTheme key and value; this is where the custom theme you added is specified.
9. Run the project and notice them theme is applied to **C1ComboBox**.

## Databinding the ComboBox

Binding a database table to a combobox can be accomplished using the following steps:

1. Add the **ComboBox** control to your page.
2. Retrieve the data from the appropriate database table. In this example, we use the **C1Nwind.mdb** file so copy the **C1Nwind.mdb** from the **App\_Data** folder in the Control Explorer sample to your project's **App\_Data** folder.

3. Set C1ComboBox1's data properties to the following in your source page:
  - **DataSourceID** property to **AccessDataSource1**. This will set the **ID** of the data source.
  - **DataTextField** property to **UnitPrice**. This will set the field in the data source from which to load the text values.
  - **DataTextFormatString** property to **{0:C}**. This will apply the currency formatting.
  - **DataValueField** property to **OrderID**. This will load the **OrderID** field items into the combobox.
4. Add the following to your source page:

To write code in Source View

```
<asp:AccessDataSource ID="AccessDataSource1" runat="server"
DataFile="~/App_Data/C1NWind.mdb"
SelectCommand="SELECT top 100 [UnitPrice], [OrderID]
FROM [Order Details]"></asp:AccessDataSource>
```

5. Set C1ComboBox's **Width** to **160**. This will allow more width space to accommodate the items in the dropdown box.
6. Save and run your project and observe the binding values will fill the dropdown list of **C1Combobox**.

## Client-Side Reference

As part of the amazing [ComponentOne Web stack](#), the Wijmo jQuery UI widgets are optimized for client-side Web development and utilize the power of jQuery for superior performance and ease of use.

The ComponentOne Wijmo website at <http://wijmo.com/widgets/> provides everything you need to know about Wijmo widgets, including demos and samples, documentation, theming examples, support and more.

The client-side documentation provides an overview, sample markup, options, events, and methods for each widget. To get started with client-side Web development for **Combobox for ASP.NET Web Forms**, click one of the external links to view our Wijmo wiki documentation. Note that the **Overview** topic for each of the widgets applies mainly to the widget, not to the server-side ASP.NET Web Forms control.

- [wijcombobox documentation](#)
- [wijcombobox API](#)

## See Also

[Using the Wijmo CDN](#)

## Using the Wijmo CDN

You can easily load the client-side Wijmo widgets into your web page using a Content Delivery Network (CDN). CDN makes it quick and easy to use external libraries, and deploy them to your users. A CDN is a network of computers around the world that host content. Ideally, if you're in the United States and you access a webpage using a CDN, you'll get your content from a server based in the US. If you're in India or China, and you access the SAME webpage, the content will come from a server a little closer to your location.

When web browsers load content, they commonly will check to see if they already have a copy of the file cached. By using a CDN, you can benefit from this. If a user had previously visited a site using the same CDN, they will already have a cached version of the files on their machine. Your page will load quicker since it doesn't need to re-download your support content.

Wijmo has had CDN support from the very beginning. You can find the CDN page at <http://wijmo.com/downloads/cdn/>. The markup required for loading Wijmo into your page looks similar to this:

[To write code in Source View](#)

```

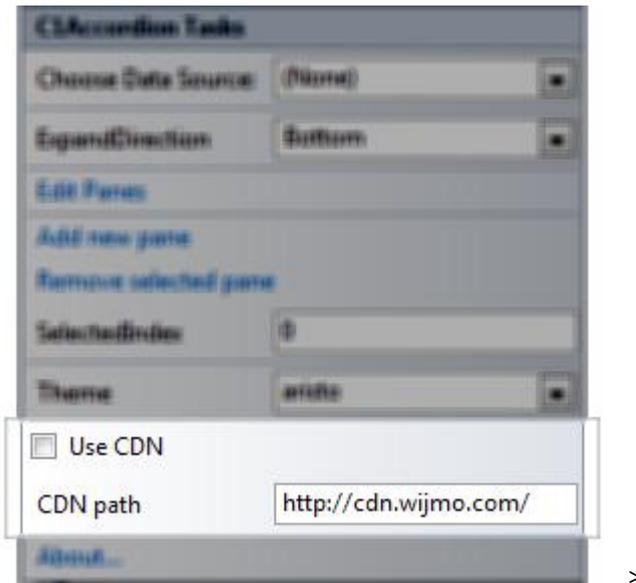

<!--jQuery References-->
<script src="http://ajax.aspnetcdn.com/ajax/jquery/jquery-1.7.1.min.js"
type="text/javascript"></script>
<script src="http://ajax.aspnetcdn.com/ajax/jquery.ui/1.8.17/jquery-
ui.min.js" type="text/javascript"></script>
<!--Theme-->
<link href="http://cdn.wijmo.com/themes/rocket/jquery-wijmo.css"
rel="stylesheet"

    type="text/css" title="rocket-jqueryui" />
<!--Wijmo Widgets CSS-->
<link href="http://cdn.wijmo.com/jquery.wijmo-
complete.all.2.0.0.min.css" rel="stylesheet"

    type="text/css" />
<!--Wijmo Widgets JavaScript-->
<script src="http://cdn.wijmo.com/jquery.wijmo-open.all.2.0.0.min.js"
type="text/javascript"></script>
<script src="http://cdn.wijmo.com/jquery.wijmo-
complete.all.2.0.0.min.js" type="text/javascript"></script>.
```

In this markup, you'll notice that some of the .js files are labeled as \*.min.js. These files have been minified - in other words, all unnecessary characters have been removed - to make the pages load faster. You will also notice that there are no references to individual .js files. The JavaScript for all widgets, CSS, and jQuery references have been combined into one file, respectively, such as `wijmo-complete.2.0.0.min.js`. If you want to link to individual .js files, see the **Dependencies** topic for each widget.

With the **ASP.NET Web Forms Edition** controls, you can click the **Use CDN** checkbox in the control's **Tasks** menu and specify the **CDN path** if you want to access the client-side widgets.

### GetPropertyValue<V> Method

Gets the property value by property name.

## Syntax

Visual Basic (Declaration)	
<pre>Public Function GetPropertyValue(Of V)( _     ByVal <i>propertyName</i> As System.String, _     ByVal <i>nullValue</i> As V _ ) As V</pre>	
C#	
<pre>public V GetPropertyValue&lt;V&gt;(     System.string <i>propertyName</i>,     V <i>nullValue</i> )</pre>	

### Parameters

*propertyName*

Name of the property.

*nullValue*

The null value.

### Type Parameters

V

## GetScriptDescriptors Method

When overridden in a derived class, registers the WidgetDescriptor objects for the control.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overridable Function GetScriptDescriptors() As System.Collections.Generic.IEnumerable(Of ScriptDescriptor)</pre>	

C#

```
public virtual System.Collections.Generic.IEnumerable<ScriptDescriptor>
GetScriptDescriptors()
```

### Return Value

An enumeration of WidgetDescriptor objects.

## See Also

### Reference

[C1TargetControlBase Class](#)

## GetScriptReferences Method

When overridden in a derived class, registers an additional script libraries for the extender control.

## Syntax

Visual Basic (Declaration)

```
Public Overridable Function GetScriptReferences() As
System.Collections.Generic.IEnumerable(Of ScriptReference)
```

C#

```
public virtual System.Collections.Generic.IEnumerable<ScriptReference>
GetScriptReferences()
```

### Return Value

An object that implements the **System.Collections.IEnumerable** interface and that contains ECMAScript (JavaScript) files that have been registered as embedded resources.

## See Also

### Reference

## RegisterDesignTimeStyleSheet Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

resource name of stylesheet file

Register design time stylesheet

## Syntax

Visual Basic (Declaration)	
<pre>Public Sub RegisterDesignTimeStyleSheet( _     ByVal <i>writer</i> As System.Web.UI.HtmlTextWriter, _     ByVal <i>cssResourceName</i> As System.String _ )</pre>	
C#	
<pre>public void RegisterDesignTimeStyleSheet(     System.Web.UI.HtmlTextWriter <i>writer</i>,     System.string <i>cssResourceName</i> )</pre>	

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

*cssResourceName*

resource name of stylesheet file

## See Also

### Reference

## SetPropertyValue<V> Method

Sets the property value by property name.

## Syntax

Visual Basic (Declaration)	
<pre>Public Sub SetPropertyValue(Of V)( _     ByVal <i>propertyName</i> As System.String, _     ByVal <i>value</i> As V _ )</pre>	

```
C#
public void SetProperty<V>(
    System.string propertyName,
    V value
)
```

**Parameters**

*propertyName*

Name of the property.

*value*

The value.

**Type Parameters**

V

## CDNDependencyPaths Property

A string array value specifies all css/js references that wijmo control depends on.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.RefreshPropertiesAttribute(RefreshProperties.All)>
<C1DescriptionAttribute(Key="C1Base.CDNDependencyPaths", Description="A
string array value specifies all css/js references that wijmo control depends
on.")>
<System.ComponentModel.DefaultValueAttribute()>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeriali
zationVisibility.Hidden)>
Public Overridable Property CDNDependencyPaths As System.String()
```

C#

```
[C1Category("Behavior")]
[System.ComponentModel.RefreshProperties(RefreshProperties.All)]
[C1Description(Key="C1Base.CDNDependencyPaths", Description="A string array
value specifies all css/js references that wijmo control depends on.")]
[System.ComponentModel.DefaultValue()]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationV
isibility.Hidden)]
public virtual System.string[] CDNDependencyPaths {get; set;}
```

## Remarks

Using this property, user can specify the CDN dependencies(such as jQuery, jQuery UI, jQuery mobile, bootstrap). If some dependencies are set in this property, wijmo controls will find dependencies path in this property. If found, use the path to load dependency, otherwise, use the default CDN path. For example, if user wants to specify the dependencies of jQuery and jQuery UI, he can set the value like this: ["http://ajax.aspnetcdn.com/ajax/jquery/jquery-1.11.1.min.js", "http://ajax.aspnetcdn.com/ajax/jquery.ui/1.11.1/jquery-ui.js"]

### CDNPath Property

Content Delivery Network path.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
```

```
<System.ComponentModel.RefreshPropertiesAttribute(RefreshProperties.All)>
<C1DescriptionAttribute(Key="C1Base.CDNPath", Description="Content Delivery
Network path.")>
<System.ComponentModel.DefaultValueAttribute(>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeriali
zationVisibility.Hidden)>
Public Overridable Property CDNPath As System.String
```

C#

```
[C1Category("Behavior")]
[System.ComponentModel.RefreshProperties(RefreshProperties.All)]
[C1Description(Key="C1Base.CDNPath", Description="Content Delivery Network
path.")]
[System.ComponentModel.DefaultValue()]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationV
isibility.Hidden)]
public virtual System.string CDNPath {get; set;}
```

## DisplayVisible Property

Gets or sets a value that indicates whether a server control is rendered as UI on the page.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute(>
<WidgetOptionAttribute(>
<C1DescriptionAttribute(Key="C1Controls.DisplayVisible", Description="Gets or
sets a value that indicates whether a server control is rendered as UI on the
page.")>
<C1CategoryAttribute("Behavior")>
<LayoutAttribute(LayoutType.Behavior)>
Public Property DisplayVisible As System.Boolean
```

C#

```
[System.ComponentModel.DefaultValue()]
```

```
[WidgetOption()]
[C1Description(Key="C1Controls.DisplayVisible", Description="Gets or sets a
value that indicates whether a server control is rendered as UI on the
page.")]
[C1Category("Behavior")]
[Layout(LayoutType.Behavior)]
public System.bool DisplayVisible {get; set;}
```

## Remarks

Note that a server control is created and invisible if DisplayVisible is set to false.

## EnableCombinedJavaScripts Property

Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config.

## Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute(Key="C1Base.EnableCombinedJavaScripts",
Description="Enable JavaScripts files combined into one file.")>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeriali
zationVisibility.Hidden)>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
Public Overridable Property EnableCombinedJavaScripts As System.Boolean
```

C#

```
[C1Description(Key="C1Base.EnableCombinedJavaScripts", Description="Enable
JavaScripts files combined into one file.")]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationV
isibility.Hidden)]
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
public virtual System.bool EnableCombinedJavaScripts {get; set;}
```

## Enabled Property

Gets or sets a value indicating whether the Web server control is enabled.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;WidgetOptionAttribute()&gt; &lt;System.ComponentModel.DefaultValueAttribute()&gt; &lt;C1DescriptionAttribute(Key="C1Base.Enabled", Description="Indicates whether control is enabled.")&gt; &lt;C1CategoryAttribute("Behavior")&gt; Public Overrides Property Enabled As System.Boolean</pre>	
C#	
<pre>[WidgetOption()] [System.ComponentModel.DefaultValue()] [C1Description(Key="C1Base.Enabled", Description="Indicates whether control is enabled.")] [C1Category("Behavior")] public override System.bool Enabled {get; set;}</pre>	

### Property Value

true if control is enabled; otherwise, false. The default is true.

## RegisterDesignTimeStyleSheet Method

Register design-time CSS stylesheet.

### Syntax

Visual Basic (Declaration)	
<pre>Public Sub RegisterDesignTimeStyleSheet( _     ByVal <i>writer</i> As System.Web.UI.HtmlTextWriter, _     ByVal <i>cssResourceName</i> As System.String _ )</pre>	
C#	
<pre>public void RegisterDesignTimeStyleSheet(     System.Web.UI.HtmlTextWriter <i>writer</i>,</pre>	

```
System.string cssResourceName
)
```

**Parameters**

*writer*

*cssResourceName*

CSS resource name.

**Remarks**

The *cssResourceName* is the link to an resource element.

## C1.Web.Wijmo.Controls.C1ComboBox

### Namespace

## Overview

### Classes

	Class	Description
	<a href="#">C1ComboBox</a>	Represents a ComboBox in an ASP.NET Web page.

	<a href="#">C1ComboBoxCallbackEventArgs</a>	Contains event data for <a href="#">C1ComboBox.CallbackDataBind</a> event.
	<a href="#">C1ComboBoxColumn</a>	Represents a combobox column in the <a href="#">C1ComboBox</a> control.
	<a href="#">C1ComboBoxEventArgs</a>	Contains event data for <a href="#">C1ComboBox.SelectedIndexChanged</a> event and <b>C1ComboBox.TextChanged</b> event.
	<a href="#">C1ComboBoxItem</a>	Represents a combobox items in the <a href="#">C1ComboBox</a> control.
	<a href="#">C1ComboBoxItemCollection</a>	Represents a collection of <a href="#">C1ComboBoxItem</a> objects.
	<a href="#">C1ComboBoxItemEventArgs</a>	Contains event data for data binding events. Such as <a href="#">C1ComboBox.BoundItemCreated</a> event and <a href="#">C1ComboBox.ItemDataBinding</a> event.
	<a href="#">C1ComboBoxItemPopulateEventArgs</a>	Contains event data for <a href="#">C1ComboBox.ItemPopulate</a> event.
	<a href="#">C1ComboBoxSerializer</a>	Represents C1ComboBoxSerializer which will serialize C1ComboBox.
	<a href="#">C1ComboBoxTemplateContainer</a>	Template container for C1ComboBox.
	<a href="#">C1ComboColumnCollection</a>	Represents C1ComboColumn collection.

## Delegates

	Delegate	Description
	<a href="#">C1ComboBoxCallbackEventHandler</a>	Represents the method that will handle <a href="#">C1ComboBox.CallbackDataBind</a> event.
	<a href="#">C1ComboBoxEventHandler</a>	Represents the method that will handle <a href="#">C1ComboBox.SelectedIndexChanged</a> event.

	<a href="#">C1ComboBoxItemEventHandler</a>	Represents the method that will handle an data binding events of <a href="#">C1ComboBox</a> . Such as <a href="#">C1ComboBox.BoundItemCreated</a> event and <a href="#">C1ComboBox.ItemDataBinding</a> event.
	<a href="#">C1ComboBoxItemPopulateEventHandler</a>	Represents the method that will handle <a href="#">C1ComboBox.ItemPopulate</a> event.

## Enumerations

	Enumeration	Description
	<a href="#">CallbackDataPopulate</a>	Specifies the means of populating items for combobox at Callback mode.
	<a href="#">TriggerPosition</a>	Specifies the position of the drop-down list trigger

### Public Constructors

	Name	Description
	<a href="#">C1ComboBox Constructor</a>	Initializes a new instance of the class.

[Top](#)

### Public Properties

	Name	Description
	<a href="#">AccessKey</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">AppendDataBoundItems</a>	Gets or sets a value determines whether to append bound items for <a href="#">C1ComboBox</a> .
	<a href="#">AppRelativeTemplateSourceDirectory</a>	(Inherited from System.Web.UI.Control)
	<a href="#">Attributes</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">AutoComplete</a>	A value that determines whether to start the auto-complete function after typing in the text if a match exists. Default: true. Type: Boolean.

 <a href="#">AutoFilter</a>	A value determines whether to shorten the drop-down list items by matching the text in the textbox after typing. Default: true. Type: Boolean.
 <a href="#">AutoPostBack</a>	Sets or retrieves a value that indicates whether or not the control posts back to the server each time a user interacts with the control.
 <a href="#">CallbackDataPopulate</a>	Gets or sets a value that determines which means to populate data for c1combobox(without posting back).
 <a href="#">ClientID</a>	(Inherited from System.Web.UI.Control)
 <a href="#">ClientIDMode</a>	(Inherited from System.Web.UI.Control)
 <a href="#">Columns</a>	Collection of columns in the combobox.
 <a href="#">CommandArgument</a>	
 <a href="#">CommandName</a>	
 <a href="#">Controls</a>	(Inherited from System.Web.UI.Control)
 <a href="#">ControlStyle</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">ControlStyleCreated</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">CssClass</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">DataMember</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)
 <a href="#">DataSelectedField</a>	Gets or sets the field in the data source from which

		to load item state.
	<a href="#">DataSource</a>	(Inherited from System.Web.UI.WebControls.BaseDataBoundControl)
	<a href="#">DataSourceID</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)
	<a href="#">DataSourceObject</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)
	<a href="#">DataTextField</a>	Gets or sets the field in the data source from which to load text values.
	<a href="#">DataTextFormatString</a>	The formatting applied to the text field. For example, "{0:d}".
	<a href="#">DataValueField</a>	Gets or sets the field in the data source from which to load item values.
	<a href="#">Delay</a>	A value that determines the duration (in milliseconds) of the time to delay before autocomplete begins after typing stops. Default: 300. Type: Number.
	<a href="#">DropDownHeight</a>	A value that specifies the height of the drop-down list. Default: 300. Type: Number.
	<a href="#">DropDownListPosition</a>	A value that specifies the position options of the drop-down list
	<a href="#">DropDownWidth</a>	A value that specifies the width of the drop-down list. Default: "-1". Type: Number.
	<a href="#">EnableCallbackMode</a>	Gets or sets a value that determines whether to enable callback to load <a href="#">C1ComboBoxItems</a> on demand.

 <a href="#">EnableTheming</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">EnableViewState</a>	(Inherited from System.Web.UI.Control)
 <a href="#">EnsureDropDownOnBody</a>	A value indicating the dropdown element will be append to the body or combobox container. If the value is true, the dropdown list will be appended to body element, else it will append to the combobox container. Default: true. Type: Boolean.
 <a href="#">ForceSelectionText</a>	A value that determines whether to check the input text against the text of the selected item when the focus blurs. Default: false. Type: Boolean.
 <a href="#">HasAttributes</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">Height</a>	Overridden. Gets or sets the Height of the combobox.
 <a href="#">HidingAnimation</a>	A value specifies the animation options for the drop-down list when it is hidden. Default: null. Type: Object.
 <a href="#">HighlightMatching</a>	A value that determines whether to highlight the keywords in an item. If "abc" is typed in the textbox, all "abc" matches are highlighted in the drop-down list. Default: true. Type: Boolean.
 <a href="#">ID</a>	(Inherited from System.Web.UI.Control)
 <a href="#">IsEditable</a>	A value that determines whether input is editable. Default: true. Type: Boolean.
 <a href="#">Items</a>	Collection of child items in the combobox.

 <a href="#">ItemsTemplate</a>	Gets or sets the template of the items.
 <a href="#">ItemType</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)
 <a href="#">LabelText</a>	A value that specifies the text in the wijcombobox label. Default: null. Type: String.
 <a href="#">MinLength</a>	A value that determines the minimum length of text that can be entered in the wijcombobox text box to issue an AJAX request. Default: 4. Type: Number.
 <a href="#">MultipleSelectionSeparator</a>	A value that specifies the separator for the multiple selected items text in the textbox. Default: ",". Type: String.
 <a href="#">NamingContainer</a>	(Inherited from System.Web.UI.Control)
 <a href="#">OnClientChanged</a>	A function called when select item is changed.
 <a href="#">OnClientClose</a>	A function called when drop-down list is closed.
 <a href="#">OnClientOpen</a>	A function called when drop-down list is opened.
 <a href="#">OnClientSearch</a>	A function called before searching the list.
 <a href="#">OnClientSelect</a>	A function called when any item in list is selected.
 <a href="#">OnClientSelectedIndexChanged</a>	A function called after the selected index of the C1ComboBox has changed.
 <a href="#">OnClientSelectedIndexChanging</a>	A function called when the selected index of the C1ComboBox is about to change.
 <a href="#">OnClientTextChanged</a>	A function called when when the Text property is changed.
 <a href="#">Page</a>	(Inherited from System.Web.UI.Control)

 <a href="#">Parent</a>	(Inherited from System.Web.UI.Control)
 <a href="#">RenderingCompatibility</a>	(Inherited from System.Web.UI.Control)
 <a href="#">SelectedIndex</a>	A value that specifies the index of the item to select when using single mode. If the selectionMode is "multiple", then this option could be set to an array of Number which contains the indices of the items to select. Default: -1. Type: Number/Array.
 <a href="#">SelectedIndices</a>	Gets or sets the SelectedIndices of <a href="#">C1ComboBox</a> .
 <a href="#">SelectedItem</a>	Gets the SelectedItem of <a href="#">C1ComboBox</a> .
 <a href="#">SelectedItems</a>	Gets the SelectedItems of <a href="#">C1ComboBox</a> .
 <a href="#">SelectedValue</a>	Gets or sets the SelectedValue of <a href="#">C1ComboBox</a> .
 <a href="#">SelectElementWidthFix</a>	A value added to the width of the target select element to account for the scroll bar width of superpanel. Default: 6. Type: Number. Unit for this value is pixel. Because the width of the scroll bar may be different between browsers if wijcombobox is initialized with the width of the HTML select element, the text may be hidden by the scroll bar of wijcombobox.
 <a href="#">SelectionMode</a>	
 <a href="#">SelectMethod</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)
 <a href="#">SelectOnItemFocus</a>	A value that determines whether to select the item when the item gains focus or is activated. Default: false. Type: Boolean.
 <a href="#">ShowingAnimation</a>	A value that specifies the animation options for a drop-down list when it is visible. Default: null. Type:

		Object.
	ShowTrigger	A value that determines whether to show the trigger of wijcombobox. Default: true. Type: Boolean.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.WebControls.WebControl)
	Style	(Inherited from System.Web.UI.WebControls.WebControl)
	SupportsDisabledAttribute	(Inherited from System.Web.UI.WebControls.BaseDataBoundControl)
	TabIndex	(Inherited from System.Web.UI.WebControls.WebControl)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Text	Text in the combobox.
	ToolTip	(Inherited from System.Web.UI.WebControls.WebControl)
	TriggerPosition	A value that specifies the position of the drop-down list trigger. Default: "right". Type: String.
	UniqueID	Overridden. Gets the uniqueID of this control
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	Overridden. Gets or sets the width of the combobox.

## LoadLayout(String) Method

[Example](#)

The file where the values of layout properties will be loaded.

Loads control layout properties from the file.

## Syntax

Visual Basic (Declaration)	
----------------------------	--

```
Public Overloads Sub LoadLayout( _
    ByVal filename As System.String _
)
```

C#

```
public void LoadLayout(
    System.string filename
)
```

### Parameters

*filename*

The file where the values of layout properties will be loaded.

## Example

Following code shows how to use this method.

- C#

```
C1ComboBox comboBox = new C1ComboBox();
comboBox.Items.Add(new C1ComboBoxItem("test1"));
comboBox.Items.Add(new C1ComboBoxItem("test2"));
string path = "c:\comboBox.xml";
// the comboBox is saved in comboBox.xml
comboBox.SaveLayout(path);

// load from comboBox.xml
C1ComboBox comboBox2 = new C1ComboBox();
comboBox2.LoadLayout(path);
```

## See Also

### Reference

### LoadLayout(Stream) Method

#### Example

The stream where the values of layout properties will be loaded.

Load control layout properties from the stream.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub LoadLayout( _     ByVal stream As System.IO.Stream _ )</pre>	
C#	
<pre>public void LoadLayout(     System.IO.Stream stream )</pre>	

### Parameters

*stream*

The stream where the values of layout properties will be loaded.

### Example

Following code shows how to use this method.

- [C#](#)

```
// save comboBox properties to a MemoryStream object.
MemoryStream m = new MemoryStream();
C1ComboBox comboBox = new C1ComboBox();
comboBox.Items.Add(new C1ComboBoxItem("test1"));
comboBox.Items.Add(new C1ComboBoxItem("test2"));
comboBox.SaveLayout(m);
// load from stream.
C1ComboBox comboBox2 = new C1ComboBox();
comboBox2.LoadLayout(m);
```

#### LoadLayout(String,LayoutType) Method

##### Example

The file where the values of layout properties will be loaded.

The layout types to load.

Loads control layout properties with specified types from the file.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub LoadLayout( _     ByVal filename As System.String, _     ByVal layoutTypes As LayoutType _ )</pre>	
C#	
<pre>public void LoadLayout(     System.string filename,     LayoutType layoutTypes )</pre>	

### Parameters

*filename*

The file where the values of layout properties will be loaded.

*layoutTypes*

The layout types to load.

## Example

Following code shows how to use this method.

- [C#](#)

```
C1ComboBox comboBox = new C1ComboBox();
comboBox.Items.Add(new C1ComboBoxItem("test1"));
comboBox.Items.Add(new C1ComboBoxItem("test2"));
string path = "c:\comboBox.xml";
// the comboBox is saved in comboBox.xml
comboBox.SaveLayout(path);
```

```
// load from comboBox.xml, only properties with Appearance category
is loaded.
```

```
C1ComboBox comboBox2 = new C1ComboBox();
comboBox2.LoadLayout(path, LayoutType.Appearance);
```

## See Also

## LoadLayout(Stream,LayoutType) Method

### Example

The stream where the values of the layout properties will be loaded.

The layout types to load.

Loads the control layout properties with specified types from the stream.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub LoadLayout( _     ByVal stream As System.IO.Stream, _     ByVal layoutTypes As LayoutType _ )</pre>	
C#	
<pre>public void LoadLayout(     System.IO.Stream stream,     LayoutType layoutTypes )</pre>	

### Parameters

*stream*

The stream where the values of the layout properties will be loaded.

*layoutTypes*

The layout types to load.

## Example

Following code shows how to use this method.

- [C#](#)

```
// save comboBox properties to a MemoryStream object.
MemoryStream m = new MemoryStream();
C1ComboBox comboBox = new C1ComboBox();
comboBox.Items.Add(new C1ComboBoxItem("test1"));
comboBox.Items.Add(new C1ComboBoxItem("test2"));
comboBox.SaveLayout(m);
// load from stream, only properties with Appearance category is
loaded.
C1ComboBox comboBox2 = new C1ComboBox();
comboBox2.LoadLayout(m, LayoutType.Appearance);
```

## SaveLayout(String) Method

[Example](#)

The file where the values of the layout properties will be saved.

Saves the control layout properties to the file.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub SaveLayout( _     ByVal <i>filename</i> As System.String _ )</pre>	
C#	
<pre>public void SaveLayout(     System.string <i>filename</i></pre>	

```
)
```

## Parameters

*filename*

The file where the values of the layout properties will be saved.

## Example

Following code shows how to use this method.

- [C#](#)

```
C1ComboBox comboBox = new C1ComboBox();
comboBox.Items.Add(new C1ComboBoxItem("test1"));
comboBox.Items.Add(new C1ComboBoxItem("test2"));
string path = "c:\\comboBox.xml";
// the comboBox is saved in comboBox.xml
comboBox.SaveLayout(path);
```

## See Also

### SaveLayout(Stream) Method

#### Example

The stream where the values of layout properties will be saved.

Saves control layout properties to the stream.

## Syntax

Visual Basic (Declaration)

```
Public Overloads Sub SaveLayout( _
    ByVal stream As System.IO.Stream _
)
```

C#

```
public void SaveLayout(
    System.IO.Stream stream
)
```

## Parameters

*stream*

The stream where the values of layout properties will be saved.

## Example

Following code shows how to use this method.

- [C#](#)

```
// save comboBox properties to a MemoryStream object.
MemoryStream m = new MemoryStream();
C1ComboBox comboBox = new C1ComboBox();
comboBox.Items.Add(new C1ComboBoxItem("test1"));
comboBox.Items.Add(new C1ComboBoxItem("test2"));
comboBox.SaveLayout(m);
```

## Public Properties

	Name	Description
	<a href="#">AccessKey</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">AppendDataBoundItems</a>	Gets or sets a value determines whether to append bound items for <a href="#">C1ComboBox</a> .
	<a href="#">AppRelativeTemplateSourceDirectory</a>	(Inherited from System.Web.UI.Control)
	<a href="#">Attributes</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">AutoComplete</a>	A value that determines whether to start the auto-complete function after typing in the text if a match

		exists. Default: true. Type: Boolean.
	<a href="#">AutoFilter</a>	A value determines whether to shorten the drop-down list items by matching the text in the textbox after typing. Default: true. Type: Boolean.
	<a href="#">AutoPostBack</a>	Sets or retrieves a value that indicates whether or not the control posts back to the server each time a user interacts with the control.
	<a href="#">CallbackDataPopulate</a>	Gets or sets a value that determines which means to populate data for c1combobox(without posting back).
	<a href="#">ClientID</a>	(Inherited from System.Web.UI.Control)
	<a href="#">ClientIDMode</a>	(Inherited from System.Web.UI.Control)
	<a href="#">Columns</a>	Collection of columns in the combobox.
	<a href="#">CommandArgument</a>	
	<a href="#">CommandName</a>	
	<a href="#">Controls</a>	(Inherited from System.Web.UI.Control)
	<a href="#">ControlStyle</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">ControlStyleCreated</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">CssClass</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">DataMember</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)

 <a href="#">DataSelectedField</a>	Gets or sets the field in the data source from which to load item state.
 <a href="#">DataSource</a>	(Inherited from <code>System.Web.UI.WebControls.BaseDataBoundControl</code> )
 <a href="#">DataSourceID</a>	(Inherited from <code>System.Web.UI.WebControls.DataBoundControl</code> )
 <a href="#">DataSourceObject</a>	(Inherited from <code>System.Web.UI.WebControls.DataBoundControl</code> )
 <a href="#">DataTextField</a>	Gets or sets the field in the data source from which to load text values.
 <a href="#">DataTextFormatString</a>	The formatting applied to the text field. For example, "{0:d}".
 <a href="#">DataValueField</a>	Gets or sets the field in the data source from which to load item values.
 <a href="#">Delay</a>	A value that determines the duration (in milliseconds) of the time to delay before autocomplete begins after typing stops. Default: 300. Type: Number.
 <a href="#">DropDownHeight</a>	A value that specifies the height of the drop-down list. Default: 300. Type: Number.
 <a href="#">DropDownListPosition</a>	A value that specifies the position options of the drop-down list
 <a href="#">DropDownWidth</a>	A value that specifies the width of the drop-down list. Default: "-1". Type: Number.
 <a href="#">EnableCallBackMode</a>	Gets or sets a value that determines whether to enable callback to load <a href="#">C1ComboBoxItems</a> on

		demand.
	<a href="#">EnableTheming</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">EnableViewState</a>	(Inherited from System.Web.UI.Control)
	<a href="#">EnsureDropDownOnBody</a>	A value indicating the dropdown element will be append to the body or combobox container. If the value is true, the dropdown list will be appended to body element, else it will append to the combobox container. Default: true. Type: Boolean.
	<a href="#">ForceSelectionText</a>	A value that determines whether to check the input text against the text of the selected item when the focus blurs. Default: false. Type: Boolean.
	<a href="#">HasAttributes</a>	(Inherited from System.Web.UI.WebControls.WebControl)
	<a href="#">Height</a>	Overridden. Gets or sets the Height of the combobox.
	<a href="#">HidingAnimation</a>	A value specifies the animation options for the drop-down list when it is hidden. Default: null. Type: Object.
	<a href="#">HighlightMatching</a>	A value that determines whether to highlight the keywords in an item. If "abc" is typed in the textbox, all "abc" matches are highlighted in the drop-down list. Default: true. Type: Boolean.
	<a href="#">ID</a>	(Inherited from System.Web.UI.Control)
	<a href="#">IsEditable</a>	A value that determines whether input is editable. Default: true. Type: Boolean.

 <a href="#">Items</a>	Collection of child items in the combobox.
 <a href="#">ItemsTemplate</a>	Gets or sets the template of the items.
 <a href="#">ItemType</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)
 <a href="#">LabelText</a>	A value that specifies the text in the wijcombobox label. Default: null. Type: String.
 <a href="#">MinLength</a>	A value that determines the minimum length of text that can be entered in the wijcombobox text box to issue an AJAX request. Default: 4. Type: Number.
 <a href="#">MultipleSelectionSeparator</a>	A value that specifies the separator for the multiple selected items text in the textbox. Default: ",". Type: String.
 <a href="#">NamingContainer</a>	(Inherited from System.Web.UI.Control)
 <a href="#">OnClientChanged</a>	A function called when select item is changed.
 <a href="#">OnClientClose</a>	A function called when drop-down list is closed.
 <a href="#">OnClientOpen</a>	A function called when drop-down list is opened.
 <a href="#">OnClientSearch</a>	A function called before searching the list.
 <a href="#">OnClientSelect</a>	A function called when any item in list is selected.
 <a href="#">OnClientSelectedIndexChanged</a>	A function called after the selected index of the C1ComboBox has changed.
 <a href="#">OnClientSelectedIndexChanging</a>	A function called when the selected index of the C1ComboBox is about to change.
 <a href="#">OnClientTextChanged</a>	A function called when when the Text property is changed.

 <a href="#">Page</a>	(Inherited from System.Web.UI.Control)
 <a href="#">Parent</a>	(Inherited from System.Web.UI.Control)
 <a href="#">RenderingCompatibility</a>	(Inherited from System.Web.UI.Control)
 <a href="#">SelectedIndex</a>	A value that specifies the index of the item to select when using single mode. If the selectionMode is "multiple", then this option could be set to an array of Number which contains the indices of the items to select. Default: -1. Type: Number/Array.
 <a href="#">SelectedIndices</a>	Gets or sets the SelectedIndices of <a href="#">C1ComboBox</a> .
 <a href="#">SelectedItem</a>	Gets the SelectedItem of <a href="#">C1ComboBox</a> .
 <a href="#">SelectedItems</a>	Gets the SelectedItems of <a href="#">C1ComboBox</a> .
 <a href="#">SelectedValue</a>	Gets or sets the SelectedValue of <a href="#">C1ComboBox</a> .
 <a href="#">SelectElementWidthFix</a>	A value added to the width of the target select element to account for the scroll bar width of superpanel. Default: 6. Type: Number. Unit for this value is pixel. Because the width of the scroll bar may be different between browsers if wijcombobox is initialized with the width of the HTML select element, the text may be hidden by the scroll bar of wijcombobox.
 <a href="#">SelectionMode</a>	
 <a href="#">SelectMethod</a>	(Inherited from System.Web.UI.WebControls.DataBoundControl)
 <a href="#">SelectOnItemFocus</a>	A value that determines whether to select the item when the item gains focus or is activated. Default: false. Type: Boolean.

 <a href="#">ShowingAnimation</a>	A value that specifies the animation options for a drop-down list when it is visible. Default: null. Type: Object.
 <a href="#">ShowTrigger</a>	A value that determines whether to show the trigger of wijcombobox. Default: true. Type: Boolean.
 <a href="#">Site</a>	(Inherited from System.Web.UI.Control)
 <a href="#">SkinID</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">Style</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">SupportsDisabledAttribute</a>	(Inherited from System.Web.UI.WebControls.BaseDataBoundControl)
 <a href="#">TabIndex</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">TemplateControl</a>	(Inherited from System.Web.UI.Control)
 <a href="#">TemplateSourceDirectory</a>	(Inherited from System.Web.UI.Control)
 <a href="#">Text</a>	Text in the combobox.
 <a href="#">ToolTip</a>	(Inherited from System.Web.UI.WebControls.WebControl)
 <a href="#">TriggerPosition</a>	A value that specifies the position of the drop-down list trigger. Default: "right". Type: String.
 <a href="#">UniqueID</a>	Overridden. Gets the uniqueID of this control
 <a href="#">ValidateRequestMode</a>	(Inherited from System.Web.UI.Control)
 <a href="#">ViewStateMode</a>	(Inherited from System.Web.UI.Control)

	<b>Width</b>	Overridden. Gets or sets the width of the combobox.

## DropDownHeight Property

A value that specifies the height of the drop-down list. Default: 300. Type: Number.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<LayoutAttribute(LayoutType.Appearance)>
<C1DescriptionAttribute(Key="C1ComboBox.DropDownHeight", Description="Gets or
sets the height of the drop-down list.")>
<WidgetOptionAttribute()>
<C1CategoryAttribute("Appearance")>
Public Property DropdownHeight As System.Integer
```

C#

```
[System.ComponentModel.DefaultValue()]
[Layout(LayoutType.Appearance)]
[C1Description(Key="C1ComboBox.DropDownHeight", Description="Gets or sets the
height of the drop-down list.")]
[WidgetOption()]
[C1Category("Appearance")]
public System.int DropdownHeight {get; set;}
```

## Remarks

If the total height of all items is less than the value of this option, it will use the total height of items as the height of the drop-down list.

## DropDownWidth Property

A value that specifies the width of the drop-down list. Default: "-1". Type: Number.

### Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Appearance")>
<C1DescriptionAttribute(Key="C1ComboBox.DropDownWidth", Description="Gets or
sets the drop-down list width (in pixels). If the value is less than zero,
the width of the C1ComboBox will be used.")>
<System.ComponentModel.DefaultValueAttribute()>
<LayoutAttribute(LayoutType.Appearance)>
<WidgetOptionAttribute()>
Public Property DropdownWidth As System.Integer
```

C#

```
[C1Category("Appearance")]
[C1Description(Key="C1ComboBox.DropDownWidth", Description="Gets or sets the
drop-down list width (in pixels). If the value is less than zero, the width
of the C1ComboBox will be used.")]
[System.ComponentModel.DefaultValue()]
[Layout(LayoutType.Appearance)]
[WidgetOption()]
public System.int DropdownWidth {get; set;}
```

### Remarks

When this option is set to "-1", the width of the drop-down list is equal to the width of wijcombobox.

## ForceSelectionText Property

A value that determines whether to check the input text against the text of the selected item when the focus blurs. Default: false. Type: Boolean.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
<LayoutAttribute(LayoutType.Behavior)>
<WidgetOptionAttribute()>
<C1DescriptionAttribute(Key="C1ComboBox.ForceSelectionText",
```

Description="Gets or sets a value that determines whether arbitrary text can be entered in the C1ComboBox text box.")>  
 Public Property ForceSelectionText As System.Boolean

C#

```
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
[Layout(LayoutType.Behavior)]
[WidgetOption()]
[C1Description(Key="C1ComboBox.ForceSelectionText", Description="Gets or sets
a value that determines whether arbitrary text can be entered in the
C1ComboBox text box.")]
public System.bool ForceSelectionText {get; set;}
```

## Remarks

If the text does not match any item, input text will restore to text the selected item or empty if no item is selected.

## CallbackDataBind Event

Occurs when C1ComboBox requests data from data source.

### Syntax

Visual Basic (Declaration)	
<pre>&lt;C1DescriptionAttribute(Key="C1ComboBox.CallbackDataBind", Description="Gets or sets a value determines whether to fetch more on scrolling to end.")&gt; &lt;C1CategoryAttribute("Misc")&gt; Public Event CallbackDataBind As <a href="#">C1ComboBoxCallbackEventHandler</a></pre>	
C#	
<pre>[C1Description(Key="C1ComboBox.CallbackDataBind", Description="Gets or sets a value determines whether to fetch more on scrolling to end.")] [C1Category("Misc")] public event <a href="#">C1ComboBoxCallbackEventHandler</a> CallbackDataBind</pre>	

### Event Data

The event handler receives an argument of type [C1ComboBoxCallbackEventArgs](#) containing data related to this event. The following **C1ComboBoxCallbackEventArgs** properties provide information specific to this event.

Property	Description
<a href="#">DataSource</a>	Bind the DataSource to C1ComboBox in Callback mode.
<a href="#">FilterText</a>	Gets or sets the FilterText.
<a href="#">PageSize</a>	Gets or sets the PageSize for DataSource.

### Add Method

Adds a new [C1ComboBoxItem](#) to the end of the list.

## Syntax

Visual Basic (Declaration)
<pre>Public Shadows Sub Add( _     ByVal <i>child</i> As <a href="#">C1ComboBoxItem</a> _</pre>

```
)
C#
public new void Add(
    C1ComboBoxItem child
)
```

**Parameters**

*child*

Item to add.

**Example**

- [C#](#)

```
C1ComboBox c = new C1ComboBox();
c.Items.Add(new C1ComboBoxItem("test1"));
c.Items.Add(new C1ComboBoxItem("test2"));
```

**See Also**

**Reference**

[C1ComboBoxItemCollection Class](#)

[C1ComboBoxItemCollection Members](#)

**Clear Method**

Removes all [C1ComboBoxItems](#) from the collection.

**Syntax**

Visual Basic (Declaration)
Public Shadows Sub Clear()
C#
public new void Clear()

**Example**

- [C#](#)

```
C1ComboBox c = new C1ComboBox();
c.Items.Add(new C1ComboBoxItem("test1"));
c.Items.Add(new C1ComboBoxItem("test2"));
// items are clear.
```

```
c.Items.Clear();
```

## Insert Method

### Example

Position where the C1ComboBoxItem will be added. The value should be greater than or equal to 0.

[C1ComboBoxItem](#) instance.

Inserts a [C1ComboBoxItem](#) at the specified position in the collection.

## Syntax

Visual Basic (Declaration)	
<pre>Public Shadows Sub Insert( _     ByVal index As System.Integer, _     ByVal child As C1ComboBoxItem _ )</pre>	
C#	
<pre>public new void Insert(     System.int index,     C1ComboBoxItem child )</pre>	

### Parameters

*index*

Position where the C1ComboBoxItem will be added. The value should be greater than or equal to 0.

*child*

[C1ComboBoxItem](#) instance.

## Example

- [C#](#)

```
C1ComboBox c = new C1ComboBox();
c.Items.Add(new C1ComboBoxItem("test1"));
c.Items.Insert(0, new C1ComboBoxItem("test2"));
```

## See Also

### Remove Method

Removes the specified [C1ComboBoxItem](#) from the list.

### Syntax

Visual Basic (Declaration)	
<pre>Public Shadows Sub Remove( _     ByVal <i>child</i> As C1ComboBoxItem _ )</pre>	
C#	
<pre>public new void Remove(     C1ComboBoxItem <i>child</i> )</pre>	

### Parameters

*child*

[C1ComboBoxItem](#) to remove.

### Example

- [C#](#)

```
C1ComboBox c = new C1ComboBox();
C1ComboBoxItem item = new C1ComboBoxItem("test1")
c.Items.Add(item);
c.Items.Remove(item);
```

## See Also

### Reference

[C1ComboBoxItemCollection Class](#)

## RemoveAt Method

Removes the [C1ComboBoxItem](#) at the specified index from the list.

### Syntax

Visual Basic (Declaration)	
<pre>Public Shadows Sub RemoveAt( _     ByVal index As System.Integer _ )</pre>	
C#	
<pre>public new void RemoveAt(     System.int index )</pre>	

### Parameters

*index*

Index of [C1ComboBoxItem](#) to remove.

### Example

- [C#](#)

```
C1ComboBox c = new C1ComboBox();
c.Items.Add(new C1ComboBoxItem("test1"));
c.Items.RemoveAt(0);
```

### SelectedIndices Property

Gets or sets the selected indices of [C1ComboBox](#).

## Syntax

Visual Basic (Declaration)	
Public Property SelectedIndices As System.Collections.ArrayList	
C#	
public System.Collections.ArrayList SelectedIndices {get; set;}	

## Example

- C#

```
C1ComboBox c = new C1ComboBox();
c.Items.Add(new C1ComboBoxItem("test1"));
c.Items.Add(new C1ComboBoxItem("test2"));
c.SelectionMode = C1ComboBoxSelectionMode.Multiple;
ArrayList indicesToSelect = new ArrayList();
indicesToSelect.Add(0);
indicesToSelect.Add(1);
c.SelectedIndices = indicesToSelect;
```

## Delegates

### C1ComboBoxCallbackEventHandler

The source of the event.

An [C1ComboBoxCallbackEventArgs](#) that contains event data.

Represents the method that will handle [C1ComboBox.CallbackDataBind](#) event.

## Syntax

Visual Basic (Declaration)

```
Public Delegate Sub C1ComboBoxCallbackEventHandler( _
    ByVal sender As System.Object, _
    ByVal args As C1ComboBoxCallbackEventArgs _
)
```

C#

```
public delegate void C1ComboBoxCallbackEventHandler(
    System.object sender,
    C1ComboBoxCallbackEventArgs args
)
```

### Parameters

*sender*

The source of the event.

*args*

An [C1ComboBoxCallbackEventArgs](#) that contains event data.

## See Also

### Reference

[C1ComboBoxCallbackEventHandler Members](#)  
[C1.Web.Wijmo.Controls.C1ComboBox Namespace](#)

## C1ComboBoxEventHandler

The source of the event.

An [C1ComboBoxEventArgs](#) that contains event data.

Represents the method that will handle [C1ComboBox.SelectedIndexChanged](#) event.

### Syntax

Visual Basic (Declaration)	
<pre>Public Delegate Sub C1ComboBoxEventHandler( _     ByVal sender As System.Object, _     ByVal args As C1ComboBoxEventArgs _ )</pre>	
C#	
<pre>public delegate void C1ComboBoxEventHandler(     System.object sender,     C1ComboBoxEventArgs args )</pre>	

### Parameters

*sender*

The source of the event.

*args*

An [C1ComboBoxEventArgs](#) that contains event data.

### See Also

### Reference

[C1ComboBoxEventHandler Members](#)  
[C1.Web.Wijmo.Controls.C1ComboBox Namespace](#)

## C1ComboBoxItemEventHandler

The source of the event.

An [C1ComboBoxItemEventArgs](#) that contains event data.

Represents the method that will handle an data binding events of [C1ComboBox](#). Such as [C1ComboBox.BoundItemCreated](#) event and [C1ComboBox.ItemDataBinding](#) event.

## Syntax

Visual Basic (Declaration)	
<pre>Public Delegate Sub C1ComboBoxItemEventHandler( _     ByVal sender As System.Object, _     ByVal args As C1ComboBoxItemEventArgs _ )</pre>	
C#	
<pre>public delegate void C1ComboBoxItemEventHandler(     System.object sender,     C1ComboBoxItemEventArgs args )</pre>	

## Parameters

*sender*

The source of the event.

*args*

An [C1ComboBoxItemEventArgs](#) that contains event data.

## See Also

## Reference

[C1ComboBoxItemEventHandler Members](#)

[C1.Web.Wijmo.Controls.C1ComboBox Namespace](#)

## C1ComboBoxItemPopulateEventHandler

The source of the event.

An [C1ComboBoxItemPopulateEventArgs](#) that contains event data.

Represents the method that will handle [C1ComboBox.ItemPopulate](#) event.

## Syntax

Visual Basic (Declaration)	
----------------------------	--

```
Public Delegate Sub C1ComboBoxItemPopulateEventHandler( _  
    ByVal sender As System.Object, _  
    ByVal args As C1ComboBoxItemPopulateEventArgs _  
)
```

C#

```
public delegate void C1ComboBoxItemPopulateEventHandler(  
    System.object sender,  
    C1ComboBoxItemPopulateEventArgs args  
)
```

### Parameters

*sender*

The source of the event.

*args*

An [C1ComboBoxItemPopulateEventArgs](#) that contains event data.
