## OnPreRender Method

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(</pre>	

```
System.EventArgs e
)
```

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## ShouldSerializeColumns Method

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class :  
ShouldSerializeColumns Method

Determines whether the Columns should be serialized to client side.

## Syntax

Visual Basic (Declaration)	
Public Function ShouldSerializeColumns() As System.Boolean	
C#	
public System.bool ShouldSerializeColumns()	

### Return Value

Return true if anysubproperty is changed, otherwise return false.

## See Also

## Properties

C1.Web.Wijmo.Extenders.C1ComboBox Namespace : C1ComboBoxExtender Class

For a list of all members of this type, see C1ComboBoxExtender members.

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoComplete	A value that determines whether to start the auto-complete function after typing in the text if a match exists. Default: true. Type: Boolean.
	AutoFilter	A value determines whether to shorten the drop-down list items by matching the text in the textbox after typing. Default: true. Type: Boolean.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Columns	An array that specifies the column collections of wijcombobox. Example: columns: [{name: "header1", width: 150}, {name: "header2", width: 150}, {name: "header3", width: 150}] Default: []. Type: Array.

	Controls	(Inherited from System.Web.UI.Control)
	Data	A value that specifies the underlying data source provider of wijcombobox
	Delay	A value that determines the duration (in milliseconds) of the time to delay before autocomplete begins after typing stops. Default: 300. Type: Number.
	DropDownHeight	A value that specifies the height of the drop-down list. Default: 300. Type: Number.
	DropDownListPosition	A value that specifies the position options of the drop-down list
	DropDownWidth	A value that specifies the width of the drop-down list. Default: "-1". Type: Number.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureDropDownOnBody	A value indicating the dropdown element will be append to the body or combobox container. If the value is true, the dropdown list will be appended to body element, else it will append to the combobox container. Default: true. Type: Boolean.
	ForceSelectionText	A value that determines whether to check the input text against the text of the selected item when the focus blurs. Default: false. Type: Boolean.

	HidingAnimation	A value specifies the animation options for the drop-down list when it is hidden. Default: null. Type: Object.
	HighlightMatching	A value that determines whether to highlight the keywords in an item. If "abc" is typed in the textbox, all "abc" matches are highlighted in the drop-down list. Default: true. Type: Boolean.
	ID	(Inherited from System.Web.UI.Control)
	IsEditable	A value that determines whether input is editable. Default: true. Type: Boolean.
	LabelText	A value that specifies the text in the wijcombobox label. Default: null. Type: String.
	ListOptions	The object contains the options of wijlist
	MinLength	A value that determines the minimum length of text that can be entered in the wijcombobox text box to issue an AJAX request. Default: 4. Type: Number.
	MultipleSelectionSeparator	A value that specifies the separator for the multiple selected items text in the textbox. Default: ",". Type: String.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientChanged	A function called when select item is changed.
	OnClientClose	A function called when drop-down list is closed.
	OnClientOpen	A function called when drop-down list is opened.
	OnClientSearch	A function called before searching the list.

	OnClientSelect	A function called when any item in list is selected.
	OnClientSelectedIndexChanged	A function called after the selected index of the C1ComboBox has changed.
	OnClientSelectedIndexChanging	A function called when the selected index of the C1ComboBox is about to change.
	OnClientTextChanged	A function called when when the Text property is changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SelectedIndex	A value that specifies the index of the item to select when using single mode. If the selectionMode is "multiple", then this option could be set to an array of Number which contains the indices of the items to select. Default: -1. Type: Number/Array.
	SelectedValue	Gets or sets the SelectedValue of C1.Web.Wijmo.Extenders.C1ComboBox.
	SelectElementWidthFix	A value added to the width of the target select element to account for the scroll bar width of superpanel. Default: 6. Type: Number. Unit for this value is pixel. Because the width of the scroll bar may be different between browsers if wijcombobox is initialized with the width of the HTML select element, the text may be hidden by the scroll bar of wijcombobox.
	SelectionMode	

	SelectOnItemFocus	A value that determines whether to select the item when the item gains focus or is activated. Default: false. Type: Boolean.
	ShowingAnimation	A value that specifies the animation options for a drop-down list when it is visible. Default: null. Type: Object.
	ShowTrigger	A value that determines whether to show the trigger of wijcombobox. Default: true. Type: Boolean.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TriggerPosition	A value that specifies the position of the drop-down list trigger. Default: "right". Type: String.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Columns Property

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class : Columns Property

An array that specifies the column collections of wijcombobox. Example: columns: [{name: "header1", width: 150}, {name: "header2", width: 150}, {name: "header3", width: 150}] Default: [].  
Type: Array.

## Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("Collection of columns in the combobox.")>
<WidgetOptionAttribute()>
<C1CategoryAttribute("Data")>
<System.Web.UI.PersistenceModeAttribute(PersistenceMode.InnerProperty)>
Public ReadOnly Property Columns As System.Collections.Generic.List(Of
C1ComboBoxColumn)
```

C#

```
[C1Description("Collection of columns in the combobox.")]
[WidgetOption()]
[C1Category("Data")]
[System.Web.UI.PersistenceMode(PersistenceMode.InnerProperty)]
public System.Collections.Generic.List<C1ComboBoxColumn> Columns {get;}
```

## See Also

## Data Property

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class : Data Property

A value that specifies the underlying data source provider of wijcombobox

## Syntax

### Visual Basic (Declaration)

```
<WidgetOptionAttribute(>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<C1DescriptionAttribute("A value that specifies the underlying data source
provider of wijcombobox.")>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeriali
zationVisibility.Content)>
<C1CategoryAttribute("Data")>
<System.Web.UI.PersistenceModeAttribute(PersistenceMode.InnerProperty)>
<System.ComponentModel.TypeConverterAttribute("System.ComponentModel.Expandab
leObjectConverter, System, Version=4.0.0.0, Culture=neutral,
PublicKeyToken=b77a5c561934e089")>
Public Property Data As DataSourceOption
```

### C#

```
[WidgetOption()]
[System.ComponentModel.NotifyParentProperty(true)]
[C1Description("A value that specifies the underlying data source
provider of wijcombobox.")]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializat
ionVisibility.Content)]
[C1Category("Data")]
[System.Web.UI.PersistenceMode(PersistenceMode.InnerProperty)]
[System.ComponentModel.TypeConverter("System.ComponentModel.ExpandableObj
ectConverter, System, Version=4.0.0.0, Culture=neutral,
PublicKeyToken=b77a5c561934e089")]
public DataSourceOption Data {get; set;}
```

## See Also

## Delay Property

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class : Delay Property

A value that determines the duration (in milliseconds) of the time to delay before autocomplete begins after typing stops. Default: 300. Type: Number.

## Syntax

### Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<C1DescriptionAttribute("Gets or sets the time delay before auto completion
starts (in milliseconds).")>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
Public Property Delay As System.Integer
```

### C#

```
[WidgetOption()]
[C1Description("Gets or sets the time delay before auto completion starts (in
milliseconds).")]
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
public System.int Delay {get; set;}
```

## See Also

### Reference

C1ComboBoxExtender Class

C1ComboBoxExtender Members

## DropDownHeight Property

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class : DropdownHeight Property

A value that specifies the height of the drop-down list. Default: 300. Type: Number.

## Syntax

### Visual Basic (Declaration)

```
<C1DescriptionAttribute("Gets or sets the height of the drop-down list.")>
<WidgetOptionAttribute()>
```

```
<C1CategoryAttribute("Appearance")>
<System.ComponentModel.DefaultValueAttribute()>
Public Property DropdownHeight As System.Integer
```

C#

```
[C1Description("Gets or sets the height of the drop-down list.")]
[WidgetOption()]
[C1Category("Appearance")]
[System.ComponentModel.DefaultValue()]
public System.int DropdownHeight {get; set;}
```

## Remarks

If the total height of all items is less than the value of this option, it will use the total height of items as the height of the drop-down list.

## EnsureDropDownOnBody Property

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class :

EnsureDropDownOnBody Property

A value indicating the dropdown element will be append to the body or combobox container. If the value is true, the dropdown list will be appended to body element, else it will append to the combobox container. Default: true. Type: Boolean.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<WidgetOptionAttribute()>
<C1DescriptionAttribute("C1ComboBox.EnsureDropDownOnBody")>
<C1CategoryAttribute("Behavior")>
Public Property EnsureDropDownOnBody As System.Boolean
```

C#

```
[System.ComponentModel.DefaultValue()]
[WidgetOption()]
[C1Description("C1ComboBox.EnsureDropDownOnBody")]
[C1Category("Behavior")]
public System.bool EnsureDropDownOnBody {get; set;}
```

## ForceSelectionText Property

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class : ForceSelectionText Property

A value that determines whether to check the input text against the text of the selected item when the focus blurs. Default: false. Type: Boolean.

## Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<C1DescriptionAttribute("Gets or sets a value that determines whether
arbitrary text can be entered in the C1ComboBox text box.")>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
Public Property ForceSelectionText As System.Boolean
```

C#

```
[WidgetOption()]
[C1Description("Gets or sets a value that determines whether arbitrary text
can be entered in the C1ComboBox text box.")]
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
public System.bool ForceSelectionText {get; set;}
```

## Remarks

If the text does not match any item, input text will restore to text the selected item or empty if no item is selected.

## SelectedIndex Property

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxExtender Class : SelectedIndex Property

A value that specifies the index of the item to select when using single mode. If the selectionMode is "multiple", then this option could be set to an array of Number which contains the indices of the items to select. Default: -1. Type: Number/Array.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
<WidgetOptionAttribute()>
<C1DescriptionAttribute("A value that specifies the index of the item to
select when using single mode.")>
<System.ComponentModel.DefaultValueAttribute()>
Public Property SelectedIndex As System.Integer
```

C#

```
[C1Category("Behavior")]
[WidgetOption()]
[C1Description("A value that specifies the index of the item to select when
using single mode.")]
[System.ComponentModel.DefaultValue()]
public System.int SelectedIndex {get; set;}
```

## Remarks

If no item is selected, it will return -1.

### C1ComboBoxItem Constructor(String,String)

C1.Web.Wijmo.Extenders.C1ComboBox Namespace > C1ComboBoxItem Class > C1ComboBoxItem Constructor : C1ComboBoxItem Constructor(String,String)

**ComboBoxItem** Text.

**ComboBoxItem** Value.

Initializes a new instance of the **ComboBoxItem** class.

### Syntax

Visual Basic (Declaration)	
<pre>Public Function New( _     ByVal text As System.String, _     ByVal value As System.String _ )</pre>	
C#	
<pre>public C1ComboBoxItem(     System.string text,     System.string value</pre>	

)

## Parameters

*text*

**ComboBoxItem** Text.

*value*

**ComboBoxItem** Value.

## Public Constructors

	Name	Description
	C1DataSource Constructor	

[Top](#)

## Protected Fields

	Name	Description
	IsDesignMode	Gets a value indicating whether a control is being used on a design surface. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)

[Top](#)

## Public Properties

	Name	Description
	AccessKey	(Inherited from System.Web.UI.WebControls.WebControl)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Attributes	(Inherited from System.Web.UI.WebControls.WebControl)
	BackColor	(Inherited from

		System.Web.UI.WebControls.WebControl)
	BorderColor	(Inherited from System.Web.UI.WebControls.WebControl)
	BorderStyle	(Inherited from System.Web.UI.WebControls.WebControl)
	BorderWidth	(Inherited from System.Web.UI.WebControls.WebControl)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	ControlStyle	(Inherited from System.Web.UI.WebControls.WebControl)
	ControlStyleCreated	(Inherited from System.Web.UI.WebControls.WebControl)
	CssClass	(Inherited from System.Web.UI.WebControls.WebControl)
	Data	The data to process using the wijdatasource class. The value can be the reference of the data or the data itself in client side.
	Enabled	(Inherited from System.Web.UI.WebControls.WebControl)
	EnableTheming	(Inherited from

		System.Web.UI.WebControls.WebControl)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Font	(Inherited from System.Web.UI.WebControls.WebControl)
	ForeColor	(Inherited from System.Web.UI.WebControls.WebControl)
	HasAttributes	(Inherited from System.Web.UI.WebControls.WebControl)
	Height	(Inherited from System.Web.UI.WebControls.WebControl)
	ID	(Inherited from System.Web.UI.Control)
	InnerStates	When control has an javascript function type property, get the property names. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientLoaded	Function called after loading. The value can be the reference of the function or the function itself in client side.
	OnClientLoading	Function called before loading process starts The value can be the reference of the function or the function itself in client side.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Proxy	The proxy to use with wijdatasource. The wijdatasource class will call the proxy object's

		request method. In the proxy object, you can send a request to a remote server to obtain data with the ajax options object provided. Then you can use the wijdatasource reader to process the raw data in the call.
	Reader	The reader to use with wijdatasource. The wijdatasource class will call the read method of reader to read from rawdata with an array of fields provided. The field contains a name, mapping and defaultValue properties which define the rule of the mapping. If no reader is configured with wijdatasource it will directly return the raw data.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.WebControls.WebControl)
	Style	(Inherited from System.Web.UI.WebControls.WebControl)
	SupportsDisabledAttribute	(Inherited from System.Web.UI.WebControls.WebControl)
	TabIndex	(Inherited from System.Web.UI.WebControls.WebControl)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make

		sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	ToolTip	(Inherited from System.Web.UI.WebControls.WebControl)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Visible	(Inherited from System.Web.UI.Control)
	Width	(Inherited from System.Web.UI.WebControls.WebControl)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)

	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	Extender	Overridden.
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	TagKey	(Inherited from System.Web.UI.WebControls.WebControl)
	TagName	(Inherited from System.Web.UI.WebControls.WebControl)
	ViewState	(Inherited from System.Web.UI.Control)

	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateChildControls	Called by the ASP.NET page framework to notify server

		controls that use composition-based implementation to create any child controls they contain in preparation for posting back or rendering. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
🍷💎	CreateControlCollection	(Inherited from System.Web.UI.Control)
🍷💎	CreateControlStyle	(Inherited from System.Web.UI.WebControls.WebControl)
🍷💎	DataBindChildren	(Inherited from System.Web.UI.Control)
🍷💎	EnsureChildControls	(Inherited from System.Web.UI.Control)
🍷💎	EnsureID	(Inherited from System.Web.UI.Control)
🍷💎	GetDesignModeState	(Inherited from System.Web.UI.Control)
🍷💎	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
🍷💎	HasEvents	(Inherited from System.Web.UI.Control)
🍷💎	IsLiteralContent	(Inherited from System.Web.UI.Control)
🍷💎	LoadViewState	(Inherited from System.Web.UI.WebControls.WebControl)
🍷💎	OnBubbleEvent	(Inherited from System.Web.UI.Control)
🍷💎	OnDataBinding	(Inherited from System.Web.UI.Control)
🍷💎	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
🍷💎	Render	Overridden.
🍷💎	ResolveAdapter	(Inherited from System.Web.UI.Control)
🍷💎	SaveViewState	(Inherited from System.Web.UI.WebControls.WebControl)

	SetDesignModeState	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	TrackViewState	(Inherited from System.Web.UI.WebControls.WebControl)

### Public Properties

	Name	Description
	AccessKey	(Inherited from System.Web.UI.WebControls.WebControl)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Attributes	(Inherited from System.Web.UI.WebControls.WebControl)
	BackColor	(Inherited from System.Web.UI.WebControls.WebControl)
	BorderColor	(Inherited from System.Web.UI.WebControls.WebControl)
	BorderStyle	(Inherited from System.Web.UI.WebControls.WebControl)
	BorderWidth	(Inherited from System.Web.UI.WebControls.WebControl)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	ControlStyle	(Inherited from

		System.Web.UI.WebControls.WebControl)
	ControlStyleCreated	(Inherited from System.Web.UI.WebControls.WebControl)
	CssClass	(Inherited from System.Web.UI.WebControls.WebControl)
	Data	The data to process using the wijdatasource class. The value can be the reference of the data or the data itself in client side.
	Enabled	(Inherited from System.Web.UI.WebControls.WebControl)
	EnableTheming	(Inherited from System.Web.UI.WebControls.WebControl)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Font	(Inherited from System.Web.UI.WebControls.WebControl)
	ForeColor	(Inherited from System.Web.UI.WebControls.WebControl)
	HasAttributes	(Inherited from System.Web.UI.WebControls.WebControl)
	Height	(Inherited from System.Web.UI.WebControls.WebControl)
	ID	(Inherited from System.Web.UI.Control)
	InnerStates	When control has an javascript function type property, get the property names. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)

	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientLoaded	Function called after loading. The value can be the reference of the function or the function itself in client side.
	OnClientLoading	Function called before loading process starts The value can be the reference of the function or the function itself in client side.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Proxy	The proxy to use with wijdatasource. The wijdatasource class will call the proxy object's request method. In the proxy object, you can send a request to a remote server to obtain data with the ajaxs options object provided. Then you can use the wijdatasource reader to process the raw data in the call.
	Reader	The reader to use with wijdatasource. The wijdatasource class will call the read method of reader to read from rawdata with an array of fields provided. The field contains a name, mapping and defaultValue properties which define the rule of the mapping. If no reader is configured with wijdatasource it will directly return the raw data.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.WebControls.WebControl)

	Style	(Inherited from System.Web.UI.WebControls.WebControl)
	SupportsDisabledAttribute	(Inherited from System.Web.UI.WebControls.WebControl)
	TabIndex	(Inherited from System.Web.UI.WebControls.WebControl)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	ToolTip	(Inherited from System.Web.UI.WebControls.WebControl)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Visible	(Inherited from System.Web.UI.Control)

	Width	(Inherited from System.Web.UI.WebControls.WebControl)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.TargetControlBase)

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	Extender	Overridden.
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	TagKey	(Inherited from System.Web.UI.WebControls.WebControl)
	TagName	(Inherited from System.Web.UI.WebControls.WebControl)
	ViewState	(Inherited from System.Web.UI.Control)

## Proxy Property

C1.Web.Wijmo.Extenders.C1DataSource Namespace > C1DataSource Class : Proxy Property

The proxy to use with wijdatasource. The wijdatasource class will call the proxy object's request method. In the proxy object, you can send a request to a remote server to obtain data with the ajax options object provided. Then you can use the wijdatasource reader to process the raw data in the call.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSerializationVisibility.Content)>
<System.Web.UI.PersistencemodeAttribute(Persistencemode.InnerProperty)>
<WidgetOptionAttribute()>
Public Property Proxy As HttpProxy
```

C#

```
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationVisibility.Content)]
[System.Web.UI.Persistencemode(Persistencemode.InnerProperty)]
[WidgetOption()]
public HttpProxy Proxy {get; set;}
```

## Public Constructors

	Name	Description
	C1DataSourceExtender Constructor	

[Top](#)

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Data	The data to process using the wijdatasource class. The value can be the reference of the data or the data itself in client side.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	InstanceName	The wijdatasource widget instance name in client side.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientLoaded	Function called after loading. The value can be the reference of the function or the function itself in client side.
	OnClientLoading	Function called before loading process starts The value can be the reference of the function or the function itself in client side.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Proxy	The proxy to use with wijdatasource. The wijdatasource class will call the proxy object's request method. In the proxy object, you can send a request to a remote server to obtain data with the ajax options object provided. Then you can use the wijdatasource reader to process the raw data in the call.
	Reader	The reader to use with wijdatasource. The wijdatasource class will call the read method of reader to read from rawdata with an array of fields provided. The field contains a name, mapping and defaultValue properties which define the rule of the mapping. If no reader is configured with

		wijdatasource it will directly return the raw data.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)

C1.Web.Wijmo.Extenders.C1DataSource Namespace

## Render Method

C1.Web.Wijmo.Extenders.C1DataSource Namespace > C1DataSourceExtender Class : Render Method

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub Render( _     ByVal <i>writer</i> As System.Web.UI.HtmlTextWriter _ )</pre>	
C#	

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

## Properties

C1.Web.Wijmo.Extenders.C1DataSource Namespace : C1DataSourceExtender Class

For a list of all members of this type, see C1DataSourceExtender members.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)

	Data	The data to process using the wijdatasource class. The value can be the reference of the data or the data itself in client side.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	InstanceName	The wijdatasource widget instance name in client side.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientLoaded	Function called after loading. The value can be the reference of the function or the function itself in client side.
	OnClientLoading	Function called before loading process starts The value can be the reference of the function or the function itself in client side.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Proxy	The proxy to use with wijdatasource. The wijdatasource class will call the proxy object's request method. In the proxy object, you can send a request to a remote server to obtain data with the ajaxs options object provided. Then you can use the

		wijdatasource reader to process the raw data in the call.
	Reader	The reader to use with wijdatasource. The wijdatasource class will call the read method of reader to read from rawdata with an array of fields provided. The field contains a name, mapping and defaultValue properties which define the rule of the mapping. If no reader is configured with wijdatasource it will directly return the raw data.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Public Constructors

	Name	Description
	C1DialogExtender Constructor	

Top

## Public Properties

	Name	Description
	AppendTo	A jQuery selector that indicate which element the dialog (and overlay, if modal) should be appended to.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Buttons	Gets or sets which buttons should be displayed on the dialog.
	CaptionButtons	Specifies visibility, click event, and icon for the caption buttons on the dialog.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CloseOnEscape	Specifies whether the dialog should close when it has focus and the user presses the escape (ESC) key.
	CloseText	Specifies the text for the close button. Note that the close text is visibly hidden when using a standard theme.
	CollapsingAnimation	A value determines the settings of the animation

		effect to be used when the wijdialog is collapsed.
	ContentUrl	A URL string specifies the URL for the iframe element inside wijdialog.
	Controls	(Inherited from System.Web.UI.Control)
	Draggable	If set to true, the dialog will be draggable by the titlebar.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ExpandingAnimation	A value determines the settings of the animation effect to be used when the wijdialog is expanded.
	Height	The height of the dialog, in pixels.
	Hide	The effect to be used when the dialog is closed.
	ID	(Inherited from System.Web.UI.Control)
	MaxHeight	The maximum height to which the dialog can be resized, in pixels.
	MaxWidth	The maximum width to which the dialog can be resized, in pixels.
	MinHeight	The minimum height to which the dialog can be resized, in pixels.

	MinWidth	The minimum width to which the dialog can be resized, in pixels.
	Modal	If set to true, the dialog will have modal behavior; other items on the page will be disabled (i.e. cannot be interacted with). Modal dialogs create an overlay below the dialog but above other page elements.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeClose	The name of the function which will be called before close.
	OnClientClose	The name of the function which will be called when the dialog is closed.
	OnClientCreate	The name of the function which will be called when the dialog is created.
	OnClientDrag	The name of the function which will be called when dialog is dragged.
	OnClientDragStart	The name of the function which will be called when dialog begin to be dragged.
	OnClientDragStop	The name of the function which will be called after the dialog has been dragged.
	OnClientFocus	The name of the function which will be called when dialog is focused.
	OnClientOpen	The name of the function which will be called when dialog is opened.
	OnClientResize	The name of the function which will be called when the dialog is resized.

	OnClientResizeStart	The name of the function which will be called when the dialog begin to be resized.
	OnClientResizeStop	The name of the function which will be called after the dialog has been resized.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Position	Specifies where the dialog should be displayed. Possible values: 1) a single string representing position within viewport: 'center', 'left', 'right', 'top', 'bottom'. 2) a string with array format containing an x,y coordinate pair in pixel offset from left, top corner of viewport (e.g. "[350,100]") 3) a string with array format containing x,y position string values (e.g. "['right','top']" for top right corner).
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Resizable	If set to true, the dialog will be resizable.
	Show	The effect to be used when the dialog is opened.
	ShowOnLoad	When autoOpen is true the dialog will open automatically when dialog is called.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Stack	Specifies whether the dialog will stack on top of other dialogs. This will cause the dialog to move to the front of other dialogs when it gains focus.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)

	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	Title	The Title of the Dialog.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

		)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	The width of the dialog, in pixels.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ZIndex	The starting z-index for the dialog.

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)

	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

Top

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)

	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

[Top](#)

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)

	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

[Top](#)

### Public Properties

	Name	Description
	AppendTo	A jQuery selector that indicate which element the dialog (and overlay, if modal) should be appended to.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Buttons	Gets or sets which buttons should be displayed on the dialog.
	CaptionButtons	Specifies visibility, click event, and icon for the caption buttons on the dialog.

	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CloseOnEscape	Specifies whether the dialog should close when it has focus and the user presses the escape (ESC) key.
	CloseText	Specifies the text for the close button. Note that the close text is visibly hidden when using a standard theme.
	CollapsingAnimation	A value determines the settings of the animation effect to be used when the wijdialog is collapsed.
	ContentUrl	A URL string specifies the URL for the iframe element inside wijdialog.
	Controls	(Inherited from System.Web.UI.Control)
	Draggable	If set to true, the dialog will be draggable by the titlebar.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ExpandingAnimation	A value determines the settings of the animation effect to be used when the wijdialog is expanded.
	Height	The height of the dialog, in pixels.
	Hide	The effect to be used when the dialog is closed.
	ID	(Inherited from System.Web.UI.Control)
	MaxHeight	The maximum height to which the dialog can be resized, in pixels.
	MaxWidth	The maximum width to which the dialog can be resized, in pixels.
	MinHeight	The minimum height to which the dialog can be resized, in pixels.
	MinWidth	The minimum width to which the dialog can be resized, in pixels.
	Modal	If set to true, the dialog will have modal behavior; other items on the page will be disabled (i.e. cannot be interacted with). Modal dialogs create an overlay below the dialog but above other page elements.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeClose	The name of the function which will be called before close.
	OnClientClose	The name of the function which will be called when the dialog is closed.

	OnClientCreate	The name of the function which will be called when the dialog is created.
	OnClientDrag	The name of the function which will be called when dialog is dragged.
	OnClientDragStart	The name of the function which will be called when dialog begin to be dragged.
	OnClientDragStop	The name of the function which will be called after the dialog has been dragged.
	OnClientFocus	The name of the function which will be called when dialog is focused.
	OnClientOpen	The name of the function which will be called when dialog is opened.
	OnClientResize	The name of the function which will be called when the dialog is resized.
	OnClientResizeStart	The name of the function which will be called when the dialog begin to be resized.
	OnClientResizeStop	The name of the function which will be called after the dialog has been resized.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Position	Specifies where the dialog should be displayed. Possible values: 1) a single string representing position within viewport: 'center', 'left', 'right', 'top', 'bottom'. 2) a string with array format containing an x,y coordinate pair in pixel offset from left, top corner of viewport (e.g. "[350,100]") 3) a string with array format containing x,y position string values (e.g.

		"['right','top']" for top right corner).
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Resizable	If set to true, the dialog will be resizable.
	Show	The effect to be used when the dialog is opened.
	ShowOnLoad	When autoOpen is true the dialog will open automatically when dialog is called.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Stack	Specifies whether the dialog will stack on top of other dialogs. This will cause the dialog to move to the front of other dialogs when it gains focus.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.

		(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	Title	The Title of the Dialog.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	The width of the dialog, in pixels.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	ZIndex	The starting z-index for the dialog.

## AppendTo Property

C1.Web.Wijmo.Extenders.C1Dialog Namespace > C1DialogExtender Class : AppendTo Property

A jQuery selector that indicate which element the dialog (and overlay, if modal) should be appended to.

### Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<C1DescriptionAttribute("A jQuery selector that indicate which element the
dialog (and overlay, if modal) should be appended to.")>
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Behavior")>
Public Property AppendTo As System.String
```

C#

```
[WidgetOption()]
[C1Description("A jQuery selector that indicate which element the dialog (and
overlay, if modal) should be appended to.")]
[System.ComponentModel.DefaultValue()]
[C1Category("Behavior")]
public System.string AppendTo {get; set;}
```

## ZIndex Property

C1.Web.Wijmo.Extenders.C1Dialog Namespace > C1DialogExtender Class : ZIndex Property

The starting z-index for the dialog.

### Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("The starting z-index for the dialog.")>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
```

```
<C1CategoryAttribute("Behavior")>
Public Property ZIndex As System.Integer
```

C#

```
[C1Description("The starting z-index for the dialog.")]
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[C1Category("Behavior")]
public System.int ZIndex {get; set;}
```

# C1.Web.Wijmo.Extenders.C1Editor Namespace

## Overview

### Classes

	Class	Description
	C1EditorExtender	Editor for the editor widget.
	FontOption	A class used for customizing the fontSize and fontName.

### Enumerations

	Enumeration	Description
--	-------------	-------------

	EditorMode	Represents editor mode (WYSIWYG/Code/Split).
	Mode	An enum value represents the mode of the C1Editor.

C1.Web.Wijmo.Extenders.C1Editor Namespace : C1EditorExtender Class

The following tables list the members exposed by C1EditorExtender.

## Public Constructors

	Name	Description
	C1EditorExtender Constructor	Creates a new instance of the C1Editor class.

[Top](#)

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	CustomContextMenu	Determine if the custom context menu should be shown.
	CustomFontNames	The FontNames property specifies the list of font name which will be shown in the font name drop down list.

	CustomFontSizes	The FontSizes property specifies the list of font size which will be shown in the font size drop down list.
	DefaultFontName	The DefaultFontName property specifies the default font name in the editor.
	DefaultFontSize	The DefaultFontSize property specifies the default font size in the editor.
	EditorMode	Editor mode (WYSIWYG/Code/Split).
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FontNames	The FontNames property specifies the list of font name which will be shown in the font name drop down list.
	FontSizes	The FontSizes property specifies the list of font size which will be shown in the font size drop down list.
	FullScreenMode	Full screen mode. Set this property to true if you want to switch editor to FullScreen Mode. All client area of the page will be covered by WebEditor.
	FullScreenModeContainerID	Full screen mode container ID. Use this property to specify container which will be used as the parent control for FullScreenMode instead of client's area on the web page.

	ID	(Inherited from System.Web.UI.Control)
	Mode	An enum value represents the mode of the C1Editor.
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowFooter	Show the footer.
	ShowPathSelector	Show the path selector.
	SimpleModeCommands	The SimpleModeCommands property indicates the commands for the simple C1Editor.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)

	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI

		or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
--	--	----------------------------------------------------------------------------------

# C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace

## Overview

### Classes

	Class	Description
	C1CalendarStorage	Allows binding to DataSource and mapping DataSource's fields to Calendar's properties.
	C1CalendarStorageMappings	C1CalendarStorage mappings configuration.
	C1EventCollection	Represents C1Event object collection.
	C1EventsCalendarExtender	Extender for the eventscalendar widget.
	C1EventsCalendarStorage	The C1EventsCalendarStorage defines data storage configuration.
	C1EventsCalendarXmlExchanger	Allows import/export events data to/from XML.
	C1EventStorage	Allows binding to DataSource and mapping DataSource's fields to Event's properties.
	C1EventStorageMappings	C1EventStorage mappings configuration.

	C1MappingsBase	Represents a collection of mappings for properties to the appropriate data fields. Names of properties are keys in this collection.
	DatePagerLocalizationOption	Date pager localization strings.
	DayHeaderFormatConverter	Provides a type converter to convert day header format to and from other representations.
	DayViewHeaderFormatOption	Format of the text for the day header in the day/week or list view.
	Event	The Event object is a meeting, a one-time event, or a recurring event or meeting in the C1EventsCalendar. The Event class includes properties that specify meeting details such as the location and time.
	EventTitleFormatConverter	Provides a type converter to convert an event title format to and from other representations.
	FirstRowDayHeaderFormatConverter	Provides a type converter to convert first row day header format to and from other representations.
	LocalizationOption	Localization strings.
	MappingInfo	Information about mapping.
	RecurrencePattern	Represents the recurrence attributes of an event. Only master events can have this field (recurrenceState is "master").
	TimeRulerFormatConverter	Provides a type converter to convert time ruler format to and from other representations.
	View	The view can be added to C1EventsCalendar's Views.

## Enumerations

	Enumeration	Description
	C1EventsCalendarCustomViewUnit	Specifies the unit of the calendar custom view.
	C1EventsCalendarViewType	Specifies the type of the calendar view.
	FileFormatEnum	Specifies the format of the exported or imported file.
	RecurrencePattern.RecurrenceTypeEnum	Determines the types of recurrent appointments.
	RecurrencePattern.WeekDaysEnum	Determines the set of days and groups of days for recurrence patterns.
	RecurrencePattern.WeekOfMonthEnum	Determines the week in a month in which the appointment will occur.

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace : C1EventsCalendarExtender Class

Extender for the eventscalendar widget.

## Object Model

C1EventsCalendarExtender

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.LicenseProviderAttribute()>
<WidgetDependenciesAttribute(System.Object[])>
<System.Drawing.ToolboxBitmapAttribute()>
<System.Web.UI.TargetControlTypeAttribute(System.Web.UI.WebControls.Panel)>
Public Class C1EventsCalendarExtender
 Inherits C1.Web.Wijmo.Extenders.WidgetExtenderControlBase
 Implements
C1.Web.Wijmo.Extenders.Base.IC1Extender, C1.Web.Wijmo.Extenders.IWijmoWidgetD
ependenciesSupport, C1.Web.Wijmo.Extenders.IWijmoWidgetSupport
```

C#

```
[System.ComponentModel.LicenseProvider()]
[WidgetDependencies(System.Object[])]
[System.Drawing.ToolboxBitmap()]
[System.Web.UI.TargetControlType(System.Web.UI.WebControls.Panel)]
public class C1EventsCalendarExtender :
C1.Web.Wijmo.Extenders.WidgetExtenderControlBase,
C1.Web.Wijmo.Extenders.Base.IC1Extender, C1.Web.Wijmo.Extenders.IWijmoWidgetD
ependenciesSupport, C1.Web.Wijmo.Extenders.IWijmoWidgetSupport
```

## Inheritance Hierarchy

```

System.Object
 System.Web.UI.Control
 System.Web.UI.ExtenderControl
 C1.Web.Wijmo.Extenders.WidgetExtenderControlBase
 C1.Web.Wijmo.Extenders.C1EventsCalendar.C1EventsCalendarExtender

```

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace : C1EventsCalendarExtender Class

The following tables list the members exposed by C1EventsCalendarExtender.

### Public Constructors

	Name	Description
	C1EventsCalendarExtender Constructor	Initializes a new instance of the C1ExpanderExtender class.

[Top](#)

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Colors	The colors property specifies the list of color names which will be shown in the color name drop down list.
	Controls	(Inherited from System.Web.UI.Control)
	Culture	CultureInfo object. Each culture has different conventions for displaying dates, time, numbers, and other information. Neutrals cultures are not supported.
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property.
	DataStorage	C1EventsCalendar storage configuration.
	DatePagerLocalization	Use the Localization property in order to customize localization strings.
	DayHeaderFormat	Format of the text for the day cell header in the month view. Format argument: {0} = Day date.
	DayViewHeaderFormat	Format of the text for the day header in the day/week or list view. Format argument: {0} = Day date.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	EnableLogs	Enables built-in log console.
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureEventDialogOnBody	Indicating the event dialog element will be append to the body or eventcalendar container.
	EventTitleFormat	Format of the title text for the event. Format arguments: {0} = Start, {1} = End, {2} = Subject, {3} = Location, {4} = Icons.
	FirstRowDayHeaderFormat	Format of the text for the first cell header in the first row of the month view. Format argument: {0} = Day date.
	HeaderBarVisible	Indicates whether the header bar will be visible.
	ID	(Inherited from System.Web.UI.Control)
	Localization	Use the Localization property in order to customize localization strings.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NavigationBarVisible	Indicates whether the bottom navigation bar will be visible.
	OnClientBeforeAddEvent	Occurs before the add event action. Return false or call event.preventDefault() in order to cancel event and prevent the save action. args.data - the new event data that should be added to a data source.
	OnClientBeforeDeleteCalendar	Occurs before the delete calendar action. Return false or call event.preventDefault() in order to cancel event

		and prevent the delete action. args.data - the calendar data that should be deleted from a data source.
	OnClientBeforeDeleteEvent	Occurs before the delete action. Return false or call event.preventDefault() in order to cancel event and prevent the delete action. args.data - the event object that should be deleted.
	OnClientBeforeEditEventDialogShow	Occurs before the built-in event dialog is shown. Return false or call event.preventDefault() in order to cancel event and prevent the built-in dialog to be shown. args.data - the event data. args.targetCell - target offset DOM element which can be used for popup callout.
	OnClientBeforeSaveCalendar	Occurs before the save calendar action. Return false or call event.preventDefault() in order to cancel event and prevent the save action. args.data - the new calendar data that should be saved to a data source. args.prevData - previous calendar data, this argument is empty for a new calendar.
	OnClientBeforeUpdateEvent	Occurs before the update event action. Return false or call event.preventDefault() in order to cancel event and prevent the save action. args.data - the new event data that should be updated. args.prevData - previous event data, this argument is empty for a new event.
	OnClientCalendarsChanged	Occurs when calendars option has been changed. args.calendars - the new calendars option value.
	OnClientEventCreating	Occurs when event markup is creating. args.data - the event data. args.eventTemplate The template of events displayed on the view.

	OnClientInitialized	Occurs when events calendar is constructed and events data is loaded from an external or local data source.
	OnClientSelectedDatesChanged	Occurs when selectedDates option has been changed. args.selectedDates - the new selectedDates value.
	OnClientViewTypeChanged	Occurs when viewType option has been changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SelectedDate	The selected date.
	SelectedDates	Collection of DateTime objects that represent the selected dates on the C1EventsCalendar control for the DayView.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)

	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TimeInterval	Time interval for the Day view (in minutes).
	TimeIntervalHeight	The Day view time interval row height in pixels.
	TimeRulerFormat	Time ruler format for the Day view. Format argument: {0} = Current ruler time.
	TimeRulerInterval	Time ruler interval for the Day view (in minutes).
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)

	Views	List of the views which need to be shown. Both default views("day", "week", "month", "list") and custom views can be added. If add a default view, only Type property of View should be set. If add a custom view, All the properties of View should be set.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	VisibleCalendars	Array of the calendar names which need to be shown.
	WebServiceUrl	The URL to the web service which will be used to store information about events.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)

	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	Overridden. Gets the name of the widget.

Top

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. Overridden. Searches the current naming container for a server control with the specified <b>id</b> parameter.
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
🔗	HasControls	(Inherited from System.Web.UI.Control)
🔗	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	ResolveClientUrl	(Inherited from System.Web.UI.Control)
🔗	ResolveUrl	(Inherited from System.Web.UI.Control)
🔗	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
🔗	AddParsedSubObject	(Inherited from System.Web.UI.Control)
🔗	BuildProfileTree	(Inherited from System.Web.UI.Control)
🔗	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	ClearCachedClientID	(Inherited from System.Web.UI.Control)
🔗	ClearChildControlState	(Inherited from System.Web.UI.Control)
🔗	ClearChildState	(Inherited from System.Web.UI.Control)
🔗	ClearChildViewState	(Inherited from System.Web.UI.Control)

	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Overridden.
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the

		<b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

### FindControl Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarExtender Class : FindControl Method

Searches the current naming container for a server control with the specified **id** parameter.

## Overload List

Overload	Description
----------	-------------

FindControl(String)	Searches the current naming container for a server control with the specified <a href="#">id</a> parameter.
FindControl(String,Int32)	(Inherited from System.Web.UI.Control)

## See Also

### FindControl(String) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarExtender Class > FindControl Method : FindControl(String) Method

The identifier for the control to be found.

Searches the current naming container for a server control with the specified [id](#) parameter.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Overrides Function FindControl( _     ByVal id As System.String _ ) As System.Web.UI.Control</pre>	
C#	
<pre>public override System.Web.UI.Control FindControl(     System.string id )</pre>	

### Parameters

*id*

The identifier for the control to be found.

### Return Value

The specified control, or null if the specified control does not exist.

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

### Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _	

<pre>         ByVal e As System.EventArgs _     ) </pre>	
C#	
<pre> protected override void OnPreRender(     System.EventArgs e ) </pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

## Render Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
<pre> Protected Overrides Sub Render( _     ByVal writer As System.Web.UI.HtmlTextWriter _ ) </pre>	
C#	
<pre> protected override void Render(     System.Web.UI.HtmlTextWriter writer ) </pre>	

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

	ClientIDMode	(Inherited from System.Web.UI.Control)
	Colors	The colors property specifies the list of color names which will be shown in the color name drop down list.
	Controls	(Inherited from System.Web.UI.Control)

	Culture	CultureInfo object. Each culture has different conventions for displaying dates, time, numbers, and other information. Neutral cultures are not supported.
	CultureCalendar	A value that indicates the culture calendar to format the text. This property must work with Culture property.
	DataStorage	C1EventsCalendar storage configuration.
	DatePickerLocalization	Use the Localization property in order to customize localization strings.
	DayHeaderFormat	Format of the text for the day cell header in the month view. Format argument: {0} = Day date.
	DayViewHeaderFormat	Format of the text for the day header in the day/week or list view. Format argument: {0} = Day date.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableLogs	Enables built-in log console.
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureEventDialogOnBody	Indicating the event dialog element will be append to the body or eventcalendar container.
	EventTitleFormat	Format of the title text for the event. Format arguments: {0} = Start, {1} = End, {2} = Subject, {3} =

		Location, {4} = Icons.
	FirstRowDayHeaderFormat	Format of the text for the first cell header in the first row of the month view. Format argument: {0} = Day date.
	HeaderBarVisible	Indicates whether the header bar will be visible.
	ID	(Inherited from System.Web.UI.Control)
	Localization	Use the Localization property in order to customize localization strings.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NavigationBarVisible	Indicates whether the bottom navigation bar will be visible.
	OnClientBeforeAddEvent	Occurs before the add event action. Return false or call event.preventDefault() in order to cancel event and prevent the save action. args.data - the new event data that should be added to a data source.
	OnClientBeforeDeleteCalendar	Occurs before the delete calendar action. Return false or call event.preventDefault() in order to cancel event and prevent the delete action. args.data - the calendar data that should be deleted from a data source.
	OnClientBeforeDeleteEvent	Occurs before the delete action. Return false or call event.preventDefault() in order to cancel event and prevent the delete action. args.data - the event object that should be deleted.
	OnClientBeforeEditEventDialogShow	Occurs before the built-in event dialog is shown. Return false or call event.preventDefault() in order to cancel event and prevent the built-in dialog to be shown. args.data - the event data. args.targetCell -

		target offset DOM element which can be used for popup callout.
	OnClientBeforeSaveCalendar	Occurs before the save calendar action. Return false or call event.preventDefault() in order to cancel event and prevent the save action. args.data - the new calendar data that should be saved to a data source. args.prevData - previous calendar data, this argument is empty for a new calendar.
	OnClientBeforeUpdateEvent	Occurs before the update event action. Return false or call event.preventDefault() in order to cancel event and prevent the save action. args.data - the new event data that should be updated. args.prevData - previous event data, this argument is empty for a new event.
	OnClientCalendarsChanged	Occurs when calendars option has been changed. args.calendars - the new calendars option value.
	OnClientEventCreating	Occurs when event markup is creating. args.data - the event data. args.eventTemplate The template of events displayed on the view.
	OnClientInitialized	Occurs when events calendar is constructed and events data is loaded from an external or local data source.
	OnClientSelectedDatesChanged	Occurs when selectedDates option has been changed. args.selectedDates - the new selectedDates value.
	OnClientViewTypeChanged	Occurs when viewType option has been changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)

	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SelectedDate	The selected date.
	SelectedDates	Collection of DateTime objects that represent the selected dates on the C1EventsCalendar control for the DayView.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited

		from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TimeInterval	Time interval for the Day view (in minutes).
	TimeIntervalHeight	The Day view time interval row height in pixels.
	TimeRulerFormat	Time ruler format for the Day view. Format argument: {0} = Current ruler time.
	TimeRulerInterval	Time ruler interval for the Day view (in minutes).
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Views	List of the views which need to be shown. Both default views("day", "week", "month", "list") and custom views can be added. If add a default view, only Type property of View should be set. If add a custom view, All the properties of View should be set.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	VisibleCalendars	Array of the calendar names which need to be shown.
	WebServiceUrl	The URL to the web service which will be used to

		store information about events.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)

	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	Overridden. Gets the name of the widget.

## OnClientEventCreating Property

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarExtender Class :  
OnClientEventCreating Property

Occurs when event markup is creating. args.data - the event data. args.eventTemplate The template of events displayed on the view.

### Syntax

#### Visual Basic (Declaration)

```
<C1CategoryAttribute("Client-Side Events")>
<C1DescriptionAttribute("Occurs when event markup is creating. args.data -
the event data. args.eventTemplate The template of events displayed on the
view.")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetEventAttribute("e, args")>
<WidgetOptionNameAttribute("eventCreating")>
Public Property OnClientEventCreating As System.String
```

#### C#

```
[C1Category("Client-Side Events")]
[C1Description("Occurs when event markup is creating. args.data - the event
data. args.eventTemplate The template of events displayed on the view.")]
[System.ComponentModel.DefaultValue()]
[WidgetEvent("e, args")]
[WidgetOptionName("eventCreating")]
public System.string OnClientEventCreating {get; set;}
```

## OnClientInitialized Property

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarExtender Class :  
OnClientInitialized Property

Occurs when events calendar is constructed and events data is loaded from an external or local data source.

### Syntax

#### Visual Basic (Declaration)

```
<C1DescriptionAttribute("Occurs when events calendar is constructed and
events data is loaded from an external or local data source.")>
<C1CategoryAttribute("Client-Side Events")>
<WidgetOptionNameAttribute("initialized")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetEventAttribute("e")>
Public Property OnClientInitialized As System.String
```

#### C#

```
[C1Description("Occurs when events calendar is constructed and events data is
loaded from an external or local data source.")]
[C1Category("Client-Side Events")]
[WidgetOptionName("initialized")]
[System.ComponentModel.DefaultValue()]
[WidgetEvent("e")]
public System.string OnClientInitialized {get; set;}

Fields Properties Methods

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace : C1EventsCalendarStorage Class

The following tables list the members exposed by C1EventsCalendarStorage.

### Protected Fields

	Name	Description
	_Calendars	

	_Events	
-----------------------------------------------------------------------------------	---------	--

[Top](#)

## Public Properties

	Name	Description
	Calendars	Gets the calendars collection.
	CalendarStorage	Gets the <b>WebStatusStorage</b> object.
	DataFile	The name of the xml file which will be used for unbound mode.
	Events	Gets the events collection.
	EventStorage	The EventStorage property defines data storage configuration for events..

[Top](#)

## Public Methods

	Name	Description
	AddCalendar	
	AddEvent	Overloaded. Adds the event.
	BeginUpdate	Prevents the events calendar storage from being updated until the EndUpdate method is called.
	DeleteCalendar	
	DeleteEvent	Overloaded. Deletes the event.
	EndUpdate	Unlocks the events calendar storage after a call to the BeginUpdate method call and causes an immediate update.

	Export	Overloaded. Exports the events calendar's data to a file in the specified format.
	FindEventByID	Finds the event by its ID.
	Import	Overloaded. Imports data into the events calendar from a file of the specified format.
	Initialize	Initialize data storage.
	LoadData	Load events calendar data from data source or from xml file.
	SaveData	Save events data to data source or xml file depending on data storage settings.
	ToString	ToString
	UpdateCalendar	
	UpdateEvent	Overloaded. Updates the event.

## Export(String,FileFormatEnum) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class > Export Method : `Export(String,FileFormatEnum)` Method

A **System.String** containing the full path (including the file name and extension) to export the events calendar's data to.

The FileFormatEnum value.

Exports the events calendar's data to a file in the specified format.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub Export( _     ByVal <i>path</i> As System.String, _     ByVal <i>format</i> As FileFormatEnum _ )</pre>	
C#	
<pre>public void Export(     System.string <i>path</i>,     FileFormatEnum <i>format</i> )</pre>	

### Parameters

*path*

A **System.String** containing the full path (including the file name and extension) to export the events calendar's data to.

*format*

The FileFormatEnum value.

## See Also

### Export(Stream,FileFormatEnum) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class > Export Method : Export(Stream,FileFormatEnum) Method

A **System.IO.Stream** object which specifies the stream into which the events calendar's data will be exported.

The FileFormatEnum value.

Exports the events calendar's data to a stream in the specified format.

## Syntax

Visual Basic (Declaration)

```
Public Overloads Sub Export(_
 ByVal stream As System.IO.Stream, _
 ByVal format As FileFormatEnum _
)
```

C#

```
public void Export(
 System.IO.Stream stream,
 FileFormatEnum format
)
```

### Parameters

*stream*

A **System.IO.Stream** object which specifies the stream into which the events calendar's data will be exported.

*format*

The FileFormatEnum value.

## FindEventByID Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : FindEventByID Method

The event id.

Finds the event by its ID.

## Syntax

Visual Basic (Declaration)

```
Public Function FindEventByID(_
 ByVal id As System.String _
) As Event
```

C#

```
public Event FindEventByID(
 System.string id
)
```

### Parameters

*id*

The event id.

## See Also

## Import Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : Import Method

Imports data into the events calendar from a file of the specified format.

## Overload List

Overload	Description
Import(String,FileFormatEnum)	Imports data into the events calendar from a file of the specified format.
Import(Stream,FileFormatEnum)	Imports the events calendar's data from a stream whose data is in the specified format.

## See Also

## Import(String,FileFormatEnum) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class > Import  
Method : Import(String,FileFormatEnum) Method

A **System.String** value containing the full path (including the file name and extension) to a file which contains the data to be imported into the events calendar.

The FileFormatEnum value.

Imports data into the events calendar from a file of the specified format.

## Syntax

Visual Basic (Declaration)

```
Public Overloads Sub Import(_
 ByVal path As System.String, _
 ByVal format As FileFormatEnum _
)
```

C#

```
public void Import(
 System.string path,
 FileFormatEnum format
)
```

## Parameters

*path*

A **System.String** value containing the full path (including the file name and extension) to a file which contains the data to be imported into the events calendar.

*format*

The FileFormatEnum value.

## See Also

## Reference

## Import(Stream,FileFormatEnum) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class > Import

Method : Import(Stream,FileFormatEnum) Method

A **System.IO.Stream** object which specifies the stream that contains the data to import to the events calendar.

The FileFormatEnum value.

Imports the events calendar's data from a stream whose data is in the specified format.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub Import( _     ByVal <i>stream</i> As System.IO.Stream, _     ByVal <i>format</i> As FileFormatEnum _ )</pre>	
C#	
<pre>public void Import(     System.IO.Stream <i>stream</i>,     FileFormatEnum <i>format</i> )</pre>	

## Parameters

*stream*

A **System.IO.Stream** object which specifies the stream that contains the data to import to the events calendar.

*format*

The FileFormatEnum value.

## See Also

## Initialize Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : Initialize Method

Initialize data storage.

## Syntax

Visual Basic (Declaration)	
Public Sub Initialize()	
C#	
public void Initialize()	

## See Also

### Reference

C1EventsCalendarStorage Class

C1EventsCalendarStorage Members

## LoadData Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : LoadData Method

Load events calendar data from data source or from xml file.

## Syntax

Visual Basic (Declaration)	
Public Sub LoadData()	
C#	
public void LoadData()	

## See Also

### Reference

C1EventsCalendarStorage Class

C1EventsCalendarStorage Members

## SaveData Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : SaveData Method

Save events data to data source or xml file depending on data storage settings.

## Syntax

Visual Basic (Declaration)	
<code>Public Sub SaveData()</code>	
C#	
<code>public void SaveData()</code>	

## See Also

### Reference

C1EventsCalendarStorage Class  
C1EventsCalendarStorage Members

## ToString Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : ToString Method

ToString

## Syntax

Visual Basic (Declaration)	
<code>Public Overrides Function ToString() As System.String</code>	
C#	
<code>public override System.string ToString()</code>	

## See Also

### Reference

C1EventsCalendarStorage Class  
C1EventsCalendarStorage Members

## UpdateCalendar Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : UpdateCalendar Method

## Syntax

Visual Basic (Declaration)	
<code>Public Function UpdateCalendar( _</code>	

```
ByVal calData As System.Collections.Hashtable _
) As System.Collections.Hashtable
```

C#

```
public System.Collections.Hashtable UpdateCalendar(
 System.Collections.Hashtable calData
)
```

### Parameters

*calData*

## See Also

### Reference

C1EventsCalendarStorage Class

C1EventsCalendarStorage Members

## UpdateEvent Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class : UpdateEvent Method

Updates the event.

## Overload List

Overload	Description
UpdateEvent(Event)	Updates the event.
UpdateEvent(Hashtable)	Updates the event.

## See Also

### Reference

C1EventsCalendarStorage Class

C1EventsCalendarStorage Members

## UpdateEvent(Event) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class > UpdateEvent Method : UpdateEvent(Event) Method

The event.

Updates the event.

Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Function UpdateEvent( _     ByVal ev As Event _ ) As Event</pre>	
C#	
<pre>public Event UpdateEvent(     Event ev )</pre>	

Parameters

*ev*

The event.

UpdateEvent(Hashtable) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarStorage Class > UpdateEvent Method : UpdateEvent(Hashtable) Method

The raw event data.

Updates the event.

Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Function UpdateEvent( _     ByVal <i>eventData</i> As System.Collections.Hashtable _ ) As Event</pre>	
C#	

```
public Event UpdateEvent(
 System.Collections.Hashtable eventData
)
```

### Parameters

*eventData*

The raw event data.

### Export(String) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarXmlExchanger Class > Export Method : Export(String) Method

A **System.String** containing the full path (including the file name and extension) to export the scheduler's data to.

Exports the scheduler's data to a file.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub Export( _     ByVal <i>path</i> As System.String _ )</pre>	
C#	
<pre>public void Export(     System.string <i>path</i> )</pre>	

### Parameters

*path*

A **System.String** containing the full path (including the file name and extension) to export the scheduler's data to.

## See Also

### Export(Stream) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarXmlExchanger Class > Export Method : Export(Stream) Method

A **System.IO.Stream** object which specifies the stream into which the scheduler's data will be exported.

Exports the scheduler's data to a stream.

## Syntax

Visual Basic (Declaration)

```
Public Overloads Sub Export(_
 ByVal stream As System.IO.Stream _
)
```

C#

```
public void Export(
 System.IO.Stream stream
)
```

### Parameters

*stream*

A **System.IO.Stream** object which specifies the stream into which the scheduler's data will be exported.

### Export(String,IList<Event>) Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > C1EventsCalendarXmlExchanger Class > Export

Method : Export(String,IList<Event>) Method

A **System.String** containing the full path (including the file name and extension) to export.

A **System.Collections.Generic.IList`1** object.

Exports the appointments's data to a file.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub Export( _     ByVal path As System.String, _     ByVal appointments As System.Collections.Generic.IList(Of Event) _ )</pre>	
C#	
<pre>public void Export(     System.string path,     System.Collections.Generic.IList&lt;Event&gt; appointments )</pre>	

## Parameters

*path*

A **System.String** containing the full path (including the file name and extension) to export.

*appointments*

A **System.Collections.Generic.IList`1** object.

## See Also

## Overview

Members

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace : C1EventStorage Class

Allows binding to DataSource and mapping DataSource's fields to Event's properties.

## Object Model

C1EventStorage

## Syntax

Visual Basic (Declaration)	
<pre>&lt;System.ComponentModel.DefaultPropertyAttribute("DataSourceID")&gt; &lt;System.Web.UI.PersistencemodeAttribute(Persistencemode.InnerProperty)&gt; &lt;System.ComponentModel.TypeConverterAttribute("System.ComponentModel.ExpandableObjectConverter, System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")&gt; Public Class C1EventStorage</pre>	
C#	
<pre>[System.ComponentModel.DefaultProperty("DataSourceID")] [System.Web.UI.Persistencemode(Persistencemode.InnerProperty)] [System.ComponentModel.TypeConverter("System.ComponentModel.ExpandableObjectConverter, System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")] public class C1EventStorage</pre>

Fields Properties Methods

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace : Event Class

The following tables list the members exposed by Event.

## Public Constructors

Name	Description
------	-------------

	Event Constructor	Overloaded.
-----------------------------------------------------------------------------------	-------------------	-------------

[Top](#)

## Public Fields

	Name	Description
	_allDayEvent	
	_color	
	_description	
	_end	
	_start	
	_subject	

[Top](#)

## Public Properties

	Name	Description
	Allday	indicates all day event.
	Calendar	Calendar id to which the event belongs.
	Color	Event color.
	Data	Gets or sets the raw event data.
	Description	Event description.
	End	End date/time.
	Id	The unique event id (this field generated automatically).

	Location	Event location.
	ParentRecurrenceId	id of the event object that defines the recurrence criteria for this event object. If an event is recurring (see isRecurring) it represents an occurrence in the series that is started and defined by a specific pattern event. Use the getPattern method in order to obtain the pattern of the current event. A pattern event can be recognized by its recurrenceState field set to the "master" value. The recurrence information defined by the pattern event can be accessed via the recurrencePattern field of the event. If this event is a not member of a recurrence, or is itself a root event, this field will be null.
	RecurrencePattern	Represents the recurrence attributes of an event. Only master events can have this field (recurrenceState is "master")
	RecurrenceState	Indicates the recurrence state of the event. (possible values are "notRecurring"(or null), "master", "occurrence", "exception", "removed")
	Start	Start date/time.
	Subject	Event title.
	Tag	The tag property can be used to store any user-defined information

[Top](#)

## Public Methods

	Name	Description
	CopyFrom	Copies properties from event given by parameter ev.
	FromXml	Reconstructs event from an <b>System.Xml.XmlReader</b> .
	PropsToXml	Creates an XML encoding of the event properties and returns it as string.
	ToXml	Creates an XML encoding of the event.

 Overload List

## Event Constructor(Hashtable)

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > Event Class > Event Constructor : Event Constructor(Hashtable)

Initializes a new instance of the Event class.

### Syntax

Visual Basic (Declaration)	
<pre>Public Function New( _     ByVal ht As System.Collections.Hashtable _ )</pre>	
C#	
<pre>public Event(     System.Collections.Hashtable ht )</pre>	

### Parameters

*ht*

### See Also

Event Class  
 Event Members  
 Overload List

## Methods

For a list of all members of this type, see Event members.

### Public Methods

	Name	Description
	CopyFrom	Copies properties from event given by parameter ev.

≡	FromXml	Reconstructs event from an <b>System.Xml.XmlReader</b> .
≡	PropsToXml	Creates an XML encoding of the event properties and returns it as string.
≡	ToXml	Creates an XML encoding of the event.

## CopyFrom Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > Event Class : CopyFrom Method

The event.

Copies properties from event given by parameter ev.

## Syntax

Visual Basic (Declaration)	
<pre>Public Sub CopyFrom( _     ByVal ev As Event _ )</pre>	
C#	
<pre>public void CopyFrom(     Event ev )</pre>	

### Parameters

*ev*

The event.

## See Also

### Reference

Event Class  
Event Members

## FromXml Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > Event Class : FromXml Method

An **System.Xml.XmlReader** which contains the **Appointment** data.

Reconstructs event from an **System.Xml.XmlReader**.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overridable Function FromXml( _     ByVal reader As System.Xml.XmlReader _ ) As System.Boolean</pre>	
C#	
<pre>public virtual System.bool FromXml(     System.Xml.XmlReader reader )</pre>	

## Parameters

*reader*

An **System.Xml.XmlReader** which contains the **Appointment** data.

## Return Value

True if event has been changed.

## See Also

## Reference

Event Class  
Event Members

## PropsToXml Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > Event Class : PropsToXml() Method

Creates an XML encoding of the event properties and returns it as string.

## Syntax

Visual Basic (Declaration)	
Public Function PropsToXml() As System.String	
C#	
public System.string PropsToXml()	

## See Also

### Reference

Event Class  
Event Members

## ToXml Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > Event Class : ToXml Method

The **System.Xml.XmlWriter** that will receive the object data.

Creates an XML encoding of the event.

## Syntax

Visual Basic (Declaration)	
Public Overridable Sub ToXml( _ ByVal <i>writer</i> As System.Xml.XmlWriter _ )	
C#	
public virtual void ToXml( System.Xml.XmlWriter <i>writer</i> )	

### Parameters

*writer*

The **System.Xml.XmlWriter** that will receive the object data.

## Properties

For a list of all members of this type, see [Event members](#).

### Public Properties

	Name	Description
	Allday	indicates all day event.
	Calendar	Calendar id to which the event belongs.
	Color	Event color.
	Data	Gets or sets the raw event data.
	Description	Event description.
	End	End date/time.
	Id	The unique event id (this field generated automatically).
	Location	Event location.
	ParentRecurrenceId	id of the event object that defines the recurrence criteria for this event object. If an event is recurring (see <code>isRecurring</code> ) it represents an occurrence in the series that is started and defined by a specific pattern event. Use the <code>getPatern</code> method in order to obtain the pattern of the current event. A pattern event can be recognized by its <code>recurrenceState</code> field set to the "master" value. The recurrence information defined by the pattern event can be accessed via the <code>recurrencePattern</code> field of the event. If this event is a not member of a recurrence, or is itself a root event, this field will be null.
	RecurrencePattern	Represents the recurrence attributes of an event. Only master events can have this field ( <code>recurrenceState</code> is "master")
	RecurrenceState	Indicates the recurrence state of the event. (possible values are "notRecurring"(or null), "master", "occurrence", "exception",

		"removed")
	Start	Start date/time.
	Subject	Event title.
	Tag	The tag property can be used to store any user-defined information

## ParentRecurrenceId Property

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > Event Class : ParentRecurrenceId Property

id of the event object that defines the recurrence criteria for this event object. If an event is recurring (see `isRecurring`) it represents an occurrence in the series that is started and defined by a specific pattern event. Use the `getPattern` method in order to obtain the pattern of the current event. A pattern event can be recognized by its `recurrenceState` field set to the "master" value. The recurrence information defined by the pattern event can be accessed via the `recurrencePattern` field of the event. If this event is a not member of a recurrence, or is itself a root event, this field will be null.

### Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<WidgetOptionNameAttribute("parentRecurrenceId")>
Public Property ParentRecurrenceId As System.String
```

C#

```
[WidgetOption()]
[WidgetOptionName("parentRecurrenceId")]
public System.string ParentRecurrenceId {get; set;}
```

### See Also

## RecurrencePattern Property

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > Event Class : RecurrencePattern Property

Represents the recurrence attributes of an event. Only master events can have this field (`recurrenceState` is "master")

### Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<WidgetOptionNameAttribute("recurrencePattern")>
Public Property RecurrencePattern As RecurrencePattern
```

C#

```
[WidgetOption()]
[WidgetOptionName("recurrencePattern")]
public RecurrencePattern RecurrencePattern {get; set;}
```

## See Also

## LocalizationOption Constructor

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > LocalizationOption Class : LocalizationOption Constructor

Initializes a new instance of the LocalizationOption class.

### Syntax

Visual Basic (Declaration)	
<pre>Public Function New( _     ByVal evCal As C1EventsCalendarExtender _ )</pre>	
C#	
<pre>public LocalizationOption(     C1EventsCalendarExtender evCal )</pre>	

### Parameters

*evCal*

## ToString Method

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > LocalizationOption Class : ToString Method

Returns a **System.String** that represents this instance.

## Syntax

Visual Basic (Declaration)	
Public Overrides Function ToString() As System.String	
C#	
public override System.string ToString()	

### Return Value

A **System.String** that represents this instance.

For a list of all members of this type, see LocalizationOption members.

### Public Properties

	Name	Description
	activityCreatingCalendar	activityCreatingCalendar string.
	activityCreatingEvent	activityCreatingEvent string.
	activityDeletingCalendar	activityDeletingCalendar string.
	activityDeletingEvent	activityDeletingEvent string.
	activityLoading	activityLoading string.
	activityUpdating	activityUpdating string.
	activityUpdatingCalendar	activityUpdatingCalendar string.
	activityUpdatingEvent	activityUpdatingEvent string.
	agendaHeaderFullDateFormat	agendaHeaderFullDateFormat string.
	agendaLoadingMoreEvents	agendaLoadingMoreEvents string.
	agendaMoreEventsFormat	agendaMoreEventsFormat string.
	agendaTimeFormat	agendaTimeFormat string.
	buttonCancel	buttonCancel string.
	buttonClearAll	buttonClearAll string.
	buttonClose	buttonClose string.

	buttonDayView	buttonDayView string.
	buttonDelete	buttonDelete string.
	buttonListView	buttonListView string.
	buttonMonthView	buttonMonthView string.
	buttonOK	buttonOK string.
	buttonSave	buttonSave string.
	buttonToday	buttonToday string.
	buttonWeekView	buttonWeekView string.
	calendarNextTooltip	calendarNextTooltip string.
	calendarPrevTooltip	calendarPrevTooltip string.
	calendarTitleFormat	calendarTitleFormat string.
	calendarToolTipFormat	calendarToolTipFormat string.
	customMonthViewHeaderFormat	customMonthViewHeaderFormat string.
	customMonthViewSecondTitleFormat	customMonthViewSecondTitleFormat string.
	customSingleMonthViewHeaderFormat	customSingleMonthViewHeaderFormat string.
	customSingleWeekViewHeaderFormat	customSingleWeekViewHeaderFormat string.
	customSingleYearViewHeaderFormat	customSingleYearViewHeaderFormat string.
	customWeekViewHeaderFormat	customWeekViewHeaderFormat string.
	customYearViewHeaderFormat	customYearViewHeaderFormat string.

	customYearViewMonthFormat	customYearViewMonthFormat string.
	customYearViewSecondTitleFormat	customYearViewSecondTitleFormat string.
	dayDetailsLabelFulldateFormat	dayDetailsLabelFulldateFormat string.
	dayDetailsLabelYearFormat	dayDetailsLabelYearFormat string.
	labelAllDay	labelAllDay string.
	labelCalendar	labelCalendar string.
	labelCalendarName	labelCalendarName string.
	labelColor	labelColor string.
	labelDescription	labelDescription string.
	labelEnds	labelEnds string.
	labelLocation	labelLocation string.
	labelName	labelName string.
	labelRepeat	labelRepeat string.
	labelStarts	labelStarts string.
	labelToday	labelToday string.
	logCouldntOpenLocalStorage	logCouldntOpenLocalStorage string.
	messageEndOccursBeforeStart	messageEndOccursBeforeStart string.
	monthCellMoreEventsFormat	monthCellMoreEventsFormat string.
	monthViewHeaderFormat	monthViewHeaderFormat string.

	navigatorBarNextTooltip	navigatorBarNextTooltip string.
	navigatorBarPrevTooltip	navigatorBarPrevTooltip string.
	promptOpenOccurrenceFormat	promptOpenOccurrenceFormat string.
	repeatDaily	repeatDaily string.
	repeatMonthly	repeatMonthly string.
	repeatNone	repeatNone string.
	repeatWeekly	repeatWeekly string.
	repeatWorkDays	repeatWorkDays string.
	repeatYearly	repeatYearly string.
	textNewEvent	textNewEvent string.
	titleEditCalendar	titleEditCalendar string.
	weekViewHeaderFormat	weekViewHeaderFormat string.
	weekViewHeaderFormat2Months	weekViewHeaderFormat2Months string.

### Public Constructors

	Name	Description
	RecurrencePattern Constructor	Overloaded.

Top

### Public Properties

	Name	Description
	Data	Gets or sets the raw pattern data.
	DayOfMonth	The number of the day in its respective month on which each occurrence will occur. Applicable only when the recurrenceType field is set to "monthly" or "yearly". The default value is 1.
	dayOfWeekMask	String, contains set of values representing the mask for week days on which the recurring event occurs. Monthly and yearly patterns are only valid for a single day. The default value is "none". When the "RecurrenceType" field is set to "daily", the "DayOfWeekMask" field can only be set to "everyDay"; setting the field to any other value will result in an exception. When the "recurrenceType" field is set to

		<p>"workdays", the "dayOfWeekMask" field can only be set to "workDays"; setting the field to any other value will result in an exception. When the "recurrenceType" field is set to "weekly", the "dayOfWeekMask" field cannot be set to "none"; doing so will result in an exception being thrown. When the recurrenceType" field is set to "monthly" or "yearly" the "dayOfWeekMask" field is not applicable. Possible values are: none - no specific value; the actual value is obtained from the root event object. sunday - specifies Sunday. monday - Specifies Monday. tuesday - Specifies Tuesday. wednesday - Specifies Wednesday. thursday - Specifies Thursday. friday - Specifies Friday. saturday - Specifies Saturday. weekendDays - Specifies Saturday and Sunday (or what ever days according to the settings of the C1EventsCalendar). workDays - Specifies work days (all days except weekend). everyDay - Specifies every day of the week.</p>
	EndTime	Indicates the end time for the given occurrence of the recurrence pattern.
	Exceptions	Holds the list of event object ids that define the exceptions to that series of events.
	Instance	Determines the week in a month in which the event will occur. This field is only valid for recurrences of the "monthlyNth" and "yearlyNth" types and allows the definition of a recurrence pattern that is only valid for the Nth occurrence, such as "the 2nd Sunday in March" pattern. The default value is "first". Possible values are: first - the recurring event will occur on the specified day or days of the first week in the month. second - The recurring event will occur on the specified day or days of the second week in the month. third = - The recurring event will occur on the specified day or days of the third week in the month. fourth - The recurring event will occur on the specified day or days of the fourth week in the month. last - The recurring event will occur on the specified day or days of the last week in the month.
	Interval	Specifies the interval between occurrences of the recurrence. The

		interval field works in conjunction with the "recurrenceType" field to determine the cycle of the recurrence. The maximum allowable value is 99 for weekly patterns and 999 for daily patterns. The default value is 1. For example, if the recurrenceType is set to daily, and the "interval" is set to 3, the recurrence will occur every third day.
	MonthOfYear	Number, indicates which month of the year is valid for the specified recurrence pattern. Can be a number from 1 to 12. This field is only valid for recurrence patterns whose recurrenceType" field is set to "yearlyNth" or "yearly". The default value is 1.
	NoEndDate	Indicates if the recurrence pattern is endless. The default value is True. This field must be coordinated with other fields when setting up a recurrence pattern. If the patternEndDate field or the occurrences field is set, the pattern is considered to be finite and the "noEndDate" field is false. If neither patternEndDate nor occurrences is set, the pattern is considered infinite and "noEndDate" is true.
	Occurrences	The number of occurrences for the recurrence pattern. This field allows the definition of a recurrence pattern that is only valid for the specified number of subsequent occurrences. For example, you can set this property to 10 for a formal training course that will be held on the next ten Thursday evenings. The default value is 0. This field must be coordinated with other fields when setting up a recurrence pattern. If the "patternEndDate" field or the "occurrences" field is set, the pattern is considered to be finite and the "noEndDate" field is false. If neither "patternEndDate" nor "occurrences" is set, the pattern is considered infinite and "noEndDate" is true.
	ParentRecurrenceId	Id of the event object which represents the master event for this RecurrencePattern object.
	PatternEndDate	Indicates the end date of the recurrence pattern.
	PatternStartDate	Indicates the start date of the recurrence pattern.
	RecurrenceType	Determines the type of recurrence: daily - the recurring event

		reoccurs on a daily basis. workdays - the recurring event reoccurs every working day. monthly - the recurring event reoccurs on a monthly basis. monthlyNth - the recurring event reoccurs every N months. weekly - the recurring event reoccurs on a weekly basis. yearly - the recurring event reoccurs on an yearly basis. yearlyNth - the recurring event reoccurs every N years.
	RemovedOccurrences	Holds the list of event object's ids removed from that series of events.
	StartTime	Indicates the start time for the given occurrence of the recurrence pattern.

## MonthOfYear Property

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > RecurrencePattern Class : MonthOfYear Property

Number, indicates which month of the year is valid for the specified recurrence pattern. Can be a number from 1 to 12. This field is only valid for recurrence patterns whose recurrenceType field is set to "yearlyNth" or "yearly". The default value is 1.

### Syntax

Visual Basic (Declaration)	
<pre>&lt;WidgetOptionNameAttribute("monthOfYear")&gt; &lt;WidgetOptionAttribute()&gt; Public Property MonthOfYear As System.Integer</pre>	
C#	
<pre>[WidgetOptionName("monthOfYear")] [WidgetOption()] public System.int MonthOfYear {get; set;}</pre>

## NoEndDate Property

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > RecurrencePattern Class : NoEndDate Property

Indicates if the recurrence pattern is endless. The default value is True. This field must be coordinated with other fields when setting up a recurrence pattern. If the patternEndDate field or the occurrences field is set, the pattern is considered to be finite and the "noEndDate" field is false. If neither patternEndDate nor occurrences is set, the pattern is considered infinite and "noEndDate" is true.

### Syntax

Visual Basic (Declaration)	
<pre>&lt;WidgetOptionAttribute()&gt; &lt;WidgetOptionNameAttribute("noEndDate")&gt; Public Property NoEndDate As System.Boolean</pre>	

C#

```
[WidgetOption()]
[WidgetOptionName("noEndDate")]
public System.bool NoEndDate {get; set;}
```

## Occurrences Property

C1.Web.Wijmo.Extenders.C1EventsCalendar Namespace > RecurrencePattern Class : Occurrences Property

The number of occurrences for the recurrence pattern. This field allows the definition of a recurrence pattern that is only valid for the specified number of subsequent occurrences. For example, you can set this property to 10 for a formal training course that will be held on the next ten Thursday evenings. The default value is 0. This field must be coordinated with other fields when setting up a recurrence pattern. If the "patternEndDate" field or the "occurrences" field is set, the pattern is considered to be finite and the "noEndDate" field is false. If neither "patternEndDate" nor "occurrences" is set, the pattern is considered infinite and "noEndDate" is true.

## Syntax

Visual Basic (Declaration)

```
<WidgetOptionNameAttribute("occurrences")>
<WidgetOptionAttribute()>
Public Property Occurrences As System.Integer
```

C#

```
[WidgetOptionName("occurrences")]
[WidgetOption()]
public System.int Occurrences {get; set;}
```

## Overview

Members

C1.Web.Wijmo.Extenders.C1Expander Namespace : C1ExpanderExtender Class

Extender for the expander widget. Represents an expanding panel that shows or hides embedded or external content.

## Object Model

C1ExpanderExtender

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.LicenseProviderAttribute(>
<System.Web.UI.TargetControlTypeAttribute(System.Web.UI.WebControls.Panel)>
```

```
<System.ComponentModel.ToolboxItemAttribute(ToolboxItemType=System.Drawing.Design.ToolboxItem, ToolboxItemTypeName="System.Drawing.Design.ToolboxItem, System.Drawing, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b03f5f7f11d50a3a")>

## Members

Properties Methods Events

C1.Web.Wijmo.Extenders.C1Expander Namespace : C1ExpanderExtender Class

The following tables list the members exposed by C1ExpanderExtender.

## Public Constructors

	Name	Description
	C1ExpanderExtender Constructor	Initializes a new instance of the C1ExpanderExtender class.

Top

## Public Properties

	Name	Description
	AllowExpand	Determines if the widget can expand. Set this option to false if you want to disable collapse/expand ability.
	Animated	Determines the animation easing effect; set this option to false in order to disable animation. Additional options that are available for the animation function include: expand - value of true indicates that content element must be expanded. horizontal - value of true indicates that expander is horizontally orientated (when expandDirection is left or right). content - jQuery object that contains content element to be expanded or collapsed.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	ContentUrl	Gets or sets a URL to external content to display in the expander. For example, set to "http://componentone.com/" for the ComponentOne Web site.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ExpandDirection	Determines the content expand direction. Available values are top, right, bottom, and left.
	Expanded	Determines the visibility state of the content panel. If true, the content element is visible.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientAfterCollapse	Occurs after the content area collapses.

	OnClientAfterExpand	Occurs after the content area expands.
	OnClientBeforeCollapse	Occurs before the content area collapses. This event can be cancelled to prevent the content area from collapsing.
	OnClientBeforeExpand	Occurs before the content area expands. This event can be cancelled to prevent the content area from expanding.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all

		<p>widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	UniqueID	<p>(Inherited from System.Web.UI.Control)</p>
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	<p>(Inherited from System.Web.UI.Control)</p>
	ViewStateMode	<p>(Inherited from System.Web.UI.Control)</p>
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	WijmoCssAdapter	<p>Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	Focus	(Inherited from System.Web.UI.Control)
🔗	GetProperty<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
🔗	HasControls	(Inherited from System.Web.UI.Control)
🔗	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	ResolveClientUrl	(Inherited from System.Web.UI.Control)
🔗	ResolveUrl	(Inherited from System.Web.UI.Control)
🔗	SetProperty<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
🔗	AddParsedSubObject	(Inherited from System.Web.UI.Control)
🔗	BuildProfileTree	(Inherited from System.Web.UI.Control)

	CheckIsValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)

	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Expander Namespace > C1ExpanderExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

## Reference

C1ExpanderExtender Class

## Render Method

C1.Web.Wijmo.Extenders.C1Expander Namespace > C1ExpanderExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Public Properties

	Name	Description
	AllowExpand	Determines if the widget can expand. Set this option to false if you want to disable collapse/expand ability.
	Animated	Determines the animation easing effect; set this option to false in order to disable animation. Additional options that are available for the animation function include: expand - value of true

		<p>indicates that content element must be expanded.</p> <p>horizontal - value of true indicates that expander is horizontally orientated (when expandDirection is left or right). content - jQuery object that contains content element to be expanded or collapsed.</p>
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	ContentUrl	Gets or sets a URL to external content to display in the expander. For example, set to "http://componentone.com/" for the ComponentOne Web site.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)

	EnableViewState	(Inherited from System.Web.UI.Control)
	ExpandDirection	Determines the content expand direction. Available values are top, right, bottom, and left.
	Expanded	Determines the visibility state of the content panel. If true, the content element is visible.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientAfterCollapse	Occurs after the content area collapses.
	OnClientAfterExpand	Occurs after the content area expands.
	OnClientBeforeCollapse	Occurs before the content area collapses. This event can be cancelled to prevent the content area from collapsing.
	OnClientBeforeExpand	Occurs before the content area expands. This event can be cancelled to prevent the content area from expanding.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector

		property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)

	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## ExpandDirection Property

C1.Web.Wijmo.Extenders.C1Expander Namespace > C1ExpanderExtender Class : ExpandDirection Property

Determines the content expand direction. Available values are top, right, bottom, and left.

## Syntax

Visual Basic (Declaration)	
<pre> &lt;WidgetOptionAttribute()&gt; &lt;System.ComponentModel.DefaultValueAttribute()&gt; &lt;C1DescriptionAttribute("Determines the content expand direction. Available values are top, right,    bottom, and left.")&gt; &lt;C1CategoryAttribute("Behavior")&gt; Public Property ExpandDirection As ExpandDirection </pre>	
C#	
<pre> [WidgetOption()] [System.ComponentModel.DefaultValue()] [C1Description("Determines the content expand direction. Available values are top, right,    bottom, and left.")] [C1Category("Behavior")] public ExpandDirection ExpandDirection {get; set;} </pre>

## Enumerations

### ExpandDirection

C1.Web.Wijmo.Extenders.C1Expander Namespace : ExpandDirection Enumeration

Specifies the direction towards which a C1Expander control opens.

#### Syntax

Visual Basic (Declaration)	
<pre>Public Enum ExpandDirection     Inherits System.Enum</pre>	
C#	
<pre>public enum ExpandDirection : System.Enum</pre>	

#### Members

Member	Description
<b>Bottom</b>	The header will appear above the body and the control's body will expand towards the bottom of the control.
<b>Left</b>	The header will appear to the right of the body and the control's body will expand towards the left of the control.
<b>Right</b>	The header will appear to the left of the body and the control's body will expand towards the right of the control.
<b>Top</b>	The header will appear below the body and the control's body will expand towards the top of the control.

C1.Web.Wijmo.Extenders.C1FlipCard Namespace : C1FlipCardExtender Class

The following tables list the members exposed by C1FlipCardExtender.

## Public Constructors

	Name	Description
	C1FlipCardExtender Constructor	Initializes a new instance of the C1FlipCardExtender class.

Top

## Public Properties

	Name	Description
	Animation	The flip animation options, define direction, duration etc.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Height	A value that indicates the height of the wijflipcard widget.
	ID	(Inherited from System.Web.UI.Control)

	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientFlipped	This event is triggered when flip animation ends.
	OnClientFlipping	This event is triggered when flip animation starts.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TriggerEvent	A value that indicates the event used to flip between two panels.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of the wijflipcard widget.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

		)
--	--	---

[Top](#)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)

	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetProperty<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetProperty<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)

	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)

	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1FlipCard Namespace > C1FlipCardExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

## Render Method

C1.Web.Wijmo.Extenders.C1FlipCard Namespace > C1FlipCardExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TriggerEvent	A value that indicates the event used to flip between

		two panels.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of the wijflipcard widget.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Icons	Icons to display, with or without text (see text option). The primary icon is displayed by default on the left of the label text, the secondary by default is on the right. Value for the primary and secondary properties must be a classname (String), eg. "ui-icon-gear". For using only one icon: icons: {primary:'ui-icon-locked'}. For using two icons: icons: {primary:'ui-icon-gear',secondary:'ui-icon-triangle-1-s'}
	ID	(Inherited from System.Web.UI.Control)

	Label	Text to show on the button. When not specified (null), the element's html content is used, or its value attribute when it's an input element of type submit or reset; or the html content of the associated label element if its an input of type radio or checkbox
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Text	
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all

		<p>widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	UniqueID	<p>(Inherited from System.Web.UI.Control)</p>
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	<p>(Inherited from System.Web.UI.Control)</p>
	ViewStateMode	<p>(Inherited from System.Web.UI.Control)</p>
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	WijmoCssAdapter	<p>Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>

### Public Constructors

	Name	Description
	C1DropDownExtender Constructor	

[Top](#)

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In

		order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets.

		<p>Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	UniqueID	<p>(Inherited from System.Web.UI.Control)</p>
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	<p>(Inherited from System.Web.UI.Control)</p>
	ViewStateMode	<p>(Inherited from System.Web.UI.Control)</p>
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	WijmoCssAdapter	<p>Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from</p>

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ZIndex	Gets or sets the dropdown's z-index.

	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI

		or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
--	--	----------------------------------------------------------------------------------

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)

	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	C1GalleryExtender Constructor	

[Top](#)

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoPlay	When AutoPlay is true the gallery images will be played automatically (similarly to a slideshow).
	AutoPlayMovies	Determines whether to turn on the autoplay option in the movie player.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Control	Gets or sets the content found between the opening and closing tags of the specified HTML server control.
	ControlPosition	Sets the position of the controls in gallery to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery ui position's

		position:{my:'top left',at:'right bottom',offset:}.
	Controls	(Inherited from System.Web.UI.Control)
	Counter	Gets or sets the counter's format string.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FlashInstall	Gets or sets the relative path and name of the flash installation guide.
	FlvPlayer	Gets or sets the relative path and name of the flash video player.
	ID	(Inherited from System.Web.UI.Control)
	Interval	Determines the time span, in milliseconds, between two pictures being shown in AutoPlay mode.
	Mode	Determines the gallery's display mode.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientAfterTransition	The name of the function which will be called after transition to another image.
	OnClientBeforeTransition	The name of the function which will be called before transition to another image.
	OnClientLoadCallback	The name of the function which will be called after

		created the DOM element.
	Page	(Inherited from System.Web.UI.Control)
	PagerPosition	Sets the position of the pager in gallery to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery ui position's position:{my:'top left',at:'right bottom',offset:}.
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ScrollWithSelection	Determines if the thumbnail images scroll automatically when images are selected.
	ShowCaption	Determines if the item caption should be shown.
	ShowControls	Determines if custom controls should be shown.
	ShowControlsOnHover	Determines whether the controls should be shown after created or when users hover over the DOM element.
	ShowCounter	Determines if the counter is shown.
	ShowMovieControls	Determines if movie controls are enabled in the movie player.
	ShowPager	Determines if the pager should be shown.
	ShowThumbnailCaptions	Determines whether the caption of thumbnails should be shown.
	ShowTimer	Determines if the gallery timer should be shown.
	Site	(Inherited from System.Web.UI.Control)

	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThumbnailDirection	Controls the thumbnail images' location. Possible values are "before" and " after".
	ThumbnailOrientation	Controls the gallery's orientation. All images are vertical regardless of the orientation of the gallery.

	ThumbsDisplay	Determines the number of thumbnail images to display.
	ThumbsLength	Determines the height/width of thumbnail images.
	Transitions	Determines the animation effect settings to be used when the gallery is scrolled.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Properties

C1.Web.Wijmo.Extenders.C1Gallery Namespace : C1GalleryExtender Class

For a list of all members of this type, see C1GalleryExtender members.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)

	AutoPlay	When AutoPlay is true the gallery images will be played automatically (similarly to a slideshow).
	AutoPlayMovies	Determines whether to turn on the autoplay option in the movie player.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Control	Gets or sets the content found between the opening and closing tags of the specified HTML server control.
	ControlPosition	Sets the position of the controls in gallery to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery ui position's position:{my:'top left',at:'right bottom',offset:}.
	Controls	(Inherited from System.Web.UI.Control)
	Counter	Gets or sets the counter's format string.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FlashInstall	Gets or sets the relative path and name of the flash installation guide.
	FlvPlayer	Gets or sets the relative path and name of the flash video player.
	ID	(Inherited from System.Web.UI.Control)
	Interval	Determines the time span, in milliseconds, between two pictures being shown in AutoPlay mode.
	Mode	Determines the gallery's display mode.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientAfterTransition	The name of the function which will be called after transition to another image.
	OnClientBeforeTransition	The name of the function which will be called before transition to another image.
	OnClientLoadCallback	The name of the function which will be called after created the DOM element.
	Page	(Inherited from System.Web.UI.Control)
	PagerPosition	Sets the position of the pager in gallery to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery ui position's position:{my:'top left',at:'right bottom',offset:}.
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)

	ScrollWithSelection	Determines if the thumbnail images scroll automatically when images are selected.
	ShowCaption	Determines if the item caption should be shown.
	ShowControls	Determines if custom controls should be shown.
	ShowControlsOnHover	Determines whether the controls should be shown after created or when users hover over the DOM element.
	ShowCounter	Determines if the counter is shown.
	ShowMovieControls	Determines if movie controls are enabled in the movie player.
	ShowPager	Determines if the pager should be shown.
	ShowThumbnailCaptions	Determines whether the caption of thumbnails should be shown.
	ShowTimer	Determines if the gallery timer should be shown.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	<p>Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThumbnailDirection	Controls the thumbnail images' location. Possible values are "before" and " after".
	ThumbnailOrientation	Controls the gallery's orientation. All images are vertical regardless of the orientation of the gallery.
	ThumbsDisplay	Determines the number of thumbnail images to display.
	ThumbsLength	Determines the height/width of thumbnail images.
	Transitions	Determines the animation effect settings to be used when the gallery is scrolled.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery

		Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## ShowControlsOnHover Property

C1.Web.Wijmo.Extenders.C1Gallery Namespace > C1GalleryExtender Class : ShowControlsOnHover Property

Determines whether the controls should be shown after created or when users hover over the DOM element.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;C1DescriptionAttribute("Determines whether the controls should be shown after created or when users hover over the DOM element.")&gt; &lt;C1CategoryAttribute("Behavior")&gt; &lt;System.ComponentModel.DefaultValueAttribute()&gt; &lt;WidgetOptionAttribute()&gt; Public Property ShowControlsOnHover As System.Boolean</pre>	
C#	
<pre>[C1Description("Determines whether the controls should be shown after created or when users hover over the DOM element.")] [C1Category("Behavior")] [System.ComponentModel.DefaultValue()] [WidgetOption()] public System.bool ShowControlsOnHover {get; set;}</pre>

## Overview

## Classes

	Class	Description
	C1GaugeExtender	
	C1LinearGaugeExtender	
	C1RadialGaugeExtender	
	C1RadialGaugePointerCap	Represents the C1RadialGaugePointerCap class which contains all settings for the gauge's cap option.
	GaugeFace	Represents the GaugeFace class which contains all settings for the gauge's face option.
	GaugeLabel	Represents the GaugeLabel class which contains all settings for the gauge's label option.
	GaugeRange	Represents the C1RadialGaugePointerCap class which contains all settings for the gauge's range option.
	GaugePointer	Represents the GaugePointer class which contains all settings for the gauge's pointer option.
	GaugeTick	Represents the GaugeTick class which contains all settings for the gauge's tickMinor/tickMajor option.
	Origin	Represents the C1RadialGaugePointerCap class which contains all settings for the gauge's origin option.

## Enumerations

	Enumeration	Description
	Marker	Use the members of this enumeration to set the value of the GaugeTick.Marker property.
	Position	Use the members of this enumeration to set the value of the GaugeTick.Position property.

	Shape	Define the shape for pointer.

### Public Constructors

	Name	Description
	C1GaugeExtender Constructor	

Top

### Public Properties

	Name	Description
	Animation	Gets or sets the gauge's animation.

	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the gauge automatically when resizing the gauge element.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Face	Gets or sets the gauge's face.
	Height	Gets or sets the height of the range.
	ID	(Inherited from System.Web.UI.Control)

	Islogarithmic	A value that indicates whether the gauge value is logarithmic mode.
	Labels	A value that indicate how to show the labels.
	LogarithmicBase	Gets or sets the LogarithmicBase of the gauge.
	MarginBottom	A value that gets or sets margin bottom of the gauge.
	MarginLeft	A value that gets or sets the margin left of the gauge.
	MarginRight	A value that gets or sets the margin right of the gauge.
	MarginTop	A value that gets or sets the margin top of the gauge.
	Max	Gets/sets the max value of the gauge.
	Min	Gets or set the min value of the gauge.
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pointer	Gets or set the pointer of the gauge.
	Ranges	Gets or sets the ranges of the radialGauge.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)

	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TickMajor	Gets or sets the tickMajor of the gauge.
	TickMinor	Gets or sets the tickMinor of the gauge.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	gets/sets the value of the gauge.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	Gets or sets the width of the gauge.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.

		(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Public Methods

	Name	Description
≡	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
≡	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
≡	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
≡	Focus	(Inherited from System.Web.UI.Control)
≡	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
≡	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
≡	HasControls	(Inherited from System.Web.UI.Control)
≡	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
≡	ResolveClientUrl	(Inherited from System.Web.UI.Control)
≡	ResolveUrl	(Inherited from System.Web.UI.Control)
≡	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

	Face	Gets or sets the gauge's face.
	Height	Gets or sets the height of the range.
	ID	(Inherited from System.Web.UI.Control)
	Islogarithmic	A value that indicates whether the gauge value is logarithmic mode.
	Labels	A value that indicate how to show the labels.
	LogarithmicBase	Gets or sets the LogarithmicBase of the gauge.
	MarginBottom	A value that gets or sets margin bottom of the gauge.
	MarginLeft	A value that gets or sets the margin left of the gauge.
	MarginRight	A value that gets or sets the margin right of the gauge.
	MarginTop	A value that gets or sets the margin top of the gauge.
	Max	Gets/sets the max value of the gauge.
	Min	Gets or set the min value of the gauge.
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pointer	Gets or set the pointer of the gauge.

	Ranges	Gets or sets the ranges of the radialGauge.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TickMajor	Gets or sets the tickMajor of the gauge.
	TickMinor	Gets or sets the tickMinor of the gauge.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)

	Value	gets/sets the value of the gauge.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	Gets or sets the width of the gauge.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)

C1.Web.Wijmo.Extenders.C1Gauge Namespace : C1LinearGaugeExtender Class

The following tables list the members exposed by C1LinearGaugeExtender.

### Public Constructors

	Name	Description
	C1LinearGaugeExtender Constructor	

Top

### Public Properties

	Name	Description
	Animation	Gets or sets the gauge's animation. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)

	AutoResize	A value that indicates whether to redraw the gauge automatically when resizing the gauge element. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Face	Gets or sets the gauge's face. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Height	Overridden.
	ID	(Inherited from System.Web.UI.Control)

	Islogarithmic	A value that indicates whether the gauge value is logarithmic mode. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Labels	A value that indicate how to show the labels. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	LogarithmicBase	Gets or sets the LogarithmicBase of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginBottom	A value that gets or sets margin bottom of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginLeft	A value that gets or sets the margin left of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginRight	A value that gets or sets the margin right of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginTop	A value that gets or sets the margin top of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Max	Gets/sets the max value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Min	Gets or set the min value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	NamingContainer	(Inherited from System.Web.UI.Control)

	Orientation	A value that indicates whether the gauge shows as horizontal or vertical.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pointer	Gets or set the pointer of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Ranges	Gets or sets the ranges of the radialGauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TickMajor	Gets or sets the tickMajor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)

	TickMinor	Gets or sets the tickMinor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	gets/sets the value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	Overridden.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	XAxisLength	Gets or sets the length of the xAxis.
	XAxisLocation	Gets or sets the xAxisLocation of the linear gauge

	YAxisLocation	Gets or sets the position of the yAxis
-----------------------------------------------------------------------------------	---------------	----------------------------------------

### Public Properties

	Name	Description
	Animation	Gets or sets the gauge's animation. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the gauge

		automatically when resizing the gauge element. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Face	Gets or sets the gauge's face. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Height	Overridden.
	ID	(Inherited from System.Web.UI.Control)
	Islogarithmic	A value that indicates whether the gauge value is logarithmic mode. (Inherited from

		C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Labels	A value that indicate how to show the labels. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	LogarithmicBase	Gets or sets the LogarithmicBase of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginBottom	A value that gets or sets margin bottom of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginLeft	A value that gets or sets the margin left of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginRight	A value that gets or sets the margin right of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginTop	A value that gets or sets the margin top of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Max	Gets/sets the max value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Min	Gets or set the min value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Orientation	A value that indicates whether the gauge shows as horizontal or vertical.

	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pointer	Gets or set the pointer of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Ranges	Gets or sets the ranges of the radialGauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TickMajor	Gets or sets the tickMajor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	TickMinor	Gets or sets the tickMinor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)

		C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	gets/sets the value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	Overridden.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	XAxisLength	Gets or sets the length of the xAxis.
	XAxisLocation	Gets or sets the xAxisLocation of the linear gauge
	YAxisLocation	Gets or sets the position of the yAxis

### Public Properties

	Name	Description
	Animation	Gets or sets the gauge's animation. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the gauge automatically when resizing the gauge element. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Cap	Gets or sets the cap of the gauge.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Face	Gets or sets the gauge's face. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Height	Overridden. Gets or sets the height of the radialGauge.
	ID	(Inherited from System.Web.UI.Control)
	Islogarithmic	A value that indicates whether the gauge value is logarithmic mode. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Labels	A value that indicate how to show the labels. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	LogarithmicBase	Gets or sets the LogarithmicBase of the gauge. (Inherited from

		C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginBottom	A value that gets or sets margin bottom of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginLeft	A value that gets or sets the margin left of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginRight	A value that gets or sets the margin right of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginTop	A value that gets or sets the margin top of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Max	Gets/sets the max value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Min	Gets or set the min value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Origin	Gets or sets the origin of the radialGauge.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pointer	Gets or set the pointer of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Radius	Gets or sets the radialGauge's radius.

	Ranges	Gets or sets the ranges of the radialGauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	StartAngle	Gets or sets the radialGauge's start angle.
	SweepAngle	Gets or sets the sweep angle of the radialGauge.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TickMajor	Gets or sets the tickMajor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	TickMinor	Gets or sets the tickMinor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	UniqueID	(Inherited from System.Web.UI.Control)

	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	gets/sets the value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	Overridden. Gets or sets the width of the radialGauge.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Properties

C1.Web.Wijmo.Extenders.C1Gauge Namespace : C1RadialGaugeExtender Class

For a list of all members of this type, see C1RadialGaugeExtender members.

## Public Properties

	Name	Description
	Animation	Gets or sets the gauge's animation. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the gauge automatically when resizing the gauge element. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Cap	Gets or sets the cap of the gauge.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Face	Gets or sets the gauge's face. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Height	Overridden. Gets or sets the height of the radialGauge.
	ID	(Inherited from System.Web.UI.Control)
	Islogarithmic	A value that indicates whether the gauge value is logarithmic mode. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Labels	A value that indicate how to show the labels. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	LogarithmicBase	Gets or sets the LogarithmicBase of the gauge. (Inherited from

		C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginBottom	A value that gets or sets margin bottom of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginLeft	A value that gets or sets the margin left of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginRight	A value that gets or sets the margin right of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	MarginTop	A value that gets or sets the margin top of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Max	Gets/sets the max value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Min	Gets or set the min value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Origin	Gets or sets the origin of the radialGauge.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pointer	Gets or set the pointer of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	Radius	Gets or sets the radialGauge's radius.

	Ranges	Gets or sets the ranges of the radialGauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	StartAngle	Gets or sets the radialGauge's start angle.
	SweepAngle	Gets or sets the sweep angle of the radialGauge.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TickMajor	Gets or sets the tickMajor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	TickMinor	Gets or sets the tickMinor of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	UniqueID	(Inherited from System.Web.UI.Control)

	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	gets/sets the value of the gauge. (Inherited from C1.Web.Wijmo.Extenders.C1Gauge.C1GaugeExtender)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	Overridden. Gets or sets the width of the radialGauge.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Overview

## Classes

	Class	Description
	C1Band	Contain that allows organizing columns into hierarchical structure. Used to create multilevel column headers.

	C1BaseField	The base class for bands and all columns.
	C1BaseFieldCollection	Represents a collection of C1BaseField objects.
	C1Field	Represents a base class for all data-bound fields.
	C1GridExtender	Extender for the <b>wijgrid</b> widget.
	CustomFilterOperator	Represents a custom filter operator.
	CustomFilterOperatorCollection	Represents a collection of CustomFilterOperator objects.
	DataOption	Determines the datasource of the C1.Web.Wijmo.Extenders.C1Grid.
	GroupInfo	GroupInfo is used to customize the appearance and position of groups.
	PagerSettings	Represents a pager settings.
	ScrollingSettings	Represents a scrolling settings.
	VirtualizationSettings	Represents a pager settings.

## Enumerations

	Enumeration	Description
	Aggregate	Use the members of this enumeration to set the value of the C1Field.Aggregate property.
	C1SortDirection	Use the members of this enumeration to set the value of the C1Field.SortDirection property in the C1Field class.
	ColumnsAutogenerationMode	Determines behavior for column autogeneration.
	EditingMode	Determines the editing mode.

	FieldDataType	Data type.
	FilterOperator	The FilterOperator enumeration.
	FilterOperatorsSortMode	Determines the order of items in the filter dropdown list.
	FreezingMode	Determines the freezing mode.
	GroupPosition	Determines the position of the group.
	IMEMode	Controls the state of the input method editor for text fields. Please refer to <a href="https://developer.mozilla.org/en-US/docs/Web/CSS/ime-mode">https://developer.mozilla.org/en-US/docs/Web/CSS/ime-mode</a> for more info.
	OutlineMode	Use the members of this enumeration to set the value of the GroupInfo.OutlineMode property in the GroupInfo class.
	PagerPosition	Specifies the position of the pager.
	RowMerge	Specifies row merging behaviour.
	ScrollMode	Determines the scrolling mode.
	SelectionMode	Represents selection behavior.
	VirtualizationMode	Determines the virtualization mode.

## Members

Properties Methods Events

C1.Web.Wijmo.Extenders.C1Grid Namespace : C1BaseFieldCollection Class

The following tables list the members exposed by C1BaseFieldCollection.

### Public Constructors

	Name	Description
	C1BaseFieldCollection Constructor	Initializes a new instance of the <b>C1BaseFieldCollection</b> class.

[Top](#)

### Public Properties

	Name	Description
	Count	Gets the number of elements actually contained in the collection. (Inherited from C1.Web.Wijmo.Extenders.Base.Collections.C1ObservableItemCollection<IColumnsContainer,C1BaseField>)
	Item	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	Owner	Gets the owner of the collection. (Inherited from C1.Web.Wijmo.Extenders.Base.Collections.C1ObservableItemCollection<IColumnsContainer,C1BaseField>)

[Top](#)

### Protected Properties

	Name	Description
	Events	Gets the events of the collection. (Inherited from C1.Web.Wijmo.Extenders.Base.Collections.C1ObservableItemCollection<IColumnsCon

ts	tainer,C1BaseField>)
 Items	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)

[Top](#)

## Public Methods

	Name	Description
	Add	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	Clear	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	Contains	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	CopyTo	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	GetEnumerator	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	IndexOf	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	Insert	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	Remove	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)
	RemoveAt	(Inherited from System.Collections.ObjectModel.Collection<C1BaseField>)

[Top](#)

## Protected Methods

	Name	Description
	ClearItems	Overridden. Removes all elements from the collection.
	InsertItem	Overridden. Inserts an element into the collection at the specified index.
	RemoveItem	Overridden. Removes the element at the specified index of the collection.
	SetItem	Overridden. Replaces the element at the specified index.

[Top](#)

## Public Events

	Name	Description
	Cleared	Fires after the item is cleared. (Inherited from C1.Web.Wijmo.Extenders.Base.Collections.C1ObservableItemCollection<IColumnsContainer,C1BaseField>)
	ItemAdded	Fires after the item is added. (Inherited from C1.Web.Wijmo.Extenders.Base.Collections.C1ObservableItemCollection<IColumnsContainer,C1BaseField>)
	ItemRemoved	Fires after the item is removed.. (Inherited from C1.Web.Wijmo.Extenders.Base.Collections.C1ObservableItemCollection<IColumnsContainer,C1BaseField>)
	ItemReplaced	Fires after the item is replaced. (Inherited from C1.Web.Wijmo.Extenders.Base.Collections.C1ObservableItemCollection<IColumnsContainer,C1BaseField>)

## ClearItems Method

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1BaseFieldCollection Class : ClearItems Method

Removes all elements from the collection.

### Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub ClearItems()
```

C#

```
protected override void ClearItems()
```

### See Also

C1BaseFieldCollection Class

C1BaseFieldCollection Members

## InsertItem Method

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1BaseFieldCollection Class : InsertItem Method

The zero-based index at which item should be inserted.

The element to insert.

Inserts an element into the collection at the specified index.

### Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub InsertItem(_
 ByVal index As System.Integer, _
 ByVal item As C1BaseField _
)
```

C#

```
protected override void InsertItem(
 System.int index,
 C1BaseField item
)
```

## Parameters

*index*

The zero-based index at which item should be inserted.

*item*

The element to insert.

## See Also

## Reference

C1BaseFieldCollection Class

C1BaseFieldCollection Members

## RemoveItem Method

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1BaseFieldCollection Class : RemoveItem Method

The zero-based index of the element to remove.

Removes the element at the specified index of the collection.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub RemoveItem( _     ByVal index As System.Integer _ )</pre>	
C#	
<pre>protected override void RemoveItem(     System.int index )</pre>	

## Parameters

*index*

The zero-based index of the element to remove.

## See Also

## Reference

C1BaseFieldCollection Class

C1BaseFieldCollection Members

## SetItem Method

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1BaseFieldCollection Class : SetItem Method

The zero-based index of the element to replace.

The new value for the element at the specified index.

Replaces the element at the specified index.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub SetItem(_
 ByVal index As System.Integer, _
 ByVal item As C1BaseField _
)
```

C#

```
protected override void SetItem(
 System.int index,
 C1BaseField item
)
```

## Parameters

*index*

The zero-based index of the element to replace.

*item*

The new value for the element at the specified index.

C1.Web.Wijmo.Extenders.C1Grid Namespace : C1Field Class

The following tables list the members exposed by C1Field.

## Public Constructors

	Name	Description
	C1Field Constructor	Initializes a new instance of the <b>C1Field</b> class.

[Top](#)

## Public Properties

	Name	Description
	Aggregate	Causes the grid to calculate aggregate values on the column and place them in the group header and footer rows.

	AllowMoving	A value indicating whether the column can be moved. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	AllowSizing	A value indicating whether the column can be sized. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	AllowSort	A value indicating whether column can be sorted.
	CellFormatter	Function used for changing content, style and attributes of the column cells. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	DataFormatString	A pattern used for formatting and parsing column values.
	DataKey	A value indicating the key of the data field associated with a column.
	DataParser	Data converter that is able to translate values from a string representation to column data type and back.
	DataType	Column data type. Used to determine the rules for sorting, grouping, aggregate calculation, and so on.
	EnsurePxWidth	Determines whether to use the Width option as the real width of the column. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	FilterOperator	An operation set for filtering. Must be either one of the embedded operators or custom filter operator.
	FilterValue	A value set for filtering.
	FooterText	Gets or sets the footer text. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	GroupInfo	Using to customize the appearance and position of groups.
	HeaderText	Gets or sets the header text. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	ImeMode	A value indicating the state of the input method editor for text fields.

	ReadOnly	A value indicating whether the cells in the column can be edited.
	RowMerge	Determines whether rows are merged.
	ShowFilter	A value indicating whether filter editor will be shown in the filter row.
	SortDirection	Determines the sort direction.
	ValueRequired	A value indicating whether null value is allowed during editing.
	Visible	A value indicating whether column is visible. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	Width	Determines the width of the column. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)

[Top](#)

## Protected Properties

	Name	Description
	Props	Gets a hashtable to store property info. (Inherited from C1.Web.Wijmo.Extenders.Settings)

[Top](#)

## Protected Methods

	Name	Description
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)
	OnFieldChanged	Raises an event signaling that the C1BaseField object's state has changed. (Inherited from C1.Web.Wijmo.Extenders.C1Grid.C1BaseField)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from

		C1.Web.Wijmo.Extenders.Settings)
	TestPropertyValue<V>	Tests the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)

## Aggregate Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : Aggregate Property

Causes the grid to calculate aggregate values on the column and place them in the group header and footer rows.

## Syntax

### Visual Basic (Declaration)

```
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<WidgetOptionAttribute()>
<System.ComponentModel.CategoryAttribute("Options")>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("Causes the grid to calculate aggregate values on the
column and place them in the group header and footer rows.")>
Public Property Aggregate As Aggregate
```

### C#

```
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[System.ComponentModel.NotifyParentProperty(true)]
[WidgetOption()]
[System.ComponentModel.Category("Options")]
[System.ComponentModel.DefaultValue()]
[C1Description("Causes the grid to calculate aggregate values on the column
and place them in the group header and footer rows.")]
public Aggregate Aggregate {get; set;}
```

## Remarks

If the grid does not contain any groups, setting the "aggregate" property has no effect.

## See Also

### Reference

C1Field Class

## AllowSort Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : AllowSort Property

A value indicating whether column can be sorted.

## Syntax

### Visual Basic (Declaration)

```
<System.ComponentModel.CategoryAttribute("Options")>
```

```
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("A value indicating whether column can be sorted.")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<WidgetOptionAttribute()>
Public Property AllowSort As System.Boolean
```

C#

```
[System.ComponentModel.Category("Options")]
[System.ComponentModel.DefaultValue()]
[C1Description("A value indicating whether column can be sorted.")]
[System.ComponentModel.NotifyParentProperty(true)]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[WidgetOption()]
public System.bool AllowSort {get; set;}
```

## DataFormatString Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : DataFormatString Property

A pattern used for formatting and parsing column values.

## Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("A pattern used for formatting and parsing column
values.")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
<System.ComponentModel.CategoryAttribute("Options")>
Public Property DataFormatString As System.String
```

C#

```
[C1Description("A pattern used for formatting and parsing column values.")]
```

```
[System.ComponentModel.NotifyParentProperty(true)]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[System.ComponentModel.Category("Options")]
public System.string DataFormatString {get; set;}
```

## Remarks

The default value is undefined ("n" pattern will be used for "number" dataType, "d" for "datetime", "c" for "currency").

See [globalize.min.js](#) for possible values.

C1Field Members

## DataKey Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : DataKey Property

A value indicating the key of the data field associated with a column.

## Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSerializationVisibility.Content)>
<C1DescriptionAttribute("A value indicating the key of the data field associated with a column.")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<System.Web.UI.PersistenceModeAttribute(PersistenceMode.InnerProperty)>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<System.ComponentModel.CategoryAttribute("Options")>
Public ReadOnly Property DataKey As ObjectValue
```

C#

```
[WidgetOption()]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializat
```

```
ionVisibility.Content)]
[C1Description("A value indicating the key of the data field associated
with a column.")]
[System.ComponentModel.NotifyParentProperty(true)]
[System.Web.UI.Persistencemode(Persistencemode.InnerProperty)]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[System.ComponentModel.Category("Options")]
public ObjectValue DataKey {get;}
```

## Remarks

If an array of hashes is used as a datasource for wijgrid, this should be string value, otherwise this should be an integer determining an index of the field in the datasource.

## DataParser Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : DataParser Property

Data converter that is able to translate values from a string representation to column data type and back.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;WidgetOptionNameAttribute("dataParser")&gt; &lt;System.ComponentModel.DefaultValueAttribute()&gt; &lt;C1DescriptionAttribute("Data converter that is able to translate values from a string representation to column data type and back.")&gt; &lt;System.ComponentModel.NotifyParentPropertyAttribute(True)&gt; &lt;WidgetEventAttribute()&gt; &lt;JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)&gt; &lt;System.ComponentModel.CategoryAttribute("Options")&gt; Public Property DataParser As System.String</pre>	
C#	
<pre>[WidgetOptionName("dataParser")] [System.ComponentModel.DefaultValue()]</pre>	

```
[C1Description("Data converter that is able to translate values from a string
representation to column data type and back.")]
[System.ComponentModel.NotifyParentProperty(true)]
[WidgetEvent()]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[System.ComponentModel.Category("Options")]
public System.string DataParser {get; set;}
```

## Remarks

The dataParser is an object which must contains the following methods: parseDOM(value, culture, format): converts given DOM element into the typed value. parse(value, culture, format): converts the value into typed value. toStr(value, culture, format): converts the value into its string representation.

## ImeMode Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : ImeMode Property

A value indicating the state of the input method editor for text fields.

### Syntax

Visual Basic (Declaration)

```
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("A value indicating the state of the input method
editor for text fields.")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<WidgetOptionAttribute()>
<System.ComponentModel.CategoryAttribute("Options")>
Public Property ImeMode As IMEMode
```

C#

```
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[System.ComponentModel.DefaultValue()]
[C1Description("A value indicating the state of the input method editor for
text fields.")]
[System.ComponentModel.NotifyParentProperty(true)]
[WidgetOption()]
[System.ComponentModel.Category("Options")]
public IMEMode ImeMode {get; set;}
```

## ReadOnly Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : ReadOnly Property

A value indicating whether the cells in the column can be edited.

### Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("A value indicating whether the cells in the column
can be edited.")>
<System.ComponentModel.CategoryAttribute("Options")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<System.ComponentModel.DefaultValueAttribute()>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<WidgetOptionAttribute()>
Public Property ReadOnly As System.Boolean
```

C#

```
[C1Description("A value indicating whether the cells in the column can be
edited.")]
[System.ComponentModel.Category("Options")]
[System.ComponentModel.NotifyParentProperty(true)]
[System.ComponentModel.DefaultValue()]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[WidgetOption()]
public System.bool ReadOnly {get; set;}
```

## ShowFilter Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : ShowFilter Property

A value indicating whether filter editor will be shown in the filter row.

## Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("A value indicating whether filter editor will be
shown in the filter row.")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<WidgetOptionAttribute()>
<System.ComponentModel.CategoryAttribute("Options")>
<System.ComponentModel.DefaultValueAttribute()>
Public Property ShowFilter As System.Boolean
```

C#

```
[C1Description("A value indicating whether filter editor will be shown in the
filter row.")]
[System.ComponentModel.NotifyParentProperty(true)]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[WidgetOption()]
[System.ComponentModel.Category("Options")]
[System.ComponentModel.DefaultValue()]
```

```
public System.bool ShowFilter {get; set;}

## SortDirection Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1Field Class : SortDirection Property

Determines the sort direction.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<System.ComponentModel.CategoryAttribute("Options")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("Determines the sort direction.")>
Public Property SortDirection As C1SortDirection
```

C#

```
[System.ComponentModel.NotifyParentProperty(true)]
[System.ComponentModel.Category("Options")]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[C1Description("Determines the sort direction.")]
public C1SortDirection SortDirection {get; set;}
```

## Members

Properties Methods Events

C1.Web.Wijmo.Extenders.C1Grid Namespace : C1GridExtender Class

The following tables list the members exposed by C1GridExtender.

## Public Constructors

	Name	Description
	C1GridExtender Constructor	Initializes a new instance of the <b>C1GridExtender</b> class.

Top

## Public Properties

	Name	Description
	AllowColMoving	A value indicating whether columns can be moved.
	AllowColSizing	A value indicating whether columns can be sized.
	AllowEditing	A value indicating whether editing is enabled. This property is obsolete. Use <b>EditingMode</b> instead.
	AllowKeyboardNavigation	A value indicating whether keyboard navigation is allowed.
	AllowPaging	A value indicating whether the widget can be paged.
	AllowSorting	A value indicating whether the widget can be sorted.
	AlwaysParseData	Determines whether wijgrid should parse underlying data at each operation requiring data re-fetching, like calling the ensureControl(true) method, paging, sorting, etc. If the option is disabled, wijgrid parses data only at the first fetch. The option is ignored if dynamic data load feature is used, in this case data are always parsed.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	CellStyleFormatter	Function used for styling the cells in wijgrid.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Columns	An array of column options.
	ColumnsAutogenerationMode	Determines behavior for column autogeneration.
	Controls	(Inherited from System.Web.UI.Control)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property.
	CustomFilterOperators	An array of custom user filters.
	Data	Determines the datasource.
	DataMember	Gets or sets the name of the list or table in the data source for which the C1GridExtender is displaying data.
	EditingMode	Determines the editing mode.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableConditionalDependencies	Overridden. A value that indicates whether to register the dependency resources according to the control's property settings.
	EnableTheming	(Inherited from System.Web.UI.Control)

	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureColumnsPxWidth	Determines whether to use number type column width as the real width of the column.
	FilterOperatorsSortMode	Determines the order of items in the filter dropdown list.
	GroupAreaCaption	Determines the caption of the group area.
	GroupIndent	Determines the indentation of the groups.
	HighlightCurrentCell	Determines whether position of the current cell is highlighted or not.
	ID	(Inherited from System.Web.UI.Control)
	LoadingText	Determines the text to be displayed when the grid is loading.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NullString	Cell values equal to this property value are considered as null value.
	OnClientAfterCellEdit	A function called after editing is completed.
	OnClientAfterCellUpdate	A function called after a cell has been updated.
	OnClientAjaxError	A function called when wijgrid is bound to remote data and the ajax request fails.
	OnClientBeforeCellEdit	A function called before a cell enters edit mode. Cancellable.
	OnClientBeforeCellUpdate	A function called before a cell is updated.
	OnClientColumnDragged	A function called when column dragging has been

		started.
	OnClientColumnDragging	A function called when column dragging is started, but before wijgrid handles the operation. Cancellable.
	OnClientColumnDropped	A function called when column has been dropped.
	OnClientColumnDropping	A function called when column is dropped, but before wijgrid handles the operation. Cancellable.
	OnClientColumnGrouped	A function called when column has been dropped.
	OnClientColumnGrouping	A function called when column is dropped into the group area, but before wijgrid handles the operation. Cancellable.
	OnClientColumnResized	A function called when column has been resized.
	OnClientColumnResizing	A function called when column is resized, but before wijgrid handles the operation. Cancellable.
	OnClientColumnUngrouped	A function called when column has been removed from the group area.
	OnClientColumnUngrouping	A function called when column is removed from the group area, but before wijgrid handles the operation. Cancellable.
	OnClientCurrentCellChanged	A function called after the current cell is changed.
	OnClientCurrentCellChanging	A function called before the current cell is changed. Cancellable.
	OnClientDataLoaded	A function called when data are loaded.
	OnClientDataLoading	A function called when wijgrid loads a portion of data

		from the underlying datasource.
	OnClientFilterOperatorsListShowing	A function called before the filter drop-down list is shown.
	OnClientGroupAggregate	A function called when groups are being created and the "aggregate" option of the column object has been set to "custom".
	OnClientGroupText	A function called when groups are being created and the groupInfo.headerText or groupInfo.footerText of the groupInfo option has been set to "custom".
	OnClientInvalidCellValue	A function called when a cell needs to start updating but the cell value is invalid.
	OnClientLoaded	A function called at the end the wijgrid's lifecycle when wijgrid is filled with data and rendered.
	OnClientLoading	A function called at the beginning of the wijgrid's lifecycle.
	OnClientPageIndexChanged	A function called after page index is changed.
	OnClientPageIndexChanging	A function called before page index is changed. Cancellable.
	OnClientRendered	A function called when wijgrid is rendered.
	OnClientRendering	A function called when wijgrid is about to render.
	OnClientSelectionChanged	A function called after the selection is changed.
	OnClientSorted	A function called after the widget is sorted.
	OnClientSorting	A function called before the sorting operation is started. Cancellable.

	Page	(Inherited from System.Web.UI.Control)
	PageIndex	Determines the zero-based index of the current page.
	PagerSettings	Pager settings.
	PageSize	Number of rows to place on a single page.
	Parent	(Inherited from System.Web.UI.Control)
	ReadAttributesFromData	A value indicating whether DOM cell attributes can be passed within a data values.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	RowStyleFormatter	Function used for styling the rows in wijgrid.
	ScrollingSettings	Scrolling settings.
	SelectionMode	Represents selection behavior.
	ShowFilter	A value indicating whether filter row is visible.
	ShowFooter	A value indicating whether footer row is visible.
	ShowGroupArea	A value indicating whether group area is visible.
	ShowRowHeader	A value indicating whether the row header is visible.
	ShowSelectionOnRender	A value indicating whether a selection will be automatically displayed at the current cell position when the wijgrid is rendered.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)

	StaticColumnIndex	Use ScrollingSettings.StaticColumnIndex property instead.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery

		Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)

	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)

	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided

		<b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
💡	ResolveAdapter	(Inherited from System.Web.UI.Control)
💡	SaveViewState	(Inherited from System.Web.UI.Control)
💡	SetDesignModeState	(Inherited from System.Web.UI.Control)
💡	TrackViewState	(Inherited from System.Web.UI.Control)

	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)

	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.

	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e</pre>	

)

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

## Reference

C1GridExtender Class

C1GridExtender Members

## Render Method

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

## Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Properties

For a list of all members of this type, see C1GridExtender members.

### Public Properties

	Name	Description
	AllowColMoving	A value indicating whether columns can be moved.
	AllowColSizing	A value indicating whether columns can be sized.
	AllowEditing	A value indicating whether editing is enabled. This property is obsolete. Use <b>EditingMode</b> instead.
	AllowKeyboardNavigation	A value indicating whether keyboard navigation is allowed.
	AllowPaging	A value indicating whether the widget can be paged.
	AllowSorting	A value indicating whether the widget can be sorted.
	AlwaysParseData	Determines whether wijgrid should parse underlying data at each operation requiring data re-fetching, like calling the ensureControl(true) method, paging, sorting, etc. If the option is disabled, wijgrid parses data only at the first fetch. The option is ignored if dynamic data load feature is used, in this case data are always parsed.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CellStyleFormatter	Function used for styling the cells in wijgrid.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Columns	An array of column options.
	ColumnsAutogenerationMode	Determines behavior for column autogeneration.
	Controls	(Inherited from System.Web.UI.Control)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property.
	CustomFilterOperators	An array of custom user filters.
	Data	Determines the datasource.
	DataMember	Gets or sets the name of the list or table in the data source for which the C1GridExtender is displaying data.
	EditMode	Determines the editing mode.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableConditionalDependencies	Overridden. A value that indicates whether to register the dependency resources according to the control's

		property settings.
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureColumnsPxWidth	Determines whether to use number type column width as the real width of the column.
	FilterOperatorsSortMode	Determines the order of items in the filter dropdown list.
	GroupAreaCaption	Determines the caption of the group area.
	GroupIndent	Determines the indentation of the groups.
	HighlightCurrentCell	Determines whether position of the current cell is highlighted or not.
	ID	(Inherited from System.Web.UI.Control)
	LoadingText	Determines the text to be displayed when the grid is loading.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NullString	Cell values equal to this property value are considered as null value.
	OnClientAfterCellEdit	A function called after editing is completed.
	OnClientAfterCellUpdate	A function called after a cell has been updated.
	OnClientAjaxError	A function called when wijgrid is bound to remote data and the ajax request fails.
	OnClientBeforeCellEdit	A function called before a cell enters edit mode. Cancellable.

	OnClientBeforeCellUpdate	A function called before a cell is updated.
	OnClientColumnDragged	A function called when column dragging has been started.
	OnClientColumnDragging	A function called when column dragging is started, but before wijgrid handles the operation. Cancellable.
	OnClientColumnDropped	A function called when column has been dropped.
	OnClientColumnDropping	A function called when column is dropped, but before wijgrid handles the operation. Cancellable.
	OnClientColumnGrouped	A function called when column has been dropped.
	OnClientColumnGrouping	A function called when column is dropped into the group area, but before wijgrid handles the operation. Cancellable.
	OnClientColumnResized	A function called when column has been resized.
	OnClientColumnResizing	A function called when column is resized, but before wijgrid handles the operation. Cancellable.
	OnClientColumnUngrouped	A function called when column has been removed from the group area.
	OnClientColumnUngrouping	A function called when column is removed from the group area, but before wijgrid handles the operation. Cancellable.
	OnClientCurrentCellChanged	A function called after the current cell is changed.
	OnClientCurrentCellChanging	A function called before the current cell is changed. Cancellable.

	OnClientDataLoaded	A function called when data are loaded.
	OnClientDataLoading	A function called when wijgrid loads a portion of data from the underlying datasource.
	OnClientFilterOperatorsListShowing	A function called before the filter drop-down list is shown.
	OnClientGroupAggregate	A function called when groups are being created and the "aggregate" option of the column object has been set to "custom".
	OnClientGroupText	A function called when groups are being created and the groupInfo.headerText or groupInfo.footerText of the groupInfo option has been set to "custom".
	OnClientInvalidCellValue	A function called when a cell needs to start updating but the cell value is invalid.
	OnClientLoaded	A function called at the end the wijgrid's lifecycle when wijgrid is filled with data and rendered.
	OnClientLoading	A function called at the beginning of the wijgrid's lifecycle.
	OnClientPageIndexChanged	A function called after page index is changed.
	OnClientPageIndexChanging	A function called before page index is changed. Cancellable.
	OnClientRendered	A function called when wijgrid is rendered.
	OnClientRendering	A function called when wijgrid is about to render.
	OnClientSelectionChanged	A function called after the selection is changed.
	OnClientSorted	A function called after the widget is sorted.

	OnClientSorting	A function called before the sorting operation is started. Cancellable.
	Page	(Inherited from System.Web.UI.Control)
	PageIndex	Determines the zero-based index of the current page.
	PagerSettings	Pager settings.
	PageSize	Number of rows to place on a single page.
	Parent	(Inherited from System.Web.UI.Control)
	ReadAttributesFromData	A value indicating whether DOM cell attributes can be passed within a data values.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	RowStyleFormatter	Function used for styling the rows in wijgrid.
	ScrollingSettings	Scrolling settings.
	SelectionMode	Represents selection behavior.
	ShowFilter	A value indicating whether filter row is visible.
	ShowFooter	A value indicating whether footer row is visible.
	ShowGroupArea	A value indicating whether group area is visible.
	ShowRowHeader	A value indicating whether the row header is visible.
	ShowSelectionOnRender	A value indicating whether a selection will be automatically displayed at the current cell position when the wijgrid is rendered.
	Site	(Inherited from System.Web.UI.Control)

	SkinID	(Inherited from System.Web.UI.Control)
	StaticColumnIndex	Use ScrollingSettings.StaticColumnIndex property instead.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)

	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## AlwaysParseData Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : AlwaysParseData Property

Determines whether wijgrid should parse underlying data at each operation requiring data re-fetching, like calling the ensureControl(true) method, paging, sorting, etc. If the option is disabled, wijgrid parses data only at the first fetch. The option is ignored if dynamic data load feature is used, in this case data are always parsed.

## Syntax

### Visual Basic (Declaration)

```
<C1DescriptionAttribute("Determines whether wijgrid should parse underlying
data at each operation requiring data re-fetching, like calling the
ensureControl(true) method, paging, sorting, etc.")>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
<System.ComponentModel.CategoryAttribute("Options")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
Public Property AlwaysParseData As System.Boolean
```

### C#

```
[C1Description("Determines whether wijgrid should parse underlying data at
each operation requiring data re-fetching, like calling the
ensureControl(true) method, paging, sorting, etc.")]
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[System.ComponentModel.Category("Options")]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
public System.bool AlwaysParseData {get; set;}
```

## Remarks

Turning off the option enhance wijgrid performance but if underlying data are changed by a developer it is necessary that changes match column datatype.

## OnClientAfterCellEdit Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : OnClientAfterCellEdit Property

A function called after editing is completed.

## Syntax

### Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<WidgetEventAttribute("e, args")>
<C1DescriptionAttribute("A function called after editing is completed.")>
<C1CategoryAttribute("Client-Side Events")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
Public Property OnClientAfterCellEdit As System.String
```

C#

```
[System.ComponentModel.DefaultValue()]
[WidgetEvent("e, args")]
[C1Description("A function called after editing is completed.")]
[C1Category("Client-Side Events")]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
public System.string OnClientAfterCellEdit {get; set;}
```

## Remarks

Parameters:

- jQuery.Event object.
- The data with this event.
  - Gets the edited cell's information.
  - Event that initiated the cell updating.
  - Gets or sets value determining whether the developer finalizes editing of the cell manually. The default value is false which means that the widget will try to finalize editing of the cell automatically. If the developer provides a custom editing front end then this property must be set to true.

## OnClientAjaxError Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : OnClientAjaxError Property

A function called when wijgrid is bound to remote data and the ajax request fails.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<WidgetEventAttribute("e, args")>
<C1DescriptionAttribute("A function called when wijgrid is bound to remote
data and the ajax request fails.")>
<System.ComponentModel.CategoryAttribute("Client Events")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
Public Property OnClientAjaxError As System.String
```

C#

```
[System.ComponentModel.DefaultValue()]
[WidgetEvent("e, args")]
[C1Description("A function called when wijgrid is bound to remote data and
the ajax request fails.")]
[System.ComponentModel.Category("Client Events")]
```

```
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
public System.string OnClientAjaxError {get; set;}
```

## Remarks

Parameters:

- jQuery.Event object.
- The data with this event.
  - The XMLHttpRequest object.
  - A string describing the error type.
  - An exception object.

Refer to the `jQuery.ajax.error` event documentation for more details on this arguments.

## OnClientBeforeCellEdit Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : OnClientBeforeCellEdit Property

A function called before a cell enters edit mode. Cancellable.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Client-Side Events")>
<WidgetEventAttribute("e, args")>
<C1DescriptionAttribute("A function called before a cell enters edit mode.
Cancellable.")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
Public Property OnClientBeforeCellEdit As System.String
```

C#

```
[System.ComponentModel.DefaultValue()]
[C1Category("Client-Side Events")]
[WidgetEvent("e, args")]
[C1Description("A function called before a cell enters edit mode.
Cancellable.")]
```

```
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
public System.string OnClientBeforeCellEdit {get; set;}
```

## Remarks

Parameters:

- jQuery.Event object.
- The data with this event.
  - Information about the cell to be edited.
  - Event initiated cell editing.
  - Gets or sets a value determining whether developer initiates cell editor(s) manually. The default value is false which means that widget will trying to provide editing control automatically. If cells contain custom controls or if developer wants to provide a custom editing front end then he must set this property to true.

## OnClientBeforeCellUpdate Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : OnClientBeforeCellUpdate Property

A function called before a cell is updated.

## Syntax

Visual Basic (Declaration)

```
<WidgetEventAttribute("e, args")>
<C1CategoryAttribute("Client-Side Events")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("A function called before a cell is updated.")>
Public Property OnClientBeforeCellUpdate As System.String
```

C#

```
[WidgetEvent("e, args")]
[C1Category("Client-Side Events")]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[System.ComponentModel.DefaultValue()]
[C1Description("A function called before a cell is updated.")]
```

```
public System.string OnClientBeforeCellUpdate {get; set;}
```

## Remarks

Parameters:

- jQuery.Event object.
- The data with this event.
  - Gets information of the edited cell.
  - Returns the new cell value. If the property value is not changed the widget will try to extract the new cell value automatically. If the developer provides custom editing front end then the new cell value must be returned within this property.

## OnClientFilterOperatorsListShowing Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : OnClientFilterOperatorsListShowing Property

A function called before the filter drop-down list is shown.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Client-Side Events")>
<WidgetEventAttribute("e, args")>
<C1DescriptionAttribute("A function called before the filter drop-down list
is shown.")>
<System.ComponentModel.DefaultValueAttribute()>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
Public Property OnClientFilterOperatorsListShowing As System.String
```

C#

```
[C1Category("Client-Side Events")]
[WidgetEvent("e, args")]
[C1Description("A function called before the filter drop-down list is
shown.")]
[System.ComponentModel.DefaultValue()]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
public System.string OnClientFilterOperatorsListShowing {get; set;}
```

## Remarks

Parameters:

- jQuery.Event object.
- The data with this event.
  - Associated column.
  - An array of filter operators.

## OnClientGroupAggregate Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : OnClientGroupAggregate Property

A function called when groups are being created and the "aggregate" option of the column object has been set to "custom".

## Syntax

Visual Basic (Declaration)

```
<WidgetEventAttribute("e, args")>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("A function called when groups are being created and
the "aggregate" option of the column object has been set to "custom".")>
<C1CategoryAttribute("Client-Side Events")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
Public Property OnClientGroupAggregate As System.String
```

C#

```
[WidgetEvent("e, args")]
[System.ComponentModel.DefaultValue()]
```

```
[C1Description("A function called when groups are being created and the
"aggregate" option of the column object has been set to "custom".")]
[C1Category("Client-Side Events")]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
public System.string OnClientGroupAggregate {get; set;}
```

## Remarks

Parameters:

- jQuery.Event object.
- The data with this event.
  - Data object.
  - Column that is being grouped.
  - Column initiated grouping.
  - Text that is being grouped.
  - Text that will be displayed in the group header or group footer.
  - First index for the data being grouped.
  - Last index for the data being grouped.
  - Indicates whether row that is being grouped is a group header or not.

## ReadAttributesFromData Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > C1GridExtender Class : ReadAttributesFromData Property

A value indicating whether DOM cell attributes can be passed within a data values.

## Syntax

Visual Basic (Declaration)

```
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
```

```
<System.ComponentModel.CategoryAttribute("Options")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetOptionAttribute()>
<C1DescriptionAttribute("A value indicating whether DOM cell attributes can
be passed within a data values.")>
Public Property ReadAttributesFromData As System.Boolean
```

C#

```
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[System.ComponentModel.Category("Options")]
[System.ComponentModel.DefaultValue()]
[WidgetOption()]
[C1Description("A value indicating whether DOM cell attributes can be passed
within a data values.")]
public System.bool ReadAttributesFromData {get; set;}
```

## Remarks

This option allows binding collection of values to data and automatically converting them as attributes of corresponded DOM table cells during rendering. Values should be passed as an array of two items, where first item is a value of the data field, the second item is a list of values.

If DOM table is used as a datasource then attributes belonging to the cells in tBody section of the original table will be read and applied to the new cells.

GroupInfo Class

GroupInfo Members

## ExpandedImageClass Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > GroupInfo Class : ExpandedImageClass Property

Determines the css used to show expanded nodes on the grid.

## Syntax

### Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<WidgetOptionAttribute()>
<C1CategoryAttribute("Style")>
```

```
<C1DescriptionAttribute("Determines the css used to show expanded nodes on
the grid.")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
Public Property ExpandedImageClass As System.String
```

C#

```
[System.ComponentModel.DefaultValue()]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[WidgetOption()]
[C1Category("Style")]
[C1Description("Determines the css used to show expanded nodes on the
grid.")]
[System.ComponentModel.NotifyParentProperty(true)]
public System.string ExpandedImageClass {get; set;}
```

## See Also

### Reference

GroupInfo Class

GroupInfo Members

## FooterText Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > GroupInfo Class : FooterText Property

Determines the text that is displayed in the group footer rows.

## Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<C1CategoryAttribute("Appearance")>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("Determines the text that is displayed in the group
footer rows.")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
Public Property FooterText As System.String
```

C#

```
[WidgetOption()]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
```

```
[C1Category("Appearance")]
[System.ComponentModel.DefaultValue()]
[C1Description("Determines the text that is displayed in the group footer
rows.")]
[System.ComponentModel.NotifyParentProperty(true)]
public System.string FooterText {get; set;}
```

## Remarks

The text may include up to three placeholders: "{0}" is replaced with the value being grouped on. "{1}" is replaced with the group's column header. "{2}" is replaced with the aggregate

The text may be set to "custom". Doing so causes the OnClientGroupText event to be raised when processing a grouped footer.

## OutlineMode Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > GroupInfo Class : OutlineMode Property

Determines whether the user will be able to collapse and expand the groups by clicking on the group headers, and also determines whether groups will be initially collapsed or expanded.

## Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("Determines whether the user will be able to collapse
and expand the groups by clicking on the group headers, and also determines
whether groups will be initially collapsed or expanded.")>
Public Property OutlineMode As OutlineMode
```

C#

```
[WidgetOption()]
[System.ComponentModel.NotifyParentProperty(true)]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
[C1Description("Determines whether the user will be able to collapse and
expand the groups by clicking on the group headers, and also determines
whether groups will be initially collapsed or expanded.")]
public OutlineMode OutlineMode {get; set;}
```

## StaticColumnIndex Property

C1.Web.Wijmo.Extenders.C1Grid Namespace > ScrollingSettings Class : StaticColumnIndex Property

Indicates the index of columns that will always be shown on the left when the grid is scrolled horizontally.

### Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("Indicates the index of columns that will always be
shown on the left when the grid is scrolled horizontally.")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
<WidgetOptionAttribute()>
Public Property StaticColumnIndex As System.Integer
```

C#

```
[C1Category("Behavior")]
[System.ComponentModel.NotifyParentProperty(true)]
[System.ComponentModel.DefaultValue()]
[C1Description("Indicates the index of columns that will always be shown on
the left when the grid is scrolled horizontally.")]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
[WidgetOption()]
public System.int StaticColumnIndex {get; set;}
```

### Property Value

Default value is -1.

### Remarks

Note that all columns before the static column will be automatically marked as static too. It can only take effect when Mode is not "None"/>. It will be considered as -1 in a hierarchical grid or when grouping or row merging is enabled. -1 means no data column but row header is static. 0 means one data column and row header are static.

## Property Value

Default value is -1.

## Remarks

Note, that all rows before the static row will be automatically marked as static too. It can only take effect when Mode is not "None"/>. It will be considered as -1 in a hierarchical grid or when grouping or row merging is enabled. -1 means no data row but header row is static. 0 means one data row and header row are static.

## Enumerations

## Aggregate

Use the members of this enumeration to set the value of the `C1Field.Aggregate` property.

## Syntax

Visual Basic (Declaration)	
<pre>Public Enum Aggregate     Inherits System.Enum</pre>	
C#	
<pre>public enum Aggregate : System.Enum</pre>	

## Members

Member	Description
<b>Average</b>	Average of the numerical values.
<b>Count</b>	Count of non-empty values.
<b>Custom</b>	Custom value (causing grid to throw the C1GridExtender.OnClientGroupAggregate event).
<b>Max</b>	Maximum value (numerical, string, or date).
<b>Min</b>	Minimum value (numerical, string, or date).
<b>None</b>	No aggregate is calculated or displayed.
<b>Std</b>	Standard deviation (using formula for Sample, n-1).
<b>StdPop</b>	Standard deviation (using formula for Population, n).
<b>Sum</b>	Sum of numerical values.
<b>Var</b>	Variance (using formula for Sample, n-1).
<b>VarPop</b>	Variance (using formula for Population, n).

## Overview

### Classes

	Class	Description
	C1InputDateExtender	InputDate Extender.
	C1InputExtenderBase	Base class for C1InputMaskExtender, C1InputDateExtender, C1InputNumberExtender, C1InputCurrencyExtender and C1InputPercentExtender.

	C1InputMaskExtender	InputMask Extender.
	C1InputNumberExtender	InputNumber Extender.
	C1InputTextExtender	
	DatePicker	Sepcifes the setings of the dropdown date picker.
	DatePickers	Specifies the setings of the dropdown list and dropdown calendar.
	DropDownCalendar	Sepcifes the setings of the dropdown calendar.
	LocalizationOption	Localization strings.
	Pickers	Specifies the settings of the drop down list.
	TimePicker	Sepcifes the setings of the dropdown time picker.

## Enumerations

	Enumeration	Description
	BlurOnLeftRightKey	Specifies the action for left / right arrow key
	ButtonAlign	Enumeration that determines the alignment of trigger and spinner buttons of input.
	EllipsisMode	Specifies the mode of the ellipsis (...) to display.
	FormatMode	Enumeration that determines the format mode of the mask format.
	HighlightText	Specifies the type of selection text in control
	ImeMode	Specifies whether IME mode should be supported.
	NumberType	Enumeration that determines the type of the number input.

	SpinnerAlign	Enumeration that determines the alignment of spinner buttons of input.
	TabAction	Specifies how the tab key works

## Public Constructors

	Name	Description
	C1InputDateExtender Constructor	Initializes a new instance of the C1InputDateExtender class.

[Top](#)

## Public Properties

	Name	Description
	ActiveField	Determines the active field index.
	AllowSpinLoop	Determines whether allow the spin behavior loop. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	AmDesignator	Gets or sets the IME mode.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoNextField	Determines whether the focus moves automatically to the next field.
	BlurOnLastChar	Gets or sets whether or not the next control in the tab order receives the focus as soon as the control is filled at the last character. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

	Calendar	Determines the calendar element for a date input.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Date	Determines the default date value for a date input.
	DateFormat	Determines the format pattern used to display the date value.
	DisplayFormat	Determines the format pattern used to display the date value.
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HighlightText	Gets or sets how to select the text when the control receives the focus.
	Hour12As0	Gets or sets the range of hours that can be entered in the control.
	ID	(Inherited from System.Web.UI.Control)
	ImeMode	Gets or sets the IME mode. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Increment	Determines how much to increase/decrease the active field when performing spin on the the active field.
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	KeyDelay	Determines the time span, in milliseconds, between two input intentions.
	Localization	Use the Localization property in order to customize

		localization strings.
	MaxDate	Determines the maximum date that can be entered.
	MidnightAs0	Gets or sets whether to express midnight as 24:00.
	MinDate	Determines the minimal date that can be entered.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDateChanged	Occurs after the date value changed.
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitializing	Occurs before the widget is initialized. (Inherited from

		C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientSpinDown	Occurs when the spindown button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientSpinUp	Occurs when the spinup button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientValueBoundsExceeded	Occurs after the date value changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pickers	Get an object that contains the settings for the dropdown window.
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from

		C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	PmDesignator	Gets or sets the IME mode.
	PopupPosition	Determines the position where the calendar will appear.
	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	ShowSpinner	Determines whether the spinner button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SmartInputMode	Allows smart input behavior.
	SpinnerAlign	Determines the spin button alignment. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	StartYear	Determines the value of the starting year to be used

		for the smart input year calculation.
	TabAction	Gets or sets the tab action.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery

		Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputDateExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub OnPreRender(_
 ByVal e As System.EventArgs _
```

)	
C#	
protected override void OnPreRender( System.EventArgs e )	

#### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

#### Reference

## Render Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputDateExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub Render( _ ByVal <i>writer</i> As System.Web.UI.HtmlTextWriter _ )	
C#	
protected override void Render( System.Web.UI.HtmlTextWriter <i>writer</i> )	

#### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Public Properties

	Name	Description
	ActiveField	Determines the active field index.
	AllowSpinLoop	Determines whether allow the spin behavior loop. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	AmDesignator	Gets or sets the IME mode.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoNextField	Determines whether the focus moves automatically to the next field.
	BlurOnLastChar	Gets or sets whether or not the next control in the tab order receives the focus as soon as the control is filled at the last character. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	Calendar	Determines the calendar element for a date input.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Date	Determines the default date value for a date input.
	DateFormat	Determines the format pattern used to display the date value.
	DisplayFormat	Determines the format pattern used to display the date value.
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HighlightText	Gets or sets how to select the text when the control receives the focus.
	Hour12As0	Gets or sets the range of hours that can be entered in the control.
	ID	(Inherited from System.Web.UI.Control)
	ImeMode	Gets or sets the IME mode. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Increment	Determines how much to increase/decrease the active field when performing spin on the the active field.
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	KeyDelay	Determines the time span, in milliseconds, between

		two input intentions.
	Localization	Use the Localization property in order to customize localization strings.
	MaxDate	Determines the maximum date that can be entered.
	MidnightAs0	Gets or sets whether to express midnight as 24:00.
	MinDate	Determines the minimal date that can be entered.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDateChanged	Occurs after the date value changed.
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	OnClientInitializing	Occurs before the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientSpinDown	Occurs when the spindown button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientSpinUp	Occurs when the spinup button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientValueBoundsExceeded	Occurs after the date value changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)

	Pickers	Get an object that contains the settings for the dropdown window.
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	PmDesignator	Gets or sets the IME mode.
	PopupPosition	Determines the position where the calendar will appear.
	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	ShowSpinner	Determines whether the spinner button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SmartInputMode	Allows smart input behavior.
	SpinnerAlign	Determines the spin button alignment. (Inherited from

		C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	StartYear	Determines the value of the starting year to be used for the smart input year calculation.
	TabAction	Gets or sets the tab action.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## DateFormat Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputDateExtender Class : DateFormat Property

Determines the format pattern used to display the date value.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Behavior")>
<C1DescriptionAttribute("Determines the format pattern used to display the
date value.")>
<WidgetOptionAttribute()>
Public Property DateFormat As System.String
```

C#

```
[System.ComponentModel.DefaultValue()]
[C1Category("Behavior")]
[C1Description("Determines the format pattern used to display the date
value.")]
[WidgetOption()]
public System.string DateFormat {get; set;}
```

## Remarks

C1InputDate supports two types of formats: Standard Format and Custom Format. A standard date and time format string uses a single format specifier to define the text representation of a date and time value. Possible values for Standard Format are: "d": ShortDatePattern "D": LongDatePattern "f": Full date and time (long date and short time) "F": FullDateTimePattern "g": General (short date and short time) "G": General (short date and long time) "m": MonthDayPattern "M": monthDayPattern "r": RFC1123Pattern "R": RFC1123Pattern "s": SortableDateTimePattern "t": shortTimePattern "T": LongTimePattern "u": UniversalSortableDateTimePattern "U": Full date and time (long date and long time) using universal time "y": YearMonthPattern "Y": yearMonthPattern Any date and time format string that contains more than one character, including white space, is interpreted as a custom date and time format string. For example: "mmm-dd-yyyy", "mmmm d, yyyy", "mm/dd/yyyy", "d-mmm-yyyy", "ddd, mmmm dd, yyyy" etc. Below are the custom date and time format specifiers:

"d": The day of the month, from 1 through 31. "dd": The day of the month, from 01 through 31. "ddd": The abbreviated name of the day of the week. "dddd": The full name of the day of the week. "m": The minute, from 0 through 59. "mm": The minute, from 00 through 59. "M": The month, from 1 through 12. "MM": The month, from 01 through 12. "MMM": The abbreviated name of the month. "MMMM": The full name of the month. "y": The year, from 0 to 99. "yy": The year, from 00 to 99. "yyy": The year, with a minimum of three digits. "yyyy": The year as a four-digit number. "h": The hour, using a 12-hour clock from 1 to 12. "hh": The hour, using a 12-hour clock from 01 to 12. "H": The hour, using a 24-hour clock from 0 to 23. "HH": The hour, using a 24-hour clock from 00 to 23. "s": The second, from 0 through 59. "ss": The second, from 00 through 59. "t": The first character of the AM/PM designator. "tt": The AM/PM designator.

## Hour12As0 Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputDateExtender Class : Hour12As0 Property

Gets or sets the range of hours that can be entered in the control.

## Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("Gets or sets whether the 12-hours mode ranges from
00:00:00 to 11:59:59 or from 01:00:00 to 12:59:59.")>
<C1CategoryAttribute("Behavior")>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
Public Property Hour12As0 As System.Boolean
```

C#

```
[C1Description("Gets or sets whether the 12-hours mode ranges from 00:00:00
to 11:59:59 or from 01:00:00 to 12:59:59.")
[C1Category("Behavior")]
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
public System.bool Hour12As0 {get; set;}
```

## Property Value

One of the **bool** enumeration values. The default is **false**

## Remarks

This property determines the range of hours that can be entered or displayed when the format expression specified by the **Format** or the DisplayFormat properties describe 12-hour format -- the "tt" and the "HH" keywords included.

If set this property to **false**, the control sets the range for the hour field from 1 - 12. If set to **true** the range is set to 0 - 11.

## SmartInputMode Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputDateExtender Class : SmartInputMode Property

Allows smart input behavior.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
```

```
<C1DescriptionAttribute("Allows smart input behavior.")>
Public Property SmartInputMode As System.Boolean
```

C#

```
[C1Category("Behavior")]
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[C1Description("Allows smart input behavior.")]
public System.bool SmartInputMode {get; set;}
```

## Remarks

When SmartInputMode is true, input control will automatically insert the closest century value when user types a number in year section.

Properties Methods Events

C1.Web.Wijmo.Extenders.C1Input Namespace : C1InputExtenderBase Class

The following tables list the members exposed by C1InputExtenderBase.

### Public Properties

	Name	Description
	AllowSpinLoop	Determines whether allow the spin behavior loop.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	BlurOnLastChar	Gets or sets whether or not the next control in the tab order receives the focus as soon as the control is filled at the last character.
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control.
	DropDownButtonAlign	Determines the alignment of the dropdown button.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed.
	ID	(Inherited from System.Web.UI.Control)
	ImeMode	Gets or sets the IME mode.
	InvalidClass	The CSS class applied to the widget when an invalid value is entered.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button.
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button.

	OnClientDropDownClose	Occurs when the dropdown editor closed.
	OnClientDropDownOpen	Occurs when the dropdown editor opened.
	OnClientInitialized	Occurs after the widget is initialized.
	OnClientInitializing	Occurs before the widget is initialized.
	OnClientInvalidInput	Occurs when an invalid character is entered.
	OnClientKeyExit	Occurs when the key exit event fired.
	OnClientSpinDown	Occurs when the spindown button clicked.
	OnClientSpinUp	Occurs when the spinup button clicked.
	OnClientTextChanged	Occurs when the text of the input is changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Placeholder	Determines the text that will be displayed for blank status.
	ReadOnly	Determines whether the user can type a value.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowDropDownButton	Determines whether the dropdown button is displayed.
	ShowSpinner	Determines whether the spinner button is displayed.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)

	SpinnerAlign	Determines the spin button alignment.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath.

		(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)

	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)

	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)

	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)

	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## Culture Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputExtenderBase Class : Culture Property

Gets or sets the culture information for the input control.

## Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("Gets or sets the culture information for the input control.")>
<WidgetOptionAttribute()>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.TypeConverterAttribute("System.ComponentModel.CultureInfoConverter, System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
```

Public Property Culture As System.Globalization.CultureInfo
-------------------------------------------------------------

C#	
----	--

```
[C1Description("Gets or sets the culture information for the input control.")]
[WidgetOption()]
[C1Category("Behavior")]
[System.ComponentModel.TypeConverter("System.ComponentModel.CultureInfoConverter, System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")]
[System.ComponentModel.NotifyParentProperty(true)]
public System.Globalization.CultureInfo Culture {get; set;}
```

Properties Methods Events

C1.Web.Wijmo.Extenders.C1Input Namespace : C1InputMaskExtender Class

The following tables list the members exposed by C1InputMaskExtender.

### Public Constructors

	Name	Description
	C1InputMaskExtender Constructor	Initializes a new instance of the C1InputMaskExtender class.

Top

### Public Properties

	Name	Description
	AllowPromptAsInput	Indicates whether the prompt character can be entered as valid data by the user. The prompt

		character is the character seen in the text box before a user enters input. See the PromptChar Property for more information.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoConvert	Gets or sets whether the control automatically converts to the proper format according to the format setting.
	BlurOnLastChar	Gets or sets whether or not the next control in the tab order receives the focus as soon as the control is filled at the last character. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)

	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FormatMode	Determines the form mode for the MaskFormat property.
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HidePromptOnLeave	Indicates whether the prompt characters in the input mask are hidden when the input loses focus.
	HighlightText	Gets or sets how to select the text when the control receives the focus.
	ID	(Inherited from System.Web.UI.Control)
	ImeMode	Gets or sets the IME mode. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	MaskFormat	Determines the input mask to use at run time.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitializing	Occurs before the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	PasswordChar	Determines the character to be substituted for the actual input characters.
	Pickers	Get an object contains the settings for the dropdown list.
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	PromptChar	Determines the character used to represent the absence of user input.
	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResetOnPrompt	Determines how an input character that matches the prompt character should be handled.
	ResetOnSpace	Determines how a space input character should be handled.
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SkipLiterals	Indicates whether the user is allowed to re-enter literal values.
	TabAction	Gets or sets the tab action.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)

	Text	Determines the default text to display in an input control.
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

		e)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Public Methods

	Name	Description
≡	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
≡	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
≡	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
≡	Focus	(Inherited from System.Web.UI.Control)
≡	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
≡	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
≡	HasControls	(Inherited from System.Web.UI.Control)
≡	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
≡	ResolveClientUrl	(Inherited from System.Web.UI.Control)
≡	ResolveUrl	(Inherited from System.Web.UI.Control)
≡	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputMaskExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

C1InputMaskExtender Members

## Render Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputMaskExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Properties

C1.Web.Wijmo.Extenders.C1Input Namespace : C1InputMaskExtender Class

For a list of all members of this type, see C1InputMaskExtender members.

## Public Properties

	Name	Description
	AllowPromptAsInput	Indicates whether the prompt character can be entered as valid data by the user. The prompt

		character is the character seen in the text box before a user enters input. See the PromptChar Property for more information.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoConvert	Gets or sets whether the control automatically converts to the proper format according to the format setting.
	BlurOnLastChar	Gets or sets whether or not the next control in the tab order receives the focus as soon as the control is filled at the last character. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)

	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FormatMode	Determines the form mode for the MaskFormat property.
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HidePromptOnLeave	Indicates whether the prompt characters in the input mask are hidden when the input loses focus.
	HighlightText	Gets or sets how to select the text when the control receives the focus.
	ID	(Inherited from System.Web.UI.Control)
	ImeMode	Gets or sets the IME mode. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	MaskFormat	Determines the input mask to use at run time.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitializing	Occurs before the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	PasswordChar	Determines the character to be substituted for the actual input characters.
	Pickers	Get an object contains the settings for the dropdown list.
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	PromptChar	Determines the character used to represent the absence of user input.
	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResetOnPrompt	Determines how an input character that matches the prompt character should be handled.
	ResetOnSpace	Determines how a space input character should be handled.
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SkipLiterals	Indicates whether the user is allowed to re-enter literal values.
	TabAction	Gets or sets the tab action.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)

	Text	Determines the default text to display in an input control.
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

		e)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## ResetOnPrompt Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputMaskExtender Class : ResetOnPrompt Property

Determines how an input character that matches the prompt character should be handled.

### Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("Determines how an input character that matches the
```

```
prompt character should be handled.")>
Public Property ResetOnPrompt As System.Boolean
```

C#

```
[WidgetOption()]
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
[C1Description("Determines how an input character that matches the prompt
character should be handled.")]
public System.bool ResetOnPrompt {get; set;}
```

## SkipLiterals Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputMaskExtender Class : SkipLiterals Property

Indicates whether the user is allowed to re-enter literal values.

### Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Behavior")>
<WidgetOptionAttribute()>
<C1DescriptionAttribute("Indicates whether the user is allowed to re-enter
literal values.")>
Public Property SkipLiterals As System.Boolean
```

C#

## TabAction Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputMaskExtender Class : TabAction Property

Gets or sets the tab action.

### Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("Gets or sets whether typing TAB moves focus between
```

```
controls or between fields within the control.")>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetOptionAttribute()>
Public Overridable Property TabAction As TabAction
```

C#

```
[C1Description("Gets or sets whether typing TAB moves focus between controls
or between fields within the control.")]
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
[WidgetOption()]

## Text Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputMaskExtender Class : Text Property

Determines the default text to display in an input control.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Data")>
<C1DescriptionAttribute("Determines the default text to display for an
input.")>
<WidgetOptionAttribute()>
Public Property Text As System.String
```

C#

```
[System.ComponentModel.DefaultValue()]
[C1Category("Data")]
[C1Description("Determines the default text to display for an input.")]
[WidgetOption()]
public System.string Text {get; set;}
```

C1.Web.Wijmo.Extenders.C1Input Namespace : C1InputNumberExtender Class

The following tables list the members exposed by C1InputNumberExtender.

## Public Constructors

	Name	Description
	C1InputNumberExtender Constructor	Initializes a new instance of the C1InputNumberExtender class.

Top

## Public Properties

	Name	Description
	AllowSpinLoop	Determines whether allow the spin behavior loop. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

	CurrencySymbol	Determines the currency symbol string.
	DbValue	Gets or sets the Value property value in a data binding-friendly way.
	DecimalPlaces	Indicates the number of decimal places to display.
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HighlightText	Gets or sets whether the text is highlighted in the number control.
	ID	(Inherited from System.Web.UI.Control)
	Increment	Determines how much to increase/decrease the input field.
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	MaxValue	Determines the maximum value that can be entered for the number input.
	MinValue	Determines the minimal value that can be entered for the number input.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NegativeClass	Determine the class string that when the input value is negative.
	NegativePrefix	Determine the prefix string used for negative value.
	NegativeSuffix	Determine the suffix string used for negative value.
	NumberType	Determines the type of the number input.
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitializing	Occurs before the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientSpinDown	Occurs when the spindown button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientSpinUp	Occurs when the spinup button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientValueBoundsExceeded	Occurs when the value of the input exceeds the valid range.

	OnClientValueChanged	Occurs after the value changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pickers	
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	PositivePrefix	Determine the prefix string used for positive value.
	PositiveSuffix	Determine the suffix string used for positive value.
	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	ShowGroup	Indicates whether the thousands group separator will be inserted between each digital group. The number of digits in the thousands group depends on the selected Culture."
	ShowSpinner	Determines whether the spinner button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SpinnerAlign	Determines the spin button alignment. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	Determines the default numeric value.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputNumberExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

C1InputNumberExtender Members

## Render Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputNumberExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub Render( _ ByVal writer As System.Web.UI.HtmlTextWriter _ )	
C#	

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

## Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

	Name	Description
	AllowSpinLoop	Determines whether allow the spin behavior loop. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

		e)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	CurrencySymbol	Determines the currency symbol string.
	DbValue	Gets or sets the Value property value in a data binding-friendly way.
	DecimalPlaces	Indicates the number of decimal places to display.
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)

	EnableViewState	(Inherited from System.Web.UI.Control)
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HighlightText	Gets or sets whether the text is highlighted in the number control.
	ID	(Inherited from System.Web.UI.Control)
	Increment	Determines how much to increase/decrease the input field.
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	MaxValue	Determines the maximum value that can be entered for the number input.
	MinValue	Determines the minimal value that can be entered for the number input.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NegativeClass	Determine the class string that when the input value is negative.
	NegativePrefix	Determine the prefix string used for negative value.
	NegativeSuffix	Determine the suffix string used for negative value.
	NumberType	Determines the type of the number input.
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown

wn	button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
 OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
 OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
 OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
 OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
 OnClientInitializing	Occurs before the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
 OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
 OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

	OnClientSpinDown	Occurs when the spindown button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientSpinUp	Occurs when the spinup button clicked. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientValueBoundsExceeded	Occurs when the value of the input exceeds the valid range.
	OnClientValueChanged	Occurs after the value changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Pickers	
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	PositivePrefix	Determine the prefix string used for positive value.
	PositiveSuffix	Determine the suffix string used for positive value.
	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	ShowGroup	Indicates whether the thousands group separator will be inserted between each digital group. The number of digits in the thousands group depends on the selected Culture."
	ShowSpinner	Determines whether the spinner button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SpinnerAlign	Determines the spin button alignment. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	<p>Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	Determines the default numeric value.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p>

		(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)

	AutoConvert	Gets or sets whether the control automatically converts to the proper format according to the format setting.
	BlurOnLastChar	Gets or sets whether or not the next control in the tab order receives the focus as soon as the control is filled at the last character. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	CountWrappedLine	Gets or sets whether to treat the wrapped lines as one line or multiple lines when counting the lines count.
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	Ellipsis	Gets or sets how to display the ellipsis string when the the control's content is longer than its width.
	EllipsisString	Gets or sets the ellipsis string shows in the control.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Format	Gets or sets the format string that defines the type of text allowed for input in the control.
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HighlightText	Gets or sets whether the text is highlighted in the text control.
	ID	(Inherited from System.Web.UI.Control)
	ImeMode	Gets or sets the IME mode. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	LengthAsByte	Gets or sets whether the maximum length constraint for input is byte-based or character-based.
	MaxLength	Gets or sets the maximum length of text that can be input in the control.
	MaxLineCount	Gets or sets the max count of lines can be input into the Edit control. .
	MultiLine	Determines the default text to display in an input control.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	OnClientInitializing	Occurs before the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientReadingImeStringOutput	Occurs when the reading ime string generated.
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	PasswordChar	Gets or sets the password char.
	Pickers	Get an object that contains the setting for the dropdown list.
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	ShowOverflowTip	Gets or sets whether display the overflow tip.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Text	Determines the default text to display in an input control.
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the

		<p>whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>
	UniqueID	<p>(Inherited from System.Web.UI.Control)</p>
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>
	ValidateRequestMode	<p>(Inherited from System.Web.UI.Control)</p>
	ViewStateMode	<p>(Inherited from System.Web.UI.Control)</p>
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>
	WijmoCssAdapter	<p>Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)</p>

## Reference

C1InputTextExtender Class

C1.Web.Wijmo.Extenders.C1Input Namespace

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputTextExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

## Render Method

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputTextExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Properties

C1.Web.Wijmo.Extenders.C1Input Namespace : C1InputTextExtender Class

For a list of all members of this type, see C1InputTextExtender members.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoConvert	Gets or sets whether the control automatically converts to the proper format according to the format setting.
	BlurOnLastChar	Gets or sets whether or not the next control in the tab order receives the focus as soon as the control is

		filled at the last character. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	BlurOnLeftRightKey	Gets or set whether the focus automatically moves to the next or previous tab ordering control when pressing the left, right arrow keys. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	CountWrappedLine	Gets or sets whether to treat the wrapped lines as one line or multiple lines when counting the lines count.
	DropDownButtonAlign	Determines the alignment of the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Ellipsis	Gets or sets how to display the ellipsis string when the the control's content is longer than its width.

	EllipsisString	Gets or sets the ellipsis string shows in the control.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Format	Gets or sets the format string that defines the type of text allowed for input in the control.
	HideEnter	If true, then the browser response is disabled when the ENTER key is pressed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	HighlightText	Gets or sets whether the text is highlighted in the text control.
	ID	(Inherited from System.Web.UI.Control)
	ImeMode	Gets or sets the IME mode. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	InvalidClass	The CSS class applied to the widget when an invalid value is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	LengthAsByte	Gets or sets whether the maximum length constraint for input is byte-based or character-based.

	MaxLength	Gets or sets the maximum length of text that can be input in the control.
	MaxLineCount	Gets or sets the max count of lines can be input into the Edit control. .
	MultiLine	Determines the default text to display in an input control.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDropDownButtonMouseDown	Occurs when the mouse is pressed on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownButtonMouseUp	Occurs when the mouse is released on the dropdown button. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownClose	Occurs when the dropdown editor closed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientDropDownOpen	Occurs when the dropdown editor opened. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitialized	Occurs after the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientInitializing	Occurs before the widget is initialized. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

		se)
	OnClientInvalidInput	Occurs when an invalid character is entered. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientKeyExit	Occurs when the key exit event fired. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	OnClientReadingImeStringOutput	Occurs when the reading ime string generated.
	OnClientTextChanged	Occurs when the text of the input is changed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	PasswordChar	Gets or sets the password char.
	Pickers	Get an object that contains the setting for the dropdown list.
	Placeholder	Determines the text that will be displayed for blank status. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	ReadOnly	Determines whether the user can type a value. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)

	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowDropDownButton	Determines whether the dropdown button is displayed. (Inherited from C1.Web.Wijmo.Extenders.C1Input.C1InputExtenderBase)
	ShowOverflowTip	Gets or sets whether display the overflow tip.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Text	Determines the default text to display in an input control.
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

		e)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## EllipsisString Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputTextExtender Class : EllipsisString Property

Gets or sets the ellipsis string shows in the control.

### Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("C1Input.EllipsisString")>
<C1CategoryAttribute("Behavior")>
Public Property EllipsisString As System.String
```

C#

```
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[C1Description("C1Input.EllipsisString")]
[C1Category("Behavior")]
public System.string EllipsisString {get; set;}
```

## Format Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputTextExtender Class : Format Property

Gets or sets the format string that defines the type of text allowed for input in the control.

### Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("Gets or sets the input mask of the control.")>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Behavior")>
Public Property Format As System.String
```

C#

```
[C1Description("Gets or sets the input mask of the control.")]
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[C1Category("Behavior")]
public System.string Format {get; set;}
```

## Remarks

The following key words are supported. DBCS Keywords: **A** Upper case DBCS alphabet (A-Z). **a** Lower case DBCS alphabet (a-z). **K** DBCS Katakana. **9** DBCS Numbers (0-9). **#** DBCS numbers and number related symbols (0-9, +-\$\.,). **@ DBCS symbols.** **J Hiragana.** **Z All DBCS characters without Space.** **SBCS Keywords** \.,). @ Symbols. **H** All SBCS characters without Space. **^** Any character not included in the specified format. **\** Escape character. For example, format = 'A', then the wijinputtext can only input the upper case DBCS alphabet. If you input the SBCS 'k', then it will be automatic conver to DBCS 'K' if the autoConvert is true, But if the autoConvert is false, you can't input 'k'.

## LengthAsByte Property

C1.Web.Wijmo.Extenders.C1Input Namespace > C1InputTextExtender Class : LengthAsByte Property

Gets or sets whether the maximum length constraint for input is byte-based or character-based.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Behavior")>
<WidgetOptionAttribute()>
<C1DescriptionAttribute("Gets or sets whether the maximum number of
characters allowed in the control is handled based on bytes or characters.")>
Public Property LengthAsByte As System.Boolean
```

C#

```
[System.ComponentModel.DefaultValue()]
[C1Category("Behavior")]

C1.Web.Wijmo.Extenders.C1Input Namespace

## HighlightText

C1.Web.Wijmo.Extenders.C1Input Namespace : HighlightText Enumeration

Specifies the type of selection text in control

## Syntax

Visual Basic (Declaration)	
<pre>Public Enum HighlightText     Inherits System.Enum</pre>	
C#	
<pre>public enum HighlightText : System.Enum</pre>	

## Members

Member	Description
<b>All</b>	Select all the text
<b>Field</b>	Select the specified field
<b>None</b>	No selection specified

## Remarks

After getting focus, none, specified fields or all text in editor are selected.

## Inheritance Hierarchy

```
System.Object
 System.ValueType
 System.Enum
 C1.Web.Wijmo.Extenders.C1Input.HighlightText
```

## See Also

### Reference

C1.Web.Wijmo.Extenders.C1Input Namespace

## ImeMode

Specifies whether IME mode should be supported.

## Syntax

Visual Basic (Declaration)	
<pre>Public Enum ImeMode     Inherits System.Enum</pre>	
C#	
<pre>public enum ImeMode : System.Enum</pre>	

## Members

Member	Description
<b>Active</b>	Support IME mode
<b>Auto</b>	Support IME mode
<b>Disabled</b>	Disable IME mode
<b>InActive</b>	Support IME mode

## Inheritance Hierarchy

```
System.Object
 System.ValueType
```

System.Enum

**C1.Web.Wijmo.Extenders.C1Input.ImeMode**

## See Also

### Reference

C1.Web.Wijmo.Extenders.C1Input Namespace

## NumberType

C1.Web.Wijmo.Extenders.C1Input Namespace : NumberType Enumeration

Enumeration that determines the type of the number input.

## Syntax

Visual Basic (Declaration)	
<pre>Public Enum NumberType     Inherits System.Enum</pre>	
C#	
<pre>public enum NumberType : System.Enum</pre>	

## Members

Member	Description
<b>Currency</b>	A currency type number input.
<b>Numeric</b>	A numeric type number input.
<b>Percent</b>	A percent type number input.

## Inheritance Hierarchy

System.Object

System.ValueType

System.Enum

**C1.Web.Wijmo.Extenders.C1Input.NumberType**

## See Also

### Reference

C1.Web.Wijmo.Extenders.C1Input Namespace

## SpinnerAlign

C1.Web.Wijmo.Extenders.C1Input Namespace : SpinnerAlign Enumeration

Enumeration that determines the alignment of spinner buttons of input.

### Syntax

Visual Basic (Declaration)	
<pre>Public Enum SpinnerAlign     Inherits System.Enum</pre>	
C#	
<pre>public enum SpinnerAlign : System.Enum</pre>	

### Members

Member	Description
<b>HorizontalDownLeft</b>	Display the spin button as two buttons, and the down button is on the left, the up button is on the right.
<b>HorizontalUpLeft</b>	Display the spin button as two buttons, and the up button is on the left, the down button is on the right.
<b>VerticalLeft</b>	Dispaly the spin button as one button, and the up button is on the top, and the down button is on the bottom, the position is in control's left.
<b>VerticalRight</b>	Dispaly the spin button as one button, and the up button is on the top, and the down button is on the bottom, the position is in control's right.

### Inheritance Hierarchy

System.Object  
   System.ValueType  
     System.Enum  
       **C1.Web.Wijmo.Extenders.C1Input.SpinnerAlign**

### See Also

# TabAction

Specifies how the tab key works

## Syntax

Visual Basic (Declaration)	
Public Enum TabAction Inherits System.Enum	
C#	
public enum TabAction : System.Enum	

## Members

Member	Description
<b>Control</b>	Used to move focus between controls
<b>Field</b>	Used to move cursor position between fields in control

## Remarks

Tab key is to move focus among controls or fields.

## Inheritance Hierarchy

System.Object  
    System.ValueType  
        System.Enum  
            **C1.Web.Wijmo.Extenders.C1Input.TabAction**

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoPlay	Determines whether pages are automatically displayed in order.
	AutoPlayMovies	Determines whether to turn on the autoplay option in movie player.
	AutoSize	A value determines whether to auto-size to keep the original width/height ratio of content.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClickPause	Determines whether to pause the auto-play when clicking the content.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CloseOnEscape	Determines whether to close the popup window when user presses the ESC key.

	CloseOnOuterClick	Determines whether to close the popup window when user clicks on the out side of content.
	Controls	(Inherited from System.Web.UI.Control)
	ControlsPosition	Determines the position of control buttons.
	CounterFormat	Determines the text format of counter.
	CounterLimit	Determines the maximum number of digit buttons in sequence counter type.
	CounterType	Determines the type counter style.
	CtrlButtons	Determines the visibility of the control buttons.
	Delay	Determines the time span in milliseconds between pages in autoplay mode.
	DialogButtons	Determines the visibility of the dialog buttons.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FlashInstall	Gets or sets the relative path and name of the flash installation guide.
	FlvPlayer	Gets or sets the relative path and name of the flash video player.
	ID	(Inherited from System.Web.UI.Control)

	KeyNav	Determines whether to allow keyboard navigation.
	Loop	Determines whether start from the first page when reaching the end in autoplay mode.
	MaxHeight	A value that indicates the maximum height of the content.
	MaxWidth	A value that indicates the maximum width of the content.
	Modal	Determines whether the popped up content is displayed in modal style container.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeClose	Occurs before the popped up container is closed.
	OnClientBeforeShow	Occurs before a page's content is shown.
	OnClientClose	Occurs after the popped up container is closed.
	OnClientOpen	Occurs after the popped up container is opened.
	OnClientShow	Occurs after a page's content is shown.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Player	Determines the name of player to host the content.
	Position	Determines the popup position of content window.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResizeAnimation	Determines the animation style when resizing.

	RootUrl	Determines the root url for each item.
	ShowControlsOnHover	Determines whether to display the control buttons only when hovering the mouse to the content.
	ShowCounter	Determines whether to display the counter.
	ShowMovieControls	Determines whether to turn on the movie controls in movie player.
	ShowNavButtons	Determines whether to display the navigation buttons.
	ShowTimer	Determines whether to display the time bar.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SlideDirection	Determines the slide direction.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextHideOption	Determines the animation style when hiding the text.

	TextPosition	Determines the position of text description.
	TextShowOption	Determines the animation style when showing out the text.
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TransAnimation	Determines the animation style when switching between pages.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)

	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetProperty<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)

	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description

	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)

	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1LightBox Namespace > C1LightBoxExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

## Render Method

C1.Web.Wijmo.Extenders.C1LightBox Namespace > C1LightBoxExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub Render( _ ByVal <i>writer</i> As System.Web.UI.HtmlTextWriter _ )	
C#	
protected override void Render( System.Web.UI.HtmlTextWriter <i>writer</i> )	

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoPlay	Determines whether pages are automatically displayed in order.
	AutoPlayMovies	Determines whether to turn on the autoplay option in movie player.
	AutoSize	A value determines whether to auto-size to keep the original width/height ratio of content.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClickPause	Determines whether to pause the auto-play when clicking the content.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CloseOnEscape	Determines whether to close the popup window when user presses the ESC key.
	CloseOnOuterClick	Determines whether to close the popup window when user clicks on the out side of content.

	Controls	(Inherited from System.Web.UI.Control)
	ControlsPosition	Determines the position of control buttons.
	CounterFormat	Determines the text format of counter.
	CounterLimit	Determines the maximum number of digit buttons in sequence counter type.
	CounterType	Determines the type counter style.
	CtrlButtons	Determines the visibility of the control buttons.
	Delay	Determines the time span in milliseconds between pages in autoplay mode.
	DialogButtons	Determines the visibility of the dialog buttons.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FlashInstall	Gets or sets the relative path and name of the flash installation guide.
	FlvPlayer	Gets or sets the relative path and name of the flash video player.
	ID	(Inherited from System.Web.UI.Control)
	KeyNav	Determines whether to allow keyboard navigation.

	Loop	Determines whether start from the first page when reaching the end in autoplay mode.
	MaxHeight	A value that indicates the maximum height of the content.
	MaxWidth	A value that indicates the maximum width of the content.
	Modal	Determines whether the popped up content is displayed in modal style container.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeClose	Occurs before the popped up container is closed.
	OnClientBeforeShow	Occurs before a page's content is shown.
	OnClientClose	Occurs after the popped up container is closed.
	OnClientOpen	Occurs after the popped up container is opened.
	OnClientShow	Occurs after a page's content is shown.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Player	Determines the name of player to host the content.
	Position	Determines the popup position of content window.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResizeAnimation	Determines the animation style when resizing.
	RootUrl	Determines the root url for each item.

	ShowControlsOnHover	Determines whether to display the control buttons only when hovering the mouse to the content.
	ShowCounter	Determines whether to display the counter.
	ShowMovieControls	Determines whether to turn on the movie controls in movie player.
	ShowNavButtons	Determines whether to display the navigation buttons.
	ShowTimer	Determines whether to display the time bar.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SlideDirection	Determines the slide direction.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextHideOption	Determines the animation style when hiding the text.
	TextPosition	Determines the position of text description.

	TextShowOption	Determines the animation style when showing out the text.
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TransAnimation	Determines the animation style when switching between pages.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value

		can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

The following tables list the members exposed by C1ListExtender.

## Public Constructors

	Name	Description
	C1ListExtender Constructor	Initializes a new instance of the C1ExpanderExtender class.

Top

## Public Properties

	Name	Description
	AddHoverItemClass	A value determines whether to add ui-state-hover class to list item when mouse enters.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoSize	A value determines whether to auto-size wijlist.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	KeepHighlightOnMouseLeave	A value determines whether to keep item highlight

		when mouse is leaving list.
	ListItems	An array that specifies the listItem collections of wijlist.
	MaxItemsCount	A value specifies the max items count to display if autoSize is set to true.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBlur	A function called when an item loses focus.
	OnClientFocus	A function called after an item is focused.
	OnClientFocusing	A function called before an item is focused.
	OnClientItemrendered	A function called after a item is rendered.
	OnClientItemrendering	A function called before an item is rendered.
	OnClientListrendered	A function called after list is rendered.
	OnClientSelected	Select event handler of wijlist. A function will be called when any item in the list is selected.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SelectedIndex	A value that specifies the index of the item to select.
	SelectionMode	A value indicates the selection mode of wijlist.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)

	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

		)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)

	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1List Namespace > C1ListExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(</pre>	

```
System.EventArgs e
)
```

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

C1.Web.Wijmo.Extenders.C1ListView Namespace : C1ListViewExtender Class

The following tables list the members exposed by C1ListViewExtender.

## Public Constructors

	Name	Description
	C1ListViewExtender Constructor	Initializes a new instance of the C1ExpanderExtender class.

Top

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoDividers	A listview can be configured to automatically generate dividers for its items.

	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	CountTheme	Sets the color scheme (swatch) for list item count bubbles.
	DividerTheme	Sets the color scheme (swatch) for list dividers.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Filter	Adds a search filter bar to listviews.
	FilterPlaceholder	The placeholder text used in search filter bars.
	FilterReveal	Determines whether to auto-hide all the list items when the search field is blank.

	FilterTheme	Sets the color scheme (swatch) for the search filter bar.
	HeaderTheme	Sets the color scheme (swatch) for headers of nested list sub pages.
	Icon	Applies an icon from the icon set to all linked list buttons.
	ID	(Inherited from System.Web.UI.Control)
	Inset	A value determines whether to auto-size wijlist.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientAutodividersSelector	The function to return a value which can specify divider text.
	OnClientCreate	A function which will be triggered when a wijlistview is created.
	OnClientFilterCallback	The function accepts two arguments -- the text of the list item (or data-filtertext value if present), and the search string. Return true to hide the item, false to leave it visible.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SplitIcon	Applies an icon from the icon set to all split list buttons.

	SplitTheme	Sets the color scheme (swatch) for split list buttons.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	Overridden. Set the default color scheme (swatch) for items.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)

	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)

	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)

	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

 CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClearCachedClientID	(Inherited from System.Web.UI.Control)
 ClearChildControlState	(Inherited from System.Web.UI.Control)
 ClearChildState	(Inherited from System.Web.UI.Control)
 ClearChildViewState	(Inherited from System.Web.UI.Control)
 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)

	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.

	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1ListView Namespace > C1ListViewExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(</pre>	

```
System.EventArgs e
)
```

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## Properties

C1.Web.Wijmo.Extenders.C1ListView Namespace : C1ListViewExtender Class

For a list of all members of this type, see C1ListViewExtender members.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoDividers	A listview can be configured to automatically generate dividers for its items.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)

	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	CountTheme	Sets the color scheme (swatch) for list item count bubbles.
	DividerTheme	Sets the color scheme (swatch) for list dividers.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Filter	Adds a search filter bar to listviews.
	FilterPlaceholder	The placeholder text used in search filter bars.
	FilterReveal	Determines whether to auto-hide all the list items when the search field is blank.
	FilterTheme	Sets the color scheme (swatch) for the search filter bar.
	HeaderTheme	Sets the color scheme (swatch) for headers of nested list sub pages.
	Icon	Applies an icon from the icon set to all linked list buttons.
	ID	(Inherited from System.Web.UI.Control)
	Inset	A value determines whether to auto-size wijlist.

	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientAutodividersSelector	The function to return a value which can specify divider text.
	OnClientCreate	A function which will be triggered when a wijlistview is created.
	OnClientFilterCallback	The function accepts two arguments -- the text of the list item (or data-filtertext value if present), and the search string. Return true to hide the item, false to leave it visible.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SplitIcon	Applies an icon from the icon set to all split list buttons.
	SplitTheme	Sets the color scheme (swatch) for split list buttons.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	<p>Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	Overridden. Set the default color scheme (swatch) for items.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## AutoDividers Property

C1.Web.Wijmo.Extenders.C1ListView Namespace > C1ListViewExtender Class : AutoDividers Property

A listview can be configured to automatically generate dividers for its items.

### Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Appearance")>
<WidgetOptionNameAttribute("autodividers")>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("A listview can be configured to automatically
generate dividers for its items.")>
<WidgetOptionAttribute()>
Public Property AutoDividers As System.Boolean
```

C#

```
[C1Category("Appearance")]
[WidgetOptionName("autodividers")]
[System.ComponentModel.DefaultValue()]
[C1Description("A listview can be configured to automatically generate
dividers for its items.")]
[WidgetOption()]
public System.bool AutoDividers {get; set;}
```

## Public Properties

	Name	Description
	Animation	Defines the animation to show or hide the submenu in flyout mode. If showAnimation or hideAnimation is not specified use this property.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	BackLink	Determines whether the iPod menu shows a back link or a breadcrumb header in the menu.
	BackLinkText	Gets and sets the text of the back link.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	Checkable	Gets or sets the item can be checked
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	CrumbDefaultText	Gets and sets the top breadcrumb's default text.
	Direction	A value that indicates menu's direction.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In

		order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureSubmenuOnBody	A value indicating the submenu will be append to the body or menu container. If the value is true, the submenu will be appended to body element, else it will append to the menu container. Default: false. Type: Boolean.
	HideAnimation	Defines the animation to hide submenu in flyout mode.
	HideDelay	Gets or sets delay time to hide submenu.
	ID	(Inherited from System.Web.UI.Control)
	MaxHeight	Determines the iPod-style menu's maximum height.
	Mode	Defines the behavior of the submenu whether it is a popup menu or an iPod-style navigation list.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBlur	Triggered when a menu item loses focus.
	OnClientFocus	Triggered when a menu item gets the focus, either when the mouse is used to hover over it (on hover) or when the cursor keys are used on the keyboard (navigation with cursor key) focus.
	OnClientHidden	Triggered once a menu or submenu has hidden.

	OnClientHidding	Triggered before hiding a menu or submenu.
	OnClientSelect	Triggered when a menu item is selected.
	OnClientShowing	Triggered before showing a menu or submenu.
	OnClientShown	Triggered once a menu or submenu has shown.
	Orientation	Controls the root menu's orientation. All submenus are vertical regardless of the orientation of the root menu.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Position	Specifies the location and orientation of the menu relative to the button or link used to open it. Configuration for the Position Utility Of option is excluded; it is always configured by the widget. Collision also controls collision detection automatically.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowAnimation	Defines the show animation to show submenu in flyout mode.
	ShowDelay	Gets or sets delay time to show submenu.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SlidingAnimation	Defines the sliding animation in slide mode.
	SubmenuTriggerEvent	Specifies the event used to show the submenu.

	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TopLinkText	Gets and sets the text of the top link.
	Trigger	Specifies the event used to show the menu.
	TriggerEvent	Set the event used to show the menu and submenu( If "SubmenuTriggerEvent" is "Default").

	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

### Properties

For a list of all members of this type, see C1MenuExtender members.

### Public Properties

	Name	Description
	Animation	Defines the animation to show or hide the submenu in flyout mode. If showAnimation or hideAnimation is not specified use this property.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	BackLink	Determines whether the iPod menu shows a back link or a breadcrumb header in the menu.
	BackLinkText	Gets and sets the text of the back link.

	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	Checkable	Gets or sets the item can be checked
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	CrumbDefaultText	Gets and sets the top breadcrumb's default text.
	Direction	A value that indicates menu's direction.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureSubmenuOnBody	A value indicating the submenu will be append to the body or menu container. If the value is true, the submenu will be appended to body element, else it will append to the menu container. Default: false. Type: Boolean.

	HideAnimation	Defines the animation to hide submenu in flyout mode.
	HideDelay	Gets or sets delay time to hide submenu.
	ID	(Inherited from System.Web.UI.Control)
	MaxHeight	Determines the iPod-style menu's maximum height.
	Mode	Defines the behavior of the submenu whether it is a popup menu or an iPod-style navigation list.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBlur	Triggered when a menu item loses focus.
	OnClientFocus	Triggered when a menu item gets the focus, either when the mouse is used to hover over it (on hover) or when the cursor keys are used on the keyboard (navigation with cursor key) focus.
	OnClientHidden	Triggered once a menu or submenu has hidden.
	OnClientHidding	Triggered before hiding a menu or submenu.
	OnClientSelect	Triggered when a menu item is selected.
	OnClientShowing	Triggered before showing a menu or submenu.
	OnClientShown	Triggered once a menu or submenu has shown.
	Orientation	Controls the root menu's orientation. All submenus are vertical regardless of the orientation of the root menu.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)

	Position	Specifies the location and orientation of the menu relative to the button or link used to open it. Configuration for the Position Utility Of option is excluded; it is always configured by the widget. Collision also controls collision detection automatically.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowAnimation	Defines the show animation to show submenu in flyout mode.
	ShowDelay	Gets or sets delay time to show submenu.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SlidingAnimation	Defines the sliding animation in slide mode.
	SubmenuTriggerEvent	Specifies the event used to show the submenu.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-

		<p>lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	TopLinkText	<p>Gets and sets the text of the top link.</p>
	Trigger	<p>Specifies the event used to show the menu.</p>
	TriggerEvent	<p>Set the event used to show the menu and submenu( If "SubmenuTriggerEvent" is "Default").</p>
	UniqueID	<p>(Inherited from System.Web.UI.Control)</p>
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	<p>(Inherited from System.Web.UI.Control)</p>
	ViewStateMode	<p>(Inherited from System.Web.UI.Control)</p>
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from</p>

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## OnClientHidding Property

C1.Web.Wijmo.Extenders.C1Menu Namespace > C1MenuExtender Class : OnClientHidding Property

Triggered before hidding a menu or submenu.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Client-Side Events")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetOptionNameAttribute("hidding")>
<C1DescriptionAttribute("Triggered before hidding a menu or submenu.")>
<WidgetEventAttribute("e, item")>
Public Property OnClientHidding As System.String
```

C#

```
[C1Category("Client-Side Events")]
[System.ComponentModel.DefaultValue()]
[WidgetOptionName("hidding")]
[C1Description("Triggered before hidding a menu or submenu.")]
[WidgetEvent("e, item")]
public System.string OnClientHidding {get; set;}
```

## OnClientSelect Property

C1.Web.Wijmo.Extenders.C1Menu Namespace > C1MenuExtender Class : OnClientSelect Property

Triggered when a menu item is selected.

### Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Client-Side Events")>
<C1DescriptionAttribute("Triggered when a menu item is selected")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetOptionNameAttribute("select")>
<WidgetEventAttribute("e")>
Public Property OnClientSelect As System.String
```

C#

```
[C1Category("Client-Side Events")]
[C1Description("Triggered when a menu item is selected")]
[System.ComponentModel.DefaultValue()]
[WidgetOptionName("select")]
[WidgetEvent("e")]
public System.string OnClientSelect {get; set;}
```

## OnClientShowing Property

C1.Web.Wijmo.Extenders.C1Menu Namespace > C1MenuExtender Class : OnClientShowing Property

Triggered before showing a menu or submenu.

### Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Client-Side Events")>
<WidgetEventAttribute("e, item")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetOptionNameAttribute("showing")>
```

```
<C1DescriptionAttribute("Triggered before showing a menu or submenu.")>
Public Property OnClientShowing As System.String
```

C#

```
[C1Category("Client-Side Events")]
[WidgetEvent("e, item")]
[System.ComponentModel.DefaultValue()]
[WidgetOptionName("showing")]
[C1Description("Triggered before showing a menu or submenu.")]
public System.string OnClientShowing {get; set;}
```

## OnClientShown Property

C1.Web.Wijmo.Extenders.C1Menu Namespace > C1MenuExtender Class : OnClientShown Property

Triggered once a menu or submenu has shown.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Client-Side Events")>
<C1DescriptionAttribute("Triggered once a menu or submenu has shown.")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetEventAttribute("e, item")>
<WidgetOptionNameAttribute("shown")>
Public Property OnClientShown As System.String
```

C#

```
[C1Category("Client-Side Events")]
[C1Description("Triggered once a menu or submenu has shown.")]
[System.ComponentModel.DefaultValue()]
[WidgetEvent("e, item")]
[WidgetOptionName("shown")]
public System.string OnClientShown {get; set;}
```

## Orientation Property

C1.Web.Wijmo.Extenders.C1Menu Namespace > C1MenuExtender Class : Orientation Property

Controls the root menu's orientation. All submenus are vertical regardless of the orientation of the root menu.

## Syntax

Visual Basic (Declaration)
<pre>&lt;System.ComponentModel.DefaultValueAttribute()&gt; &lt;C1DescriptionAttribute("Controls the root menu's orientation")&gt; &lt;WidgetOptionAttribute()&gt; &lt;C1CategoryAttribute("Appearance")&gt; Public Property Orientation As Orientation</pre>
C#
<pre>[System.ComponentModel.DefaultValue()] [C1Description("Controls the root menu's orientation")] [WidgetOption()] [C1Category("Appearance")] public Orientation Orientation {get; set;}</pre>

## See Also

## Position Property

C1.Web.Wijmo.Extenders.C1Menu Namespace > C1MenuExtender Class : Position Property

Specifies the location and orientation of the menu relative to the button or link used to open it. Configuration for the Position Utility Of option is excluded; it is always configured by the widget. Collision also controls collision detection automatically.

## Syntax

#### Visual Basic (Declaration)

```
<C1CategoryAttribute("Appearance")>
<C1DescriptionAttribute("Specifies the location and orientation of the menu
relative to the button or link used to open it")>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeriali
zationVisibility.Content)>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<System.Web.UI.PersistencemodeAttribute(PersistenceMode.InnerProperty)>
<System.ComponentModel.TypeConverterAttribute("System.ComponentModel.Expandab
leObjectConverter, System, Version=4.0.0.0, Culture=neutral,
PublicKeyToken=b77a5c561934e089")>
<WidgetOptionAttribute()>
Public Property Position As PositionSettings
```

#### C#

```
[C1Category("Appearance")]
[C1Description("Specifies the location and orientation of the menu
relative to the button or link used to open it")]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializat
ionVisibility.Content)]
[System.ComponentModel.NotifyParentProperty(true)]
[System.Web.UI.Persistencemode(PersistenceMode.InnerProperty)]
[System.ComponentModel.TypeConverter("System.ComponentModel.ExpandableObj
ectConverter, System, Version=4.0.0.0, Culture=neutral,
PublicKeyToken=b77a5c561934e089")]
[WidgetOption()]
public PositionSettings Position {get; set;}
```

C1.Web.Wijmo.Extenders.C1Pager Namespace : C1PagerExtender Class

The following tables list the members exposed by C1PagerExtender.

### Public Constructors

	Name	Description
	C1PagerExtender Constructor	Initializes a new instance of the C1PagerExtender class.

[Top](#)

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

		)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FirstPageClass	The class of the first-page button.
	FirstPageText	The text to display for the first-page button.
	ID	(Inherited from System.Web.UI.Control)
	LastPageClass	The class of the last-page button.
	LastPageText	The text to display for the last-page button.
	Mode	Determines the pager mode.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NextPageClass	The class of the next-page button.
	NextPageText	The text to display for the next-page button.
	OnClientPageIndexChanged	A function called when the page index is changed.
	OnClientPageIndexChanging	A function called when page index is changing. Cancellable.
	Page	(Inherited from System.Web.UI.Control)
	PageButtonCount	The number of page buttons to display in the pager.
	PageCount	Total number of pages.
	PageIndex	The zero-based index of the current page.
	Parent	(Inherited from System.Web.UI.Control)

	PreviousPageClass	The class of the previous-page button.
	PreviousPageText	The text to display for the previous-page button.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

		)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

Top

## Protected Properties

	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

Top

## Public Methods

Name	Description
 ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
 DataBind	Overloaded. (Inherited from System.Web.UI.Control)
 Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 FindControl	Overloaded. (Inherited from System.Web.UI.Control)
 Focus	(Inherited from System.Web.UI.Control)
 GetPropertyValue<V>	Gets the property value by property name. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
🔗	HasControls	(Inherited from System.Web.UI.Control)
🔗	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	ResolveClientUrl	(Inherited from System.Web.UI.Control)
🔗	ResolveUrl	(Inherited from System.Web.UI.Control)
🔗	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
🔗	AddParsedSubObject	(Inherited from System.Web.UI.Control)
🔗	BuildProfileTree	(Inherited from System.Web.UI.Control)
🔗	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	ClearCachedClientID	(Inherited from System.Web.UI.Control)
🔗	ClearChildControlState	(Inherited from System.Web.UI.Control)
🔗	ClearChildState	(Inherited from System.Web.UI.Control)
🔗	ClearChildViewState	(Inherited from System.Web.UI.Control)

	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b>

		event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## C1PagerExtender Constructor

C1.Web.Wijmo.Extenders.C1Pager Namespace > C1PagerExtender Class : C1PagerExtender Constructor

Initializes a new instance of the C1PagerExtender class.

### Syntax

Visual Basic (Declaration)	
Public Function New()	
C#	
public C1PagerExtender()	

### See Also

### Methods

For a list of all members of this type, see C1PagerExtender members.

### Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

🔗	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	Focus	(Inherited from System.Web.UI.Control)
🔗	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
🔗	HasControls	(Inherited from System.Web.UI.Control)
🔗	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	ResolveClientUrl	(Inherited from System.Web.UI.Control)
🔗	ResolveUrl	(Inherited from System.Web.UI.Control)
🔗	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
🔗	AddParsedSubObject	(Inherited from System.Web.UI.Control)
🔗	BuildProfileTree	(Inherited from System.Web.UI.Control)
🔗	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	ClearCachedClientID	(Inherited from System.Web.UI.Control)

	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)

	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Pager Namespace > C1PagerExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

C1PagerExtender Class

C1PagerExtender Members

## Render Method

C1.Web.Wijmo.Extenders.C1Pager Namespace > C1PagerExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub Render( _     ByVal writer As System.Web.UI.HtmlTextWriter _ )</pre>	
C#	
<pre>protected override void Render(     System.Web.UI.HtmlTextWriter writer )</pre>	

### Parameters

writer

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Properties

For a list of all members of this type, see C1PagerExtender members.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

		)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FirstPageClass	The class of the first-page button.
	FirstPageText	The text to display for the first-page button.
	ID	(Inherited from System.Web.UI.Control)
	LastPageClass	The class of the last-page button.
	LastPageText	The text to display for the last-page button.
	Mode	Determines the pager mode.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NextPageClass	The class of the next-page button.
	NextPageText	The text to display for the next-page button.
	OnClientPageIndexChanged	A function called when the page index is changed.
	OnClientPageIndexChanging	A function called when page index is changing. Cancellable.
	Page	(Inherited from System.Web.UI.Control)
	PageButtonCount	The number of page buttons to display in the pager.
	PageCount	Total number of pages.
	PageIndex	The zero-based index of the current page.
	Parent	(Inherited from System.Web.UI.Control)

	PreviousPageClass	The class of the previous-page button.
	PreviousPageText	The text to display for the previous-page button.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

		)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)

	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Public Properties

	Name	Description
--	------	-------------

	AnimationDelay	Gets or sets the delay time of the progress bar in milliseconds before doing animation.
	AnimationOptions	Gets or sets the option parameter of the jQuery's animation.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FillDirection	Gets or sets the direction from which the progress bar will start to fill. Possible options include: East (right-to-left), West (left-to-right), North (top-to-

		bottom), or South (bottom-to-top).
	ID	(Inherited from System.Web.UI.Control)
	IndicatorImage	Gets or sets the URL of the image for the progress indicator.
	IndicatorIncrement	Determines the increment, in pixels, that the indicator image moves forward.
	LabelAlign	Gets or sets the label's alignment on the progress bar. Possible values are: East The label is aligned on the right side of the progress bar. West The label is aligned on the left side of the progress bar. Center The label is aligned in the center of the progress bar. North The label is aligned at the top of the progress bar. South The label is aligned at the bottom of the progress bar. Running The label is aligned with the edge of the progress bar.
	LabelFormatString	The remarks need to be spaced with paragraph marks. They are currently running together: The available formats are as follows: {0} or {ProgressValue} Expresses the current progress value. {1} or {PercentProgress} Expresses the current percent of the progress bar. {2} or {RemainingProgress} Expresses the remaining progress of the progress bar. {3} or {PercentageRemaining} Expresses the remaining percent of the progress bar. {4} or {Min} Expresses the minimum value of the progress bar. {5} or {Max} Expresses the maximum value of the progress bar.
	MaxValue	Gets or sets the maximum value of the progress bar.
	MinValue	Gets or sets the minimum value of the progress bar.

	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeProgressChanging	Fires before the progress bar changes.
	OnClientProgressChanged	Fires when the progress bar is changed.
	OnClientProgressChanging	Fires when the progress bar is changing.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ToolTip	Gets or sets the format of the tooltip for the progress bar. The available formats are as follows: {0} or {ProgressValue} Expresses the current progress value. {1} or {PercentProgress} Expresses the current percent of the progress bar. {2} or {RemainingProgress} Expresses the remaining progress of the progress bar. {3} or {PercentageRemaining} Expresses the remaining percent of the progress bar. {4} or {Min} Expresses the minimum value of the progress bar. {5} or {Max} Expresses the maximum value of the progress bar.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	Gets or sets the value of the progress bar.
	ViewStateMode	(Inherited from System.Web.UI.Control)

	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1ProgressBar Namespace > C1ProgressBarExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

## Parameters

e

An **System.EventArgs** object that contains the event data.

C1.Web.Wijmo.Extenders.C1ProgressBar Namespace : C1ProgressBarExtender Class

For a list of all members of this type, see C1ProgressBarExtender members.

## Public Properties

	Name	Description
	AnimationDelay	Gets or sets the delay time of the progress bar in milliseconds before doing animation.
	AnimationOptions	Gets or sets the option parameter of the jQuery's animation.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)

	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FillDirection	Gets or sets the direction from which the progress bar will start to fill. Possible options include: East (right-to-left), West (left-to-right), North (top-to-bottom), or South (bottom-to-top).
	ID	(Inherited from System.Web.UI.Control)
	IndicatorImage	Gets or sets the URL of the image for the progress indicator.
	IndicatorIncrement	Determines the increment, in pixels, that the indicator image moves forward.
	LabelAlign	Gets or sets the label's alignment on the progress bar. Possible values are: East The label is aligned on the right side of the progress bar. West The label is aligned on the left side of the progress bar. Center The label is aligned in the center of the progress bar. North The label is aligned at the top of the progress bar. South The label is aligned at the bottom of the progress bar. Running The label is aligned with the edge of the progress bar.

	LabelFormatString	The remarks need to be spaced with paragraph marks. They are currently running together: The available formats are as follows: {0} or {ProgressValue} Expresses the current progress value. {1} or {PercentProgress} Expresses the current percent of the progress bar. {2} or {RemainingProgress} Expresses the remaining progress of the progress bar. {3} or {PercentageRemaining} Expresses the remaining percent of the progress bar. {4} or {Min} Expresses the minimum value of the progress bar. {5} or {Max} Expresses the maximum value of the progress bar.
	MaxValue	Gets or sets the maximum value of the progress bar.
	MinValue	Gets or sets the minimum value of the progress bar.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeProgressChanging	Fires before the progress bar changes.
	OnClientProgressChanged	Fires when the progress bar is changed.
	OnClientProgressChanging	Fires when the progress bar is changing.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)

	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ToolTip	Gets or sets the format of the tooltip for the progress bar. The available formats are as follows: {0} or {ProgressValue} Expresses the current progress value. {1} or {PercentProgress} Expresses the current percent of the progress bar. {2} or {RemainingProgress} Expresses the remaining progress of the progress bar. {3} or {PercentageRemaining} Expresses the remaining percent of the progress bar. {4} or {Min} Expresses the minimum value of the progress bar. {5}

		or {Max} Expresses the maximum value of the progress bar.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	Gets or sets the value of the progress bar.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## LabelFormatString Property

C1.Web.Wijmo.Extenders.C1ProgressBar Namespace > C1ProgressBarExtender Class : LabelFormatString Property

The remarks need to be spaced with paragraph marks. They are currently running together: The available formats are as follows: {0} or {ProgressValue} Expresses the current progress value. {1} or {PercentProgress} Expresses the current percent of the progress bar. {2} or {RemainingProgress} Expresses the remaining progress of the progress bar. {3} or {PercentageRemaining} Expresses the remaining percent of the progress bar. {4} or {Min} Expresses the minimum value of the progress bar. {5} or {Max} Expresses the maximum value of the progress bar.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;C1DescriptionAttribute("String that will be used as a format for the</pre>	

```
progress bar labels.six different values may be inserted in C# style string
formatting: {0} or {ProgressValue} - Current Progress Value, {1} or
{PercentProgress}- Current Percent Progress, {2} or {RemainingProgress}-
Remaining progress to be completed, {3} or {PercentageRemaining}- Percentage
remaining, {4} or {Min}- Minimum value, {5} or {Max}- Maximum value.">
<C1CategoryAttribute("Behavior")>
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
Public Property LabelFormatString As System.String
```

C#

```
[C1Description("String that will be used as a format for the progress bar
labels.six different values may be inserted in C# style string formatting:

## ToolTip Property

C1.Web.Wijmo.Extenders.C1ProgressBar Namespace > C1ProgressBarExtender Class : ToolTip Property

Gets or sets the format of the tooltip for the progress bar. The available formats are as follows:  
{0} or {ProgressValue} Expresses the current progress value. {1} or {PercentProgress} Expresses the current percent of the progress bar. {2} or {RemainingProgress} Expresses the remaining progress of the progress bar. {3} or {PercentageRemaining} Expresses the remaining percent of the progress bar. {4} or {Min} Expresses the minimum value of the progress bar. {5} or {Max} Expresses the maximum value of the progress bar.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
<WidgetOptionNameAttribute("ToolTipFormatString")>
<C1DescriptionAttribute("Set the format of the ToolTip of the progress
bar,the expression of the format like the labelFormatString")>
<WidgetOptionAttribute()>
Public Property ToolTip As System.String
```

C#

```
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
[WidgetOptionName("ToolTipFormatString")]

## Overview

### Classes

	Class	Description
	C1RatingExtender	Extender for the c1rating widget.
	RatingAnimation	Represents the RatingAnimation class which contains all settings for the animation.
	RatingHint	Represents the hint information when hover the rating star.
	RatingIconClass	Represents the RatingIconClass class which contains all settings for the icon's class.
	RatingIcons	Represents the RatingIcons class which contains all settings for the customized icons.
	RatingResetButton	Represents a reset button.

## Enumerations

	Enumeration	Description
	Direction	Use the members of this enumeration to set the value of the Direction property.
	Orientation	Use the members of this enumeration to set the value of the Orientation property.
	RatingMode	Use the members of this enumeration to set the value of the RatingMode property.
	ResetButtonPosition	Use the members of this enumeration to set the value of the ResetButton.Position property.

[Top](#)

## Public Properties

	Name	Description
	Animation	A value indicates whether to show animation and the duration for the animation.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)

	Count	Number of stars to display.
	Direction	Direction of the control.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Hint	A value that represents the hint information when hover the rating star.
	IconHeight	Height of icon. All icons should have the same height.
	Icons	A value that indicates the settings for customize rating icons.
	IconWidth	Width of icon. All icons should have the same width.
	ID	(Inherited from System.Web.UI.Control)
	Max	The maximize value that can be rated.
	Min	The minimize value that can be rated.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientHover	Fires when hover the control.
	OnClientRated	Fires after the control is rated.
	OnClientRating	Fires before the control rating. This event can be

		cancelled. "return false;" to cancel the event.
	OnClientReset	Fires when click the reset button.
	Orientation	Orientation of the control.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RatingMode	Rating mode of the control.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResetButton	A value that represents a reset button.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Split	The sections of every star split into.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-

		<p>lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	TotalValue	<p>Total value of the control.</p>
	UniqueID	<p>(Inherited from System.Web.UI.Control)</p>
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	<p>(Inherited from System.Web.UI.Control)</p>
	Value	<p>Rated value of the control.</p>
	ViewStateMode	<p>(Inherited from System.Web.UI.Control)</p>
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>

	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

🔒	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
🔒	CreateControlCollection	(Inherited from System.Web.UI.Control)
🔒	DataBindChildren	(Inherited from System.Web.UI.Control)
🔒	EnsureChildControls	(Inherited from System.Web.UI.Control)
🔒	EnsureID	(Inherited from System.Web.UI.Control)
🔒	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)

	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Rating Namespace > C1RatingExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## Properties

C1.Web.Wijmo.Extenders.C1Rating Namespace : C1RatingExtender Class

For a list of all members of this type, see C1RatingExtender members.

## Public Properties

	Name	Description
	Animation	A value indicates whether to show animation and the duration for the animation.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Count	Number of stars to display.
	Direction	Direction of the control.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Hint	A value that represents the hint information when hover the rating star.
	IconHeight	Height of icon. All icons should have the same height.
	Icons	A value that indicates the settings for customize rating icons.
	IconWidth	Width of icon. All icons should have the same width.
	ID	(Inherited from System.Web.UI.Control)
	Max	The maximize value that can be rated.
	Min	The minimize value that can be rated.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientHover	Fires when hover the control.
	OnClientRated	Fires after the control is rated.
	OnClientRating	Fires before the control rating. This event can be cancelled. "return false;" to cancel the event.
	OnClientReset	Fires when click the reset button.
	Orientation	Orientation of the control.
	Page	(Inherited from System.Web.UI.Control)

	Parent	(Inherited from System.Web.UI.Control)
	RatingMode	Rating mode of the control.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResetButton	A value that represents a reset button.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Split	The sections of every star split into.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TotalValue	Total value of the control.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	Rated value of the control.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

C1.Web.Wijmo.Extenders.C1Slider Namespace : C1SliderExtender Class

The following tables list the members exposed by C1SliderExtender.

## Public Constructors

	Name	Description
	C1SliderExtender Constructor	

Top

## Public Properties

	Name	Description
	Animate	A value indicates whether to slide handle smoothly when user click outside handle on the bar.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	DragFill	A value determines whether the fill may be dragged between the buttons.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)

	ID	(Inherited from System.Web.UI.Control)
	Max	A value indicates the maximum value of the slider.
	Min	A value indicates the minimum value of the slider.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientButtonClick	Raised when the decrement button or increment button has been clicked.
	OnClientButtonMouseDown	Raised when the mouse is down on the decrement button or decrement button.
	OnClientButtonMouseOut	Raised when the mouse is leave the decrement button or increment button.
	OnClientButtonMouseOver	Raised when the mouse is over the decrement button or increment button.
	OnClientButtonMouseUp	Raised when the mouse is up on the decrement button or increment button.
	Orientation	A value indicates whether the slider has the min at the left, the max at the right or the min at the bottom, the max at the top. Possible values: 'horizontal', 'vertical'.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Range	If the option value set to true, the slider will detect if you have two handles and create a styleable range element between these two. Two other possible values are 'min' and 'max'. A min range goes from the slider min to one handle. A max range goes from one

		handle to the slider max.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Step	A value indicates the size or amount of each interval or step the slider takes between min and max. The full specified value range of the slider (max - min) needs to be evenly divisible by the step.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when

		WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	A value indicates the value of the slider, if there's only one handle. If there is more than one handle, determines the value of the first handle.
	Values	This option can be used to specify multiple handles. If range is set to true, the length of 'values' should be 2.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Slider Namespace > C1SliderExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## Properties

C1.Web.Wijmo.Extenders.C1Slider Namespace : C1SliderExtender Class

For a list of all members of this type, see C1SliderExtender members.

## Public Properties

	Name	Description
	Animate	A value indicates whether to slide handle smoothly when user click outside handle on the bar.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	DragFill	A value determines whether the fill may be dragged between the buttons.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)

	ID	(Inherited from System.Web.UI.Control)
	Max	A value indicates the maximum value of the slider.
	Min	A value indicates the minimum value of the slider.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientButtonClick	Raised when the decrement button or increment button has been clicked.
	OnClientButtonMouseDown	Raised when the mouse is down on the decrement button or decrement button.
	OnClientButtonMouseOut	Raised when the mouse is leave the decrement button or increment button.
	OnClientButtonMouseOver	Raised when the mouse is over the decrement button or increment button.
	OnClientButtonMouseUp	Raised when the mouse is up on the decrement button or increment button.
	Orientation	A value indicates whether the slider has the min at the left, the max at the right or the min at the bottom, the max at the top. Possible values: 'horizontal', 'vertical'.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Range	If the option value set to true, the slider will detect if you have two handles and create a styleable range element between these two. Two other possible values are 'min' and 'max'. A min range goes from the slider min to one handle. A max range goes from one

		handle to the slider max.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Step	A value indicates the size or amount of each interval or step the slider takes between min and max. The full specified value range of the slider (max - min) needs to be evenly divisible by the step.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when

		WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	A value indicates the value of the slider, if there's only one handle. If there is more than one handle, determines the value of the first handle.
	Values	This option can be used to specify multiple handles. If range is set to true, the length of 'values' should be 2.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

C1.Web.Wijmo.Extenders.C1Splitter Namespace : C1SplitterExtender Class

The following tables list the members exposed by C1SplitterExtender.

## Public Constructors

	Name	Description
	C1SplitterExtender Constructor	The SplitterExtender Constructor.

[Top](#)

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	BarZIndex	A value indicates the z-index of Splitter bar.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CollapsingPanel	Specifies which panel should be collapsed after clicking the expander of splitter.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FullSplit	A value that indicates whether or not the control is full of document.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientCollapse	Gets or sets the javascript function name that would be called before panel1 is collapsed.
	OnClientCollapsed	Gets or sets the javascript function name that would be called when panel1 is collapsed by clicking the collapse/expand image.
	OnClientExpand	Gets or sets the javascript function name that would be called before panel1 is expanded out.
	OnClientExpanded	Gets or sets the javascript function name that would be called when panel1 is expanded out by clicking the collapse/expand image.
	OnClientLoad	Gets or sets the javascript function name that would be called when the splitter is loaded.
	OnClientSized	Gets or sets the javascript function name that would be called at client side when finish dragging the splitter.
	OnClientSizing	Gets or sets the javascript function name that would be called at client side when dragging the splitter.
	Orientation	A value indicating the horizontal or vertical orientation of the splitter panels.

	Page	(Inherited from System.Web.UI.Control)
	Panel1	Defines the information for top or left panel of splitter.
	Panel2	Defines the information for bottom or right panel of splitter.
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResizeSettings	A value defines the animation while the bar of splitter is beeing dragged.
	ShowExpander	A value determines whether the expander of Splitter is allowed to be shown.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SplitterDistance	A value indicates the location of the splitter, in pixels, from the left or top edge of the splitter.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)

	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	<p>Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>

	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Splitter Namespace > C1SplitterExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## Properties

C1.Web.Wijmo.Extenders.C1Splitter Namespace : C1SplitterExtender Class

For a list of all members of this type, see C1SplitterExtender members.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	BarZIndex	A value indicates the z-index of Splitter bar.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CollapsingPanel	Specifies which panel should be collapsed after clicking the expander of splitter.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FullSplit	A value that indicates whether or not the control is full of document.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientCollapse	Gets or sets the javascript function name that would be called before panel1 is collapsed.
	OnClientCollapsed	Gets or sets the javascript function name that would be called when panel1 is collapsed by clicking the collapse/expand image.
	OnClientExpand	Gets or sets the javascript function name that would be called before panel1 is expanded out.
	OnClientExpanded	Gets or sets the javascript function name that would be called when panel1 is expanded out by clicking the collapse/expand image.
	OnClientLoad	Gets or sets the javascript function name that would be called when the splitter is loaded.
	OnClientSized	Gets or sets the javascript function name that would be called at client side when finish dragging the splitter.
	OnClientSizing	Gets or sets the javascript function name that would be called at client side when dragging the splitter.

	Orientation	A value indicating the horizontal or vertical orientation of the splitter panels.
	Page	(Inherited from System.Web.UI.Control)
	Panel1	Defines the information for top or left panel of splitter.
	Panel2	Defines the information for bottom or right panel of splitter.
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResizeSettings	A value defines the animation while the bar of splitter is beeing dragged.
	ShowExpander	A value determines whether the expander of Splitter is allowed to be shown.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SplitterDistance	A value indicates the location of the splitter, in pixels, from the left or top edge of the splitter.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	<p>Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from</p>

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Public Constructors

	Name	Description
	C1SuperPanelExtender Constructor	

Top

## Public Properties

	Name	Description
	AllowResize	This value determines whether the wijsuperpanel can be resized.
	AnimationOptions	The animation properties of wijsuperpanel scrolling.

	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoRefresh	This value determines whether wijsuperpanel to automatically refresh when content size or wijsuperpanel size are changed.
	BubbleScrollingEvent	This value determines whether to fire the mouse wheel event when is scrolled to the end.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HScroller	This option contains horizontal scroller settings.

	ID	(Inherited from System.Web.UI.Control)
	KeyboardSupport	A value that determines whether wijsuperpanel provides keyboard scrolling support.
	KeyDownInterval	This value determines the time interval to call the scrolling function when doing continuous scrolling.
	MouseWheelSupport	This value determines whether wijsuperpanel has mouse wheel support.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDragStop	The name of the function which will be called when thumb buttons of scrollbars dragging stops.
	OnClientPainted	The name of the function which will be called after panel is painted.
	OnClientResized	The name of the function which will be called when resized event is fired.
	OnClientScrolled	The name of the function which will be called after scrolling occurs.
	OnClientScrolling	The name of the function which will be called before scrolling occurs.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ResizableOptions	This option determines the behavior of resizable widget.
	ShowRounder	This value determines whether to show the rounded

		corner of wijsuperpanel.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)

	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	VScroller	This option contains vertical scroller settings.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)

	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

Name	Description
 AddParsedSubObject	(Inherited from System.Web.UI.Control)
 BuildProfileTree	(Inherited from System.Web.UI.Control)
 CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClearCachedClientID	(Inherited from System.Web.UI.Control)
 ClearChildControlState	(Inherited from System.Web.UI.Control)
 ClearChildState	(Inherited from System.Web.UI.Control)
 ClearChildViewState	(Inherited from System.Web.UI.Control)
 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)

	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

	DecreaseButtonPosition	This object determines the decrease button position. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	FirstStepChangeFix	The value to add to small change or large change when scrolling the first step(scrolling from value 0). (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	HoverEdgeSpan	This value sets the width of hovering edge which will trigger the scrolling. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	IncreaseButtonPosition	This object determines the increase button position. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	ScrollBarPosition	This value determines the position of the vertical scroll bar.
	ScrollBarVisibility	This value determines the visibility of the scroll bar. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	ScrollLargeChange	This value sets the large change value of scroller. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	ScrollMax	This value sets the maximum value of scroller. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)

	ScrollMin	This value sets the minimum value of scroller. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	ScrollMinDragLength	This value sets the minimum length, in pixel, of the scroll bar thumb button. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	ScrollMode	This value determines the scroll mode of scrolling. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	ScrollSmallChange	This value sets the small change value of scroller. (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)
	ScrollValue	This value determines the scrolling position of . (Inherited from C1.Web.Wijmo.Extenders.C1SuperPanel.BaseScroller)

Properties Methods Events

C1.Web.Wijmo.Extenders.C1Tabs Namespace : C1TabsExtender Class

The following tables list the members exposed by C1TabsExtender.

### Public Constructors

	Name	Description
	C1TabsExtender Constructor	Initializes a new instance of the C1TabsExtender class.

Top

### Public Properties

	Name	Description
	AjaxOptions	Additional Ajax options to consider when loading tab content.

	Alignment	Determines the tabs' alignment in respect to the content.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Cache	Whether or not to cache remote tabs content.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Collapsible	Determines whether a tab can be collapsed by a user.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Event	The type of event to be used for selecting a tab.

	HideOption	This is an animation option for hiding the tabs panel content.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientAdd	A function called when a tab is added.
	OnClientDisable	A function called when a tab is disabled.
	OnClientEnable	A function called when a tab is enabled.
	OnClientLoad	A function called after the content of a remote tab has been loaded.
	OnClientRemove	A function called when a tab is removed.
	OnClientSelect	A function called when clicking a tab.
	OnClientShow	A function called when a tab is shown.
	Page	(Inherited from System.Web.UI.Control)
	PanelTemplate	HTML template from which a new tab panel is created in case of adding a tab with the add method or when creating a panel for a remote tab on the fly.
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Scrollable	Determines whether to wrap to the next line or scrolling is enabled when the tabs exceed the specified width.
	Selected	Gets or sets the selected index.

	ShowOption	This is an animation option for showing the tabs panel content.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Sortable	Determines whether the tab can be dragged to a new position.
	Spinner	The HTML content of this string is shown in a tab title while remote content is loading. Pass in empty string to deactivate that behavior. An span element must be present in the A tag of the title, for the spinner content to be visible.
	TabTemplate	HTML template from which a new tab is created and added. The placeholders #{href} and #{label} are replaced with the url and tab label that are passed as arguments to the add method.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the

		<p>whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	UniqueID	<p>(Inherited from System.Web.UI.Control)</p>
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	<p>(Inherited from System.Web.UI.Control)</p>
	ViewStateMode	<p>(Inherited from System.Web.UI.Control)</p>
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	WijmoCssAdapter	<p>Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Tabs Namespace > C1TabsExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

C1TabsExtender Class

C1TabsExtender Members

## Render Method

C1.Web.Wijmo.Extenders.C1Tabs Namespace > C1TabsExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub Render( _     ByVal writer As System.Web.UI.HtmlTextWriter _ )</pre>	
C#	
<pre>protected override void Render(     System.Web.UI.HtmlTextWriter writer )</pre>	

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

	Collapsible	Determines whether a tab can be collapsed by a user.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Event	The type of event to be used for selecting a tab.
	HideOption	This is an animation option for hiding the tabs panel content.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)

	OnClientAdd	A function called when a tab is added.
	OnClientDisable	A function called when a tab is disabled.
	OnClientEnable	A function called when a tab is enabled.
	OnClientLoad	A function called after the content of a remote tab has been loaded.
	OnClientRemove	A function called when a tab is removed.
	OnClientSelect	A function called when clicking a tab.
	OnClientShow	A function called when a tab is shown.
	Page	(Inherited from System.Web.UI.Control)
	PanelTemplate	HTML template from which a new tab panel is created in case of adding a tab with the add method or when creating a panel for a remote tab on the fly.
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Scrollable	Determines whether to wrap to the next line or scrolling is enabled when the tabs exceed the specified width.
	Selected	Gets or sets the selected index.
	ShowOption	This is an animation option for showing the tabs panel content.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)

	Sortable	Determines whether the tab can be dragged to a new position.
	Spinner	The HTML content of this string is shown in a tab title while remote content is loading. Pass in empty string to deactivate that behavior. An span element must be present in the A tag of the title, for the spinner content to be visible.
	TabTemplate	HTML template from which a new tab is created and added. The placeholders #{href} and #{label} are replaced with the url and tab label that are passed as arguments to the add method.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

Name	Description
------	-------------

	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Public Properties

	Name	Description
	AjaxCallback	Defines the callback for get content by AJAX mode.
	Animation	Defines the animation to show or hide the tooltip. If the showAnimation/hideAnimation is not specified, then this property works.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CalloutAnimation	Defines the animation to move the tooltip position.
	CalloutFilled	Determines the callout's class style. If true, then the callout triangle will be filled.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CloseBehavior	Determines how to close the tooltip.

	Content	Gets and sets the tooltip's content.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Group	If the group options sets the same as another tooltip widget, the two widget share one tooltip DOM.
	HideAnimation	Defines the animation to hide the tooltip.
	HideDelay	Determines the length of the delay before the tooltip disappears.
	ID	(Inherited from System.Web.UI.Control)
	Modal	Determines when show a tooltip, whether show a modal layout.
	MouseTrailing	If true, then the tooltip moves with the mouse.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientHidden	Triggered once the tooltip is hidden.
	OnClientHiding	Triggered before hiding the tooltip. If 'data.cancel' is set to true, then the tooltip is no longer hidden.
	OnClientShowing	Triggered before showing the tooltip.

	OnClientShown	Triggered once the tooltip has shown.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Position	Sets the tooltip's position mode in relation to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery ui position's position:{my:'top left',at:'right bottom',offset:}.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowAnimation	Defines the animation to show the tooltip.
	ShowCallout	Determines whether to show the callout element.
	ShowDelay	Determines the length of the delay before the tooltip appears.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)

	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	Title	Specifies a value that sets the tooltip's title.
	Triggers	Gets and sets the event that will cause the tooltip to appear.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.

		(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Public Methods

	Name	Description
≡	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
≡	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
≡	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
≡	Focus	(Inherited from System.Web.UI.Control)
≡	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
≡	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
≡	HasControls	(Inherited from System.Web.UI.Control)
≡	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
≡	ResolveClientUrl	(Inherited from System.Web.UI.Control)
≡	ResolveUrl	(Inherited from System.Web.UI.Control)
≡	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## Properties

C1.Web.Wijmo.Extenders.C1Tooltip Namespace : C1TooltipExtender Class

For a list of all members of this type, see C1TooltipExtender members.

### Public Properties

	Name	Description
	AjaxCallback	Defines the callback for get content by AJAX mode.
	Animation	Defines the animation to show or hide the tooltip. If the showAnimation/hideAnimation is not specified, then this property works.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CalloutAnimation	Defines the animation to move the tooltip position.
	CalloutFilled	Determines the callout's class style. If true, then the callout triangle will be filled.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)

	CloseBehavior	Determines how to close the tooltip.
	Content	Gets and sets the tooltip's content.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Group	If the group options sets the same as another tooltip widget, the two widget share one tooltip DOM.
	HideAnimation	Defines the animation to hide the tooltip.
	HideDelay	Determines the length of the delay before the tooltip disappears.
	ID	(Inherited from System.Web.UI.Control)
	Modal	Determines when show a tooltip, whether show a modal layout.
	MouseTrailing	If true, then the tooltip moves with the mouse.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientHidden	Triggered once the tooltip is hidden.
	OnClientHiding	Triggered before hiding the tooltip. If 'data.cancel' is set to true, then the tooltip is no longer hidden.

	OnClientShowing	Triggered before showing the tooltip.
	OnClientShown	Triggered once the tooltip has shown.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Position	Sets the tooltip's position mode in relation to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery ui position's position:{my:'top left',at:'right bottom',offset:}.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowAnimation	Defines the animation to show the tooltip.
	ShowCallout	Determines whether to show the callout element.
	ShowDelay	Determines the length of the delay before the tooltip appears.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)

	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	Title	Specifies a value that sets the tooltip's title.
	Triggers	Gets and sets the event that will cause the tooltip to appear.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value

		can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Position Property

C1.Web.Wijmo.Extenders.C1ToolTip Namespace > C1ToolTipExtender Class : Position Property

Sets the tooltip's position mode in relation to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery ui position's position:{my:'top left',at:'right bottom',offset:}.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;System.ComponentModel.TypeConverterAttribute("System.ComponentModel.ExpandableObjectConverter, System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")&gt; &lt;C1DescriptionAttribute("Sets the tooltip's position mode in relation to the 'relativeTo', 'offsetX',and 'offsetY' properties")&gt;</pre>	

```
<C1CategoryAttribute("Appearance")>
<WidgetOptionAttribute()>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSerializationVisibility.Content)>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<System.Web.UI.PersistencemodeAttribute(PersistenceMode.InnerProperty)>
Public Property Position As PositionSettings
```

C#

```
[System.ComponentModel.TypeConverter("System.ComponentModel.ExpandableObjectConverter, System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")]
[C1Description("Sets the tooltip's position mode in relation to the 'relativeTo', 'offsetX', and 'offsetY' properties")]
[C1Category("Appearance")]
[WidgetOption()]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationVisibility.Content)]
[System.ComponentModel.NotifyParentProperty(true)]
[System.Web.UI.Persistencemode(PersistenceMode.InnerProperty)]
public PositionSettings Position {get; set;}
```

## ShowAnimation Property

C1.Web.Wijmo.Extenders.C1Tooltip Namespace > C1TooltipExtender Class : ShowAnimation Property

Defines the animation to show the tooltip.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.TypeConverterAttribute("System.ComponentModel.ExpandableObjectConverter, System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")>
<C1DescriptionAttribute("Defines the animation to show the tooltip")>
```

```
<WidgetOptionAttribute()>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeriali
zationVisibility.Content)>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<System.Web.UI.PersistencemodeAttribute(PersistenceMode.InnerProperty)>
Public Property ShowAnimation As Animation
```

C#

```
[C1Category("Behavior")]
[System.ComponentModel.TypeConverter("System.ComponentModel.ExpandableObj
ectConverter, System, Version=4.0.0.0, Culture=neutral,

## ShowCallout Property

C1.Web.Wijmo.Extenders.C1Tooltip Namespace > C1TooltipExtender Class : ShowCallout Property

Determines whether to show the callout element.

## Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<C1DescriptionAttribute("Determines whether to show the callout element")>
<C1CategoryAttribute("Appearance")>
<System.ComponentModel.DefaultValueAttribute()>
Public Property ShowCallout As System.Boolean
```

C#

```

## ShowDelay Property

C1.Web.Wijmo.Extenders.C1Tooltip Namespace > C1TooltipExtender Class : ShowDelay Property

Determines the length of the delay before the tooltip appears.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Behavior")>
<C1DescriptionAttribute("Determines the length of the delay before the
tooltip appears")>
<WidgetOptionAttribute()>
Public Property ShowDelay As System.Integer
```

C#

```
[System.ComponentModel.DefaultValue()]
[C1Category("Behavior")]
[C1Description("Determines the length of the delay before the tooltip
appears")]
[WidgetOption()]
public System.int ShowDelay {get; set;}
```

## Triggers Property

C1.Web.Wijmo.Extenders.C1Tooltip Namespace > C1TooltipExtender Class : Triggers Property

Gets and sets the event that will cause the tooltip to appear.

## Syntax

Visual Basic (Declaration)

```
<WidgetOptionAttribute()>
<System.ComponentModel.DefaultValueAttribute()>
<C1DescriptionAttribute("Gets and sets the event that will cause the tooltip
to appear")>
<C1CategoryAttribute("Behavior")>
Public Property Triggers As Trigger
```

C#

```
[WidgetOption()]
[System.ComponentModel.DefaultValue()]
[C1Description("Gets and sets the event that will cause the tooltip to
appear")]
[C1Category("Behavior")]

## Enumerations

### CloseBehavior

C1.Web.Wijmo.Extenders.C1Tooltip Namespace : CloseBehavior Enumeration

Defines the behavior of close the tooltip.

## Syntax

Visual Basic (Declaration)

```
Public Enum CloseBehavior
 Inherits System.Enum
```

C#

```
public enum CloseBehavior : System.Enum
```

## Members

Member	Description
<b>Auto</b>	If it is auto ,auto hides the tooltip
<b>None</b>	If it is none, not hides the tooltip
<b>Sticky</b>	If it is sticky, show the close button and click the button to hide the tooltip.

## Public Properties

	Name	Description
	AllowDrag	Allows tree nodes to be dragged
	AllowDrop	Allows tree nodes to be dropped
	AllowEdit	Allows tree nodes to be edited at run time.
	AllowSorting	Allows tree nodes to be sorted at run time.
	AllowTriState	Allows triple state of checkBox.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoCheckNodes	Allows sub-nodes to be checked upon parent node check.
	AutoCollapse	If this option is set to true, the expanded node will be collapsed if another node is expanded.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	CollapseAnimation	Animation options for showing the child nodes when the parent node is collapsed.

	CollapseDelay	The duration of the time to delay before the node is collapsed.
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ExpandAnimation	Animation options for showing the child nodes when the parent node is expanded.
	ExpandCollapseHoverUsed	If this option is set to true, the tree will be expand/Collapse when the mouse hovers on the expand/Collapse button.
	ExpandDelay	The duration of the time to delay before the node is expanded.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientNodeCheckChanged	The name of the function which will be called when the node is checked.
	OnClientNodeCheckChanging	The name of the function which will be called before the node is checked. This event can be cancelled by returning false.
	OnClientNodeClick	The name of the function which will be called after

		the node is clicked.
	OnClientNodeCollapsed	The name of the function which will be called when the node is collapsed.
	OnClientNodeDragging	The name of the function which will be called when the node is dragged.
	OnClientNodeDragStarted	The name of the function which will be called when the node begin to be dragged.
	OnClientNodeDropped	The name of the function which will be called after the node is dropped.
	OnClientNodeExpanded	The name of the function which will be called when the node is expanded.
	OnClientNodeMouseOut	The name of the function which will be called when mouse out the node.
	OnClientNodeMouseOver	The name of the function which will be called when mouse over the node.
	OnClientNodeTextChanged	The name of the function which will be called when the text of node changed.
	OnClientSelectedNodeChanged	The name of the function which will be called when the selected nodes are changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowCheckBoxes	Allows the CheckBox to be shown on tree nodes
	ShowExpandCollapse	Allows tree nodes to be expanded or collapsed.

	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery

		Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)

	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)

[Top](#)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)

	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)

	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)

	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)

	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI

		or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
--	--	----------------------------------------------------------------------------------

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector	(Inherited from System.Web.UI.Control)

	y	
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	Items	A collection that to bind data to treemap.
	LabelFormatter	A value that indicates a function which is used to format the label of treemap item.
	MaxColor	A value that indicates the color of max value.
	MaxColorValue	A value that indicates max value. If this option is not

		set, treemap will calculate max value automatically.
	MidColor	A value that indicates the color of mid value.
	MidColorValue	A value that indicates mid value. If this option is not set, treemap will calculate mid value automatically.
	MinColor	A value that indicates the color of min value.
	MinColorValue	A value that indicates min value. If this option is not set, treemap will calculate min value automatically.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientDrilledDown	This event fires after drill down.
	OnClientDrillingDown	This event fires before drill down. This event can be cancelled, use "return false;" to cancel the event.
	OnClientItemPainted	This event fires after item is painted.
	OnClientItemPainting	This event fires before item is painting. User can create customize item in this event.
	OnClientPainted	This event fires after treemap is painted.
	OnClientPainting	This event fires before treemap is painting.
	OnClientRolledUp	This event fires after roll up.
	OnClientRollingUp	This event fires before roll up. This event can be cancelled, use "return false;" to cancel the event.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)

	ShowBackButtons	A value that indicates whether to show back buttons after treemap drilled down.
	ShowLabel	A value that indicates whether to show the label.
	ShowTitle	A value that indicates whether to show the title.
	ShowTooltip	A value that indicates whether to show the tooltip.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when

		WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TitleFormatter	A value that indicates a function which is used to format the title of treemap item.
	TitleHeight	A value that indicates the height of the title.
	Type	A value that indicates the type of treemap to be displayed.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is

		released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	Focus	(Inherited from System.Web.UI.Control)
🔗	GetProperty<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
🔗	HasControls	(Inherited from System.Web.UI.Control)
🔗	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	ResolveClientUrl	(Inherited from System.Web.UI.Control)
🔗	ResolveUrl	(Inherited from System.Web.UI.Control)
🔗	SetProperty<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
🔗	AddParsedSubObject	(Inherited from System.Web.UI.Control)
🔗	BuildProfileTree	(Inherited from System.Web.UI.Control)

	CheckIsValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)

	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

Top

## Public Events

	Name	Description
	DataBinding	(Inherited from System.Web.UI.Control)

	Disposed	(Inherited from System.Web.UI.Control)
	Init	(Inherited from System.Web.UI.Control)
	Load	(Inherited from System.Web.UI.Control)
	PreRender	(Inherited from System.Web.UI.Control)
	Unload	(Inherited from System.Web.UI.Control)

Properties Methods

C1.Web.Wijmo.Extenders.C1TreeMap Namespace : TreeMapItem Class

The following tables list the members exposed by TreeMapItem.

### Public Constructors

	Name	Description
	TreeMapItem Constructor	Overloaded.

[Top](#)

### Public Properties

	Name	Description
	Color	Gets or sets the color of treemap item.
	Items	Gets a TreeMapItem that contains the first-level child items of the current item.
	Label	Gets or sets the label of treemap item.
	MaxColor	Gets or sets the maximum color of treemap item.
	MaxColorValue	Gets or sets the maximum value of treemap item.
	MidColor	Gets or sets the middle color of treemap item.
	MidColorValue	Gets or sets the middle value of treemap item.
	MinColor	Gets or sets the minimum color of treemap item.
	MinColorValue	Gets or sets the minimum value of treemap item.
	Value	Gets or sets the value of treemap item.

[Top](#)

## Protected Properties

	Name	Description
	Props	Gets a hashtable to store property info. (Inherited from C1.Web.Wijmo.Extenders.Settings)

[Top](#)

## Protected Methods

	Name	Description
	GetProperty<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)
	SetProperty<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)
	TestProperty<V>	Tests the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)

C1.Web.Wijmo.Extenders.C1Upload Namespace : C1UploadExtender Class

The following tables list the members exposed by C1UploadExtender.

## Public Constructors

	Name	Description
	C1UploadExtender Constructor	Initializes a new instance of the C1UploadExtender class.

Top

## Public Properties

	Name	Description
	Accept	Gets or sets the accept file type of upload. audio/* All sound files are accepted video/* All video files are accepted image/* All image files are accepted MIME_type A valid MIME type, with no parameters.
	Action	Gets or sets a value that indicates the server-side handler which handles the post requested.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoSubmit	A value that indicates whether to submit the file as soon as it is selected.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	Localization	Set localization string of buttons.
	MaximumFiles	Gets or sets the maximum number of files to be uploaded.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientChange	The event associated with this property occurs when a user selects a file. This event can be cancelled.
	OnClientComplete	The event associated with this property occurs when a file upload is complete.
	OnClientProgress	The event associated with this property occurs when a file is uploading.
	OnClientTotalComplete	The event associated with this property occurs when the uploadAll button is clicked and the file upload is complete.
	OnClientTotalProgress	The event associated with this property occurs when click the uploadAll button and file uploading.
	OnClientTotalUpload	The event associated with this property occurs when the uploadAll button is clicked. This event can be cancelled.
	OnClientUpload	The event associated with this property occurs before the file is uploaded. This event can be cancelled.
	Page	(Inherited from System.Web.UI.Control)

	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

### OnPreRender Method

C1.Web.Wijmo.Extenders.C1Upload Namespace > C1UploadExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## MaximumFiles Property

C1.Web.Wijmo.Extenders.C1Upload Namespace > C1UploadExtender Class : MaximumFiles Property

Gets or sets the maximum number of files to be uploaded.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Behavior")>
<C1DescriptionAttribute("C1Upload.MaximumFiles")>
<JsonAttribute(IsSerializableToJson=True, IsSkipIfEmpty=True)>
Public Property MaximumFiles As System.Integer
```

C#

```
[System.ComponentModel.DefaultValue()]
[C1Category("Behavior")]
[C1Description("C1Upload.MaximumFiles")]
[Json(IsSerializableToJson=true, IsSkipIfEmpty=true)]
public System.int MaximumFiles {get; set;}
```

C1.Web.Wijmo.Extenders.C1Video Namespace : C1VideoExtender Class

The following tables list the members exposed by C1VideoExtender.

### Public Constructors

	Name	Description
	C1VideoExtender Constructor	Initializes a new instance of the C1VideoExtender class.

Top

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FullScreenButtonVisible	Full screen button visible. Set this property to true if you want to show the full screen button.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowControlsOnHover	Determines whether to display the controls only when hovering the mouse to the video.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)

	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

[Top](#)

## Protected Properties

	Name	Description

	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)

	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

Top

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)

	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)

	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Video Namespace > C1VideoExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

e

An **System.EventArgs** object that contains the event data.

## Properties

For a list of all members of this type, see C1VideoExtender members.

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	FullScreenButtonVisible	Full screen button visible. Set this property to true if you want to show the full screen button.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowControlsOnHover	Determines whether to display the controls only when hovering the mouse to the video.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)

	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	<p>Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ThemeSwatch	<p>A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	<p>Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	<p>A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.</p> <p>(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )</p>

	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Public Properties

	Name	Description
	ActiveIndex	Gets or sets the active index.
	AjaxOptions	Additional Ajax options to consider when loading panel content.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoPlay	Determines whether panels are automatically displayed in order.
	BackBtnText	A value that indicates the text of back button.
	Cache	Whether or not to cache remote wijwizard content.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)

	Delay	Determines the time span between panels in autoplay mode.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HideOption	The animation option for showing the panel content.
	ID	(Inherited from System.Web.UI.Control)
	Loop	Determines whether start from the first panel when reaching the end in autoplay mode.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NavButtons	Determines the type of navigation buttons used with the wijwizard.
	NextBtnText	A value that indicates the text of next button.
	OnClientAdd	This event is triggered when a panel is added.
	OnClientLoad	This event is triggered after the content of a remote panel has been loaded.
	OnClientRemove	This event is triggered when a panel is removed.
	OnClientShow	This event is triggered when a panel is shown.
	OnClientValidating	This event is triggered before moving to next panel.

	Page	(Inherited from System.Web.UI.Control)
	PanelTemplate	HTML template from which a new panel is created by adding a panel with the add method or when creating a panel for a remote panel on the fly.
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowOption	The animation option for hiding the panel content.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Spinner	The HTML content of this string is shown in a panel while remote content is loading. Pass in empty string to deactivate that behavior.
	StepHeaderTemplate	HTML template for step header when a new panel is added with the add method or when creating a panel for a remote panel on the fly.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)

	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI

		or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
--	--	----------------------------------------------------------------------------------

	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)

	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Wizard Namespace > C1WizardExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

C1WizardExtender Class  
C1WizardExtender Members

## Render Method

C1.Web.Wijmo.Extenders.C1Wizard Namespace > C1WizardExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Properties

C1.Web.Wijmo.Extenders.C1Wizard Namespace : C1WizardExtender Class

For a list of all members of this type, see C1WizardExtender members.

## Public Properties

	Name	Description
	ActiveIndex	Gets or sets the active index.

	AjaxOptions	Additional Ajax options to consider when loading panel content.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoPlay	Determines whether panels are automatically displayed in order.
	BackBtnText	A value that indicates the text of back button.
	Cache	Whether or not to cache remote wijwizard content.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Delay	Determines the time span between panels in autoplay mode.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HideOption	The animation option for showing the panel content.
	ID	(Inherited from System.Web.UI.Control)
	Loop	Determines whether start from the first panel when reaching the end in autoplay mode.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NavButtons	Determines the type of navigation buttons used with the wijwizard.
	NextBtnText	A value that indicates the text of next button.
	OnClientAdd	This event is triggered when a panel is added.
	OnClientLoad	This event is triggered after the content of a remote panel has been loaded.
	OnClientRemove	This event is triggered when a panel is removed.
	OnClientShow	This event is triggered when a panel is shown.
	OnClientValidating	This event is triggered before moving to next panel.
	Page	(Inherited from System.Web.UI.Control)
	PanelTemplate	HTML template from which a new panel is created by adding a panel with the add method or when creating a panel for a remote panel on the fly.
	Parent	(Inherited from System.Web.UI.Control)

	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowOption	The animation option for hiding the panel content.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Spinner	The HTML content of this string is shown in a panel while remote content is loading. Pass in empty string to deactivate that behavior.
	StepHeaderTemplate	HTML template for step header when a new panel is added with the add method or when creating a panel for a remote panel on the fly.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

StringListConverter Members

### GetStandardValues(ITypeDescriptorContext) Method

C1.Web.Wijmo.Extenders.Converters Namespace > StringListConverter Class > GetStandardValues Method  
: GetStandardValues(ITypeDescriptorContext) Method

The CTX.

Gets the standard values.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Overrides Function GetStandardValues( _     ByVal ctx As System.ComponentModel.ITypeDescriptorContext _ ) As System.ComponentModel.TypeConverter.StandardValuesCollection</pre>	
C#	
<pre>public override System.ComponentModel.TypeConverter.StandardValuesCollection GetStandardValues(     System.ComponentModel.ITypeDescriptorContext ctx )</pre>	

### Parameters

*ctx*

The CTX.

## See Also

### Reference

StringListConverter Class  
StringListConverter Members  
Overload List

## GetStandardValuesExclusive Method

C1.Web.Wijmo.Extenders.Converters Namespace > StringListConverter Class : GetStandardValuesExclusive Method

Gets the standard values exclusive.

## Overload List

Overload	Description
GetStandardValuesExclusive(ITypeDescriptorContext)	Gets the standard values exclusive.
GetStandardValuesExclusive()	(Inherited from System.ComponentModel.TypeConverter)

## See Also

### Reference

StringListConverter Class

## GetStandardValuesExclusive(ITypeDescriptorContext) Method

C1.Web.Wijmo.Extenders.Converters Namespace > StringListConverter Class >  
GetStandardValuesExclusive Method : GetStandardValuesExclusive(ITypeDescriptorContext) Method

The CTX.

Gets the standard values exclusive.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Overrides Function GetStandardValuesExclusive( _     ByVal ctx As System.ComponentModel.ITypeDescriptorContext _ ) As System.Boolean</pre>	
C#	
<pre>public override System.bool GetStandardValuesExclusive(</pre>	

```
System.ComponentModel.ITypeDescriptorContext ctx
)
```

### Parameters

*ctx*

The CTX.

## GetStandardValuesSupported(ITypeDescriptorContext) Method

C1.Web.Wijmo.Extenders.Converters Namespace > StringListConverter Class >

GetStandardValuesSupported Method : GetStandardValuesSupported(ITypeDescriptorContext) Method

The CTX.

Gets the standard values supported.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Overrides Function GetStandardValuesSupported( _     ByVal ctx As System.ComponentModel.ITypeDescriptorContext _ ) As System.Boolean</pre>	
C#	
<pre>public override System.bool GetStandardValuesSupported(     System.ComponentModel.ITypeDescriptorContext ctx )</pre>	

### Parameters

*ctx*

The CTX.

## See Also

### Reference

StringListConverter Class  
StringListConverter Members  
Overload List

## SetList Method

C1.Web.Wijmo.Extenders.Converters Namespace > StringListConverter Class : SetList Method

if set to `true` [exclusive].

The values.

Sets the list.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Sub SetList( _     ByVal exclusive As System.Boolean, _     ByVal values() As System.String _ )</pre>	

C#

```
protected void SetList(
 System.bool exclusive,
 System.string[] values
)
```

### Parameters

*exclusive*

if set to `true` [exclusive].

*values*

The values.
