Trademarks

The ComponentOne product name is a trademark and ComponentOne is a registered trademark of GrapeCity, Inc. All other trademarks used herein are the properties of their respective owners.

Warranty

ComponentOne warrants that the media on which the software is delivered is free from defects in material and workmanship, assuming normal use, for a period of 90 days from the date of purchase. If a defect occurs during this time, you may return the defective media to ComponentOne, along with a dated proof of purchase, and ComponentOne will replace it at no charge. After 90 days, you can obtain a replacement for the defective media by sending it and a check for \$25 (to cover postage and handling) to ComponentOne.

Except for the express warranty of the original media on which the software is delivered is set forth here, ComponentOne makes no other warranties, express or implied. Every attempt has been made to ensure that the information contained in this manual is correct as of the time it was written. ComponentOne is not responsible for any errors or omissions. ComponentOne's liability is limited to the amount you paid for the product. ComponentOne is not liable for any special, consequential, or other damages for any reason.

Copying and Distribution

While you are welcome to make backup copies of the software for your own use and protection, you are not permitted to make copies for the use of anyone else. We put a lot of time and effort into creating this product, and we appreciate your support in seeing that it is used by licensed users only.

Table of Contents

Overview	109
Help with ASP.NET Web Forms Edition	109
Adding the Extender Controls	109
Wijmo Extender Controls and Widgets	111
Quick Start.....	113
Step 1 of 4: Creating an Application	113
Step 2 of 4: Using C1AccordionExtender	114
Step 3 of 4: Using Wijaccordion	115
Step 4 of 4: Running the Project.....	116
Wijmo Control Toolkit Extender Controls.....	117
C1Accordion Extender	117
C1AccordionExtender Tutorial.....	118
Step 1 of 4: Adding Accordion Content.....	118
Step 2 of 4: Using C1AccordionExtender.....	120
Step 3 of 4: Using Wijaccordion.....	120
Step 4 of 4: Running the Project.....	121
Applying Animation to the Accordion.....	122
Changing Direction of Expanding Content Pane.....	124
Expanding Accordion Panes on Hover	126
C1Calendar Extender	127
C1Calendar Extender Tutorial.....	128
Step 1 of 3: Adding a C1Calendar Extender to the Page	128
Step 2 of 3: Customizing the Calendar	129
Step 3 of 3: Running the Project.....	130
Apply Built-in Date Format Patterns to the Calendar Title	130
Displaying the Full Calendar Month Name and Year	131
Displaying an Abbreviated Calendar Month Name and Year	131
Displaying the Calendar Month Day and Year.....	132
Displaying Multiple Calendars.....	132
Navigation Tasks	134
Navigating Calendar Using the Outer Navigation Calendar Buttons	134
Previewing the Next Calendar Month.....	135

C1Carousel Extender.....	136
C1Carousel Extender Tutorial.....	136
Step 1 of 4: Creating a Carousel.....	136
Step 2 of 4: Adding the C1Carousel Extender to the Page.....	137
Step 3 of 4: Customizing the Carousel	138
Step 4 of 4: Running the Carousel Project.....	138
Setting the Carousel Orientation	139
Setting the Carousel Pager Topic.....	141
Previewing Carousel Content	144
Chart Extenders	145
C1BarChart Extender.....	146
C1BarChart Extender Tutorial.....	147
Step 1 of 3: Adding a C1BarChart Extender to the Page	147
Step 2 of 3: Adding Data to the Chart	148
Step 3 of 3: Running the Bar Chart Project.....	149
Adding Data to Bar Chart.....	149
Setting the Axis Bounds.....	151
Applying Animation to the BarChart.....	152
Changing the Axis Annotation from Format to Currency.....	153
Rotating the Axis Annotation.....	154
Decreasing Bar Width Spacing.....	155
Styling the Axis Labels	155
Setting the ClusterOverlap	156
Setting the Cluster Width.....	157
Setting the Cluster Spacing.....	158
C1BubbleChart Extender	158
C1BubbleChartExtender Tutorial	159
Step 1 of 3: Adding a C1BubbleChartExtender to the Page.....	160
Step 2 of 3: Adding Data to the Chart	161
Step 3 of 3: Running the Bubble Chart Project	162
Creating Negative X and Y BubbleChartSeries Values.....	162
Creating Diamond Markers	165
Hiding Specific Chart Labels.....	168
Positioning Chart Labels	171

C1CompositeChartExtender	172
C1Composite Chart Extender Tutorial	173
Step 1 of 3: Adding C1Composite Chart Extender to the Page.....	173
Step 2 of 3: Adding Data to Composite Chart.....	174
Step 3 of 3: Running the Composite Chart Project	176
Adding Data to the CompositeChart.....	177
Applying Animation to the CompositeChart	184
Creating a Scatter Plot Type in the CompositeChart	184
C1LineChartExtender	188
C1LineChartExtender Tutorial	190
Step 1 of 3: Adding a C1LineChartExtender to the Page	190
Step 2 of 3: Adding Data to the LineChart.....	191
Step 3 of 3: Running the Project	192
Adding Data to the Line Chart	193
Adding Symbols to the LineChartSeries	197
Styling the Lines in LineChartSeries	199
Applying Animation to the Line Chart.....	202
C1PieChartExtender	202
C1PieChartExtender Tutorial	204
Step 1 of 3: Adding a C1PieChartExtender to the Page.....	204
Step 2 of 3: Adding Data to the Chart	205
Step 3 of 3: Running the Project	206
Adding Data to the PieChart.....	206
Creating a Doughnut Chart.....	209
Applying Animation to the Pie Chart.....	211
C1ScatterChartExtender.....	211
C1ScatterChartExtender Tutorial.....	213
Step 1 of 3: Adding a C1ScatterChartExtender to the Page.....	213
Step 2 of 3: Adding Data to the Chart	214
Step 3 of 3: Running Scatter Chart Project	215
Adding Data to the Scatter Chart.....	216
Changing the Marker for the Scatter Chart.....	221
Applying Animation to the Scatter Chart	226
C1ComboBox Extender	227

C1ComboBoxExtender Tutorial	227
Step 1 of 4: Creating a ComboBox	228
Step 2 of 4: Adding a C1ComboBoxExtender to the Page	229
Step 3 of 4: Customizing the ComboBox	229
Step 4 of 4: Running the ComboBox Project	230
Adding Data to the ComboBox	230
Adding Multiple Columns	232
Applying Animation to the ComboBox	235
C1DataSource	236
C1DataSource Tutorial	236
Step 1 of 3: Adding C1DataSource to the Page	236
Step 2 of 3: Initializing C1DataSource	238
Step 3 of 3: Running the Project	242
Reading Local Data	242
Reading Remote Data Using a Proxy	243
C1DialogExtender	245
C1DialogExtender Tutorial	245
Step 1 of 4: Creating a Dialog Box	246
Step 2 of 4: Adding a C1DialogExtender to the Page	246
Step 3 of 4: Customizing the Dialog Box	247
Step 4 of 4: Running the Project	247
Setting External Content	248
Setting Custom HTMLContent	248
Using the Modal Dialog Window Options	249
Using the Modal Dialog Option	249
Using the Alert Dialog Option	250
Using the Confirm Dialog Option	251
Animating the Dialog Window	254
C1EditorExtender	255
C1EditorExtender Tutorial	256
Step 1 of 3: Adding a C1EditorExtender to the Page	256
Step 2 of 3: Customizing the Editor	257
Step 3 of 3: Running the Editor Project	259
Using the Simple Editor Toolbar	259

Using BBCode with C1EditorExtender	260
C1EventsCalendarExtender	261
C1EventsCalendarExtender Tutorial	262
Step 1 of 3: Adding a C1EventsCalendarExtender to the Page.....	263
Step 2 of 3: Customizing the Calendar	263
Step 3 of 3: Running the Project	264
Changing the Start Date of the Events Calendar	265
Changing Data View of the Events Calendar	266
Hiding the Events Calendar Header Bar	267
Hiding the Events Calendar Navigation Bar.....	268
Changing the Culture of a Schedule.....	269
C1Expander Extender	270
C1Expander Extender Tutorial.....	271
Step 1 of 4: Creating Expanding Content	271
Step 2 of 4: Adding C1Expander Extender to the Page	272
Step 3 of 4: Customizing Expanding Text	272
Step 4 of 4: Running the Project	273
Adding Animation to the Expander	273
Displaying External Content in the Expander	276
Setting the Expand Direction at Run Time	277
Form Decorator Extenders.....	278
Form Decorator Extender Controls Tutorial.....	281
Step 1 of 3: Setting up the Project	281
Step 2 of 3: Adding Extender Controls to the Page.....	283
Step 3 of 3: Running the Project	284
C1Gallery Extender	285
C1GalleryExtender Tutorial	285
Step 1 of 4: Creating a Gallery	286
Step 2 of 4: Adding C1Gallery Extender to the Page.....	287
Step 3 of 4: Customizing the Gallery	287
Step 4 of 4: Running the Project	288
Setting the Thumbnail Orientation	288
Adding a Pager to the Gallery.....	291
Setting the Gallery Animation at Run Time.....	294

Displaying External Content in the Gallery.....	297
Displaying Flash and Video Content in the Gallery.....	298
Gauge Extenders.....	299
C1Linear Gauge Extender	299
C1LinearGaugeExtender Tutorial.....	300
Step 1 of 3: Adding a C1LinearGaugeExtender to the Page	300
Step 2 of 3: Customizing the Gauge	301
Step 3 of 3: Running the Project	302
Adding Inneractivity to LinearGauge	302
Styling LinearGauge.....	304
Adding a Logarithmic LinearGauge	306
Setting the Linear Gauge Orientation	308
C1RadialGaugeExtender	310
C1RadialGaugeExtender Tutorial.....	312
Step 1 of 3: Adding C1RadialGaugeExtender to the Page	312
Step 2 of 3: Customizing the Gauge	313
Step 3 of 3: Running the Project	313
Adding a Logarithmic RadialGauge	314
Styling RadialGauge.....	318
C1Grid Extender.....	320
C1GridExtender Tutorial.....	321
Step 1 of 3: Adding a C1GridExtender to the Page	321
Step 2 of 3: Binding the Grid to a Data Source	321
Step 3 of 3: Customizing the Grid	322
Allowing Column Resizing.....	322
Allowing Column Moving	322
Grid Extender Adding Grid Filters	323
Allowing Sorting.....	323
Input Extenders	323
InputExtenders Tutorial	325
Step 1 of 3: Adding Input Extender Controls to the Page	325
Step 2 of 3: Customizing the Input Extender Controls.....	327
Step 3 of 3: Running the Project.....	327
C1InputMaskExtender.....	328

Adding a Mask to a Drop-Down List.....	329
Creating a Mask Requiring Letters.....	331
Hiding Input in Passwords and SSNs.....	331
C1InputNumberExtender	332
Formatting Input as Currency.....	332
Input Number Formatting Input as a Percentage.....	333
Adding Numbers to Drop-Down List.....	334
C1InputDateExtender.....	335
Creating a Date Picker Drop-down Calendar.....	335
Creating a Drop-Down List of Dates.....	336
C1LightBoxExtender.....	338
C1LightBoxExtender Tutorial.....	338
Step 1 of 4: Setting up the Panel	339
Step 2 of 4: Adding a C1LightBoxExtender to the Page	339
Step 3 of 4: Customizing the C1LightBoxExtender.....	340
Step 4 of 4: Running the Project.....	340
Displaying Flash and Video Content in the LightBox.....	341
Adding Keyboard Navigation.....	342
Adding Button Controls to the LightBox	344
LightBox Animation at Run Time	345
Displaying External Content in the LightBox	347
C1ListExtender.....	348
C1ListExtender Tutorial.....	349
Step 1 of 3: Creating the List	349
Step 2 of 3: Customizing the List.....	350
Step 3 of 3: Running the Project.....	351
Multiple Selection in a List	351
C1MenuExtender.....	352
C1Menu Extender Tutorial	353
Step 1 of 4: Creating the Menu.....	353
Step 2 of 4: Adding a C1MenuExtender to the Page.....	358
Step 3 of 4: Customizing the Menu.....	359
Step 4 of 4: Running the Project.....	360
Using Custom Icons.....	360

Changing the Menu's Orientation	363
Setting Menu Functions	367
Setting Menu Triggers.....	370
Working with Shortcuts.....	373
Changing the Position of the Submenus	376
Using Menu Templates	379
Animating the Menu	380
C1PagerExtender	381
C1PagerExtender Tutorial	382
Step 1 of 3: Adding a Page Extender to the Project.....	382
Step 2 of 3: Customizing Paging.....	382
Step 3 of 3: Running the Project.....	383
Setting Pager Modes.....	383
Next Previous Mode.....	383
NextPreviousFirstLast Mode.....	384
Numeric Mode.....	384
Numeric First Last Mode	384
C1Progress Bar Extender.....	385
C1ProgressBarExtender Tutorial.....	386
Step 1 of 3: Adding a C1ProgressBarExtender to the Project.....	386
Step 2 of 3: Customizing the Progress Bar	386
Step 3 of 3: Running the Project	387
Changing the Fill Direction of the Progress Bar.....	387
C1RatingExtender	388
C1RatingExtender Tutorial	388
Step 1 of 3: Adding a C1RatingExtender to the Page.....	389
Step 2 of 3: Customizing the C1RatingExtender	389
Step 3 of 3: Running the Project	390
Animating C1RatingExtender	390
Using C1Rating Extender Events.....	390
Setting Customized C1RatingExtender Icons.....	391
Setting the String 24 Icons.....	391
Setting the String 32 Icons.....	392
Setting the Thumb Icons	393

Setting Bar Array Icons	393
Setting Customized C1RatingExtender Hints.....	394
C1Slider Extender	394
C1SliderExtender Tutorial	395
Step 1 of 3: Adding a C1SliderExtender to the Project.....	395
Step 2 of 3: Customizing the Slider Bar	396
Step 3 of 3: Running the Project	396
Setting C1SliderExtender's Thumbs	396
Setting C1SliderExtender's Range.....	397
Setting C1SliderExtender's DragFill Behavior	397
C1SplitterExtender.....	398
C1SplitterExtender Tutorial.....	399
Step 1 of 3: Adding C1SplitterExtender Controls to the Project.....	399
Step 2 of 3: Customizing the Splitters	401
Step 3 of 3: Running the Project	401
Creating a Full-Sized Splitter.....	402
Creating a Horizontal or Vertical Splitter	403
Setting the Location of the Splitter	404
C1SuperPanel Extender	406
C1SuperPanelExtender Tutorial.....	407
Step 1 of 4: Creating the Panel	407
Step 2 of 4: Adding a C1SuperPanelExtender to the Page	410
Step 3 of 4: Customizing the C1SuperPanelExtender	410
Step 4 of 4: Running the Project	411
Applying Animation to the SuperPanel.....	412
Hiding Vertical Scrolling	412
Resizing the SuperPanel	413
C1TabsExtender.....	414
C1TabsExtender Tutorial	414
Step 1 of 4: Setting up the Panel	414
Step 2 of 4: Adding a Tab Extender to the Page	417
Step 3 of 4: Customizing the Tabs.....	417
Step 4 of 4: Running the Project	418
Opening Tabs on Hover.....	419

Setting Tab Location.....	421
Tab Animation	424
C1ToolTipExtender	428
C1ToolTipExtender Tutorial.....	428
Step 1 of 3: Adding a C1ToolTipExtender.....	428
Step 2 of 3: Customizing the Tooltip	428
Step 3 of 3: Running the Project	429
C1TreeExtender	429
C1TreeExtender Tutorial	430
Step 1 of 4: Setting up the Panel	430
Step 2 of 4: Adding a C1TreeExtender to the Page.....	432
Step 3 of 4: Customizing the Tree.....	433
Step 4 of 4: Running the Project	433
Setting the Auto Collapse Option	434
Setting the Expand on Hover Option	436
Using Tree Node Checkboxes	438
Setting Tree Node Icons	440
Dynamically Adding and Removing Tree Nodes	442
Using the Drag-and-Drop Option.....	445
Using the Drag-and-Drop Within One Tree	445
Using the Drag-and-Drop Option Between Two Trees	445
C1UploadExtender.....	449
C1UploadExtender Tutorial.....	449
Step 1 of 3: Adding a C1UploadExtender to the Page.....	449
Step 2 of 3: Adding Events to the Page	450
Step 3 of 3: Running the Project	452
C1VideoExtender	452
C1VideoExtender Tutorial	453
Step 1 of 3: Adding a C1VideoExtender to the Page.....	453
Step 2 of 3: Adding a Video	453
Step 3 of 3: Running the Project	454
C1WizardExtender	454
C1WizardExtender Tutorial	455
Step 1 of 4: Setting up the Panel	455

Step 2 of 4: Adding a C1WizardExtender to the Page.....	458
Step 3 of 4: Customizing the Wizard.....	459
Step 4 of 4: Running the Project.....	459
Animating the C1WizardExtender	459
Setting the C1WizardExtender Simple Mode.....	462
Autoplaying the C1WizardExtender.....	465

Overview

The Extender controls, part of **ASP.NET Web Forms Edition**, allow you to move from Web Forms to AJAX-style development, focusing on the client side to create rich, interactive Web applications for your customers.

Extender controls provide additional properties for Web server controls at design time, allowing you to extend the functionality of the controls and provide a richer Web experience for your end users, all without having to use any code. The Wijmo control toolkit offers over 30 of these extender controls to cover all of your Web app needs!

The Wijmo extender controls are added to the Visual Studio Toolbox, but they do not have a visual presence on the page. You can, however, drag them to your source markup and assign the **TargetControlID** property to the ID of the Web server control you want to extend. The extender properties then become available for the specified control. Note that if you add an extender but do not attach it to a control, the extender will appear as a placeholder on the page.

For example, suppose you want to create an accordion. You add a standard **Panel** control to your page and enter some text that will eventually become the accordion content. If you add the **C1AccordionExtender** control to the markup and set the **TargetControlID** property to the panel, the panel content is now formatted as an accordion, and you didn't even enter a single line of code! It's so simple. And using the **C1AccordionExtender** properties, you can customize the accordion: change the expand direction, choose an animation effect, select a theme, and more.

Help with ASP.NET Web Forms Edition

Overview > Help with ASP.NET Web Forms Edition

Getting Started

For information on installing **ComponentOne Studio ASP.NET Web Forms Edition**, licensing, technical support, namespaces and creating a project with the control, please visit [Getting Started with ASP.NET Web Forms Edition](#).

Adding the Extender Controls

When you open Visual Studio, you will notice a **ASP.NET Web Forms Projects** tab containing the ComponentOne controls that have automatically been added to the Toolbox.

Note that you can manually add ComponentOne controls to the Toolbox at a later time.

Manually Adding the ASP.NET Web Forms Edition controls to the Toolbox

When you install **ComponentOne Studio ASP.NET Web Forms Edition**, the following Wijmo extender controls will appear in the Visual Studio Toolbox customization dialog box:

<i>C1AccordionExtender</i>	<i>C1BarChartExtender</i>	<i>C1BubbleChartExtender</i>	<i>C1ButtonExtender</i>
<i>C1CalendarExtender</i>	<i>C1CarouselExtender</i>	<i>C1CheckboxExtender</i>	<i>C1ComboBoxExtender</i>
<i>C1CompositeChartExtender</i>	<i>C1DialogExtender</i>	<i>C1DropdownExtender</i>	<i>C1EditorExtender</i>
<i>C1ExpanderExtender</i>	<i>C1GalleryExtender</i>	<i>C1GridExtender</i>	<i>C1InputDateExtender</i>
<i>C1InputMaskExtender</i>	<i>C1InputNumberExtender</i>	<i>C1LightBoxExtender</i>	<i>C1LinearGaugeExtender</i>
<i>C1LineChartExtender</i>	<i>C1ListExtender</i>	<i>C1MenuExtender</i>	<i>C1PagerExtender</i>
<i>C1PieChartExtender</i>	<i>C1ProgressBarExtender</i>	<i>C1RadialGaugeExtender</i>	<i>C1RadioExtender</i>
<i>C1RatingExtender</i>	<i>C1ScatterChartExtender</i>	<i>C1SliderExtender</i>	<i>C1SplitterExtender</i>
<i>C1SuperPanelExtender</i>	<i>C1TabsExtender</i>	<i>C1TextboxExtender</i>	<i>C1TooltipExtender</i>
<i>C1TreeExtender</i>	<i>C1UploadExtender</i>	<i>C1VideoExtender</i>	<i>C1WizardExtender</i>

To manually add the ASP.NET Web Forms Edition controls to the Visual Studio Toolbox:

1. Open the **Visual Studio IDE** (Microsoft Development Environment). Make sure the Toolbox is visible (select Toolbox in the View menu if necessary) and right-click it to open the context menu.
2. To make the ASP.NET Web Forms Edition components appear on their own tab in the Toolbox, select **Add Tab** from the context menu and type in the tab name, ASP.NET Web Forms Edition, for example.
3. Right-click the tab where the component is to appear and select **Choose Items** from the context menu. The **Choose Toolbox Items** dialog box opens.
4. In the dialog box, select the .NET Framework Components tab. Sort the list by Namespace (click the Namespace column header) and check the check boxes for all components belonging to namespace C1.Web.Wijmo.Extenders. Note that there is more than one component for this namespace.
5. Click **OK** to close the dialog box. The controls are added to the Visual Studio Toolbox.

Adding ASP.NET Web Forms Edition Controls to the Form

To add **ASP.NET Web Forms Edition** controls to a form:

1. Add them to the Visual Studio Toolbox.
2. Double-click each control or drag it onto your form.

Adding a Reference to the Assembly

To add a reference to the **C1.Web.Wijmo.Controls.3** or **C1.Web.Wijmo.Controls.4** assembly:

1. Select the Add Reference option from the Website menu of your Web Site project or from the Project menu of your Web Application project.
2. Select the most recent version of the ASP.NET Web Forms Edition assembly from the list on the NET tab or browse to find the C1.Web.Wijmo.Extenders.3.dll or C1.Web.Wijmo.Extenders.4.dll file and click OK.
3. Select the Form1.vb tab or go to View|Code to open the Code Editor. At the top of the file, add the following Imports directive (using in C#):

Imports C1.Web.Wijmo.Extenders

 This makes the objects defined in the **C1.Web.Wijmo.Controls.3(4)** assembly visible to the project. See [Namespaces](#) for more information.

Wijmo Extender Controls and Widgets

So what is the difference between the Wijmo control toolkit extender controls and jQuery Wijmo widgets?

The Wijmo extender controls make good use of the ASP.NET AJAX partial-page rendering and client-script functionality features of the Microsoft AJAX Library, allowing you to create a smooth, interactive UI for your end users. If you don't know jQuery and JavaScript, you don't need to worry about it with the toolkit extender controls.

The Wijmo widgets use the hottest technologies and allow you to easily create a cool, interactive UI with little code. If you already know JavaScript, there is no learning curve.

Wijmo extender controls and Wijmo widgets are completely independent of each other; however, they can be used in the same web application.

Suppose you want to create an accordion in your application. You add a **Panel** control to your page, like this:

Adding a Panel Control	Copy Code
<pre><asp:Panel ID="Panel1" runat="server"> <h3>Pane 1</h3> <div></pre>	

```

        <p>

        Pane 1 content

        </p>

    </div>

    <h3>Pane 2</h3>

    <div>

        <p>

        Pane 2 content

        </p>

    </div>

    <h3>

    Pane 3</h3>

    <div>

        <p>

        Pane 3 content

        </p>

    </div>

</asp:Panel>

```

To create a formatted accordion that expands when a user mouses over it, the C1AccordionExtender control markup would look like this:

```

<cc1:C1AccordionExtender ID="C1AccordionExtender1" runat="server"
TargetControlID="Panel1" Event="mouseover">

    </cc1:C1AccordionExtender>

```

If you are using wijaccordion, the JavaScript looks like this:

Adding a wijaccordion	Copy Code
<pre> <script id="scriptInit" type="text/javascript"> \$(document).ready(function () { \$("#<%= Panel1.ClientID %>").wijaccordion({ event: "mouseover" }); }); </script> </pre>	

Visit <http://wijmo.com> for a list of Wijmo widgets, demos, documentation, support and more. Note that if you use the Wijmo widgets, you should reference the latest CDN dependencies at <http://www.wijmo.com/downloads/cdn>.

Quick Start

This quick start demonstrates how to attach the **C1AccordionExtender** to a **Panel** control and customize the accordion by setting the extender properties. You will also use the **wijaccordion** widget to set the event that expands the accordion panes.

Step 1 of 4: Creating an Application

In this topic you will add a **Panel** control with some content that will eventually become the accordion content.

1. Begin by creating an ASP.NET Web application. Note that if using Visual Studio 2008, you must add a **ScriptManager** control to the form. If using Visual Studio 2005, the **ScriptManager** control is automatically added to the form.
2. While in Design view, navigate to the Visual Studio Toolbox and double-click the **Panel** control to add a panel to the main content of your page.
3. Add some content to the panel. For example:
- 4.
- 5.
6. `<h3>Pane 1</h3>`
7. `<div>`
8. `<p>`
9. `Mauris mauris ante, blandit et, ultrices a, suscipit eget, quam. Integer ut neque.`

```

10.      Vivamus nisi metus, molestie vel, gravida in, condimentum
        sit amet, nunc. Nam a
11.      nibh. Donec suscipit eros. Nam mi. Proin viverra leo ut
        odio. Curabitur malesuada.
12.      Vestibulum a velit eu ante scelerisque vulputate.
13.      </p>
14.      </div>
15.      <h3>Pane 2</h3>
16.      <div>
17.      <p>
18.      Sed non urna. Donec et ante. Phasellus eu ligula.
        Vestibulum sit amet purus. Vivamus
19.      hendrerit, dolor at aliquet laoreet, mauris turpis
        porttitor velit, faucibus interdum
20.      tellus libero ac justo. Vivamus non quam. In suscipit
        faucibus urna.
21.      </p>
22.      </div>
23.      <h3>
24.      Pane 3</h3>
25.      <div>
26.      <p>
27.      Nam enim risus, molestie et, porta ac, aliquam ac, risus.
        Quisque lobortis. Phasellus
28.      pellentesque purus in massa. Aenean in pede. Phasellus ac
        libero ac tellus pellentesque
29.      semper. Sed ac felis. Sed commodo, magna quis lacinia
        ornare, quam ante aliquam
30.      nisi, eu iaculis leo purus venenatis dui.
31.      </p>
32.      </div>
33.      <h3>
34.      Pane 4</h3>
35.      <div>
36.      <p>
37.      Cras dictum. Pellentesque habitant morbi tristique
        senectus et netus et malesuada
38.      fames ac turpis egestas. Vestibulum ante ipsum primis in
        faucibus orci luctus et
39.      ultrices posuere cubilia Curae; Aenean lacinia mauris vel
        est.
40.      </p>
41.      <p>
42.      Suspendisse eu nisl. Nullam ut libero. Integer dignissim
        consequat lectus. Class
43.      aptent taciti sociosqu ad litora torquent per conubia
        nostra, per inceptos himenaeos.
44.      </p>
45.      </div>
46.

```

In the next step you will use the **AccordionExtender** control to create and customize the accordion.

Step 2 of 4: Using C1AccordionExtender

In this step, you will add an **C1AccordionExtender** control to associate with the panel to create the accordion and set some of its properties.

1. Click the Panel smart tag and select Add Extender from the **Panel Tasks** menu.
 2. In the **Extender Wizard**, select C1AccordionExtender and click OK. An AccordionExtender control is added to the page and the TargetControlID is set to Panel1.
 - 3.
 - 4.
 5.

```
<c1:C1AccordionExtender ID="Panel1_C1AccordionExtender"
runat="server"
```
 6.

```
TargetControlID="Panel1">
```
 7.

```
</c1:C1AccordionExtender>
```
 - 8.
- Select **View | Properties Window** in the Visual Studio menu.
 - Click the drop-down list at the top of the window and select **Panel1_C1AccordionExtender**.

Next to the **ExpandDirection** property, click the drop-down arrow and select Right. Next to the **Theme** property, select midnight. In the next step you will set the expand event with wijaccordion.

Step 3 of 4: Using Wijaccordion

In this topic, you will use the wijaccordion widget to set the event that expands the accordion panes. This step was included to show that widgets can be used on the same page as extender controls. For more information on the Wijmo widgets, visit <http://wijmo.com>.

1. Enter references for the CSS and JavaScript libraries within the <asp:Content> tags of the project:
- 2.
- 3.
4.

```
<asp:Content ID="HeaderContent" runat="server"
ContentPlaceHolderID="HeadContent">
```
5.

```
<link href="http://cdn.wijmo.com/themes/aristo/jquery-wijmo.css"
rel="stylesheet" type="text/css" />
```
6.

```
<link href="http://cdn.wijmo.com/jquery.wijmo-open.1.1.5.css"
rel="stylesheet" type="text/css" />
```
7.

```
<link href="http://cdn.wijmo.com/jquery.wijmo-
complete.1.1.5.css" rel="stylesheet" type="text/css" />
```
8.

```
<script src="http://ajax.microsoft.com/ajax/jquery/jquery-
1.5.1.min.js" type="text/javascript">
```
9.

```
</script>
```
10.

```
<script
src="http://ajax.aspnetcdn.com/ajax/jquery.ui/1.8.11/jquery-
ui.min.js" type="text/javascript">
```
11.

```
</script>
```
12.

```
<script src="http://cdn.wijmo.com/external/jquery.bgiframe-
2.1.3-pre.js" type="text/javascript">
```
13.

```
</script>
```
14.

```
<script src="http://cdn.wijmo.com/external/jquery.glob.min.js"
type="text/javascript">
```
15.

```
</script>
```
16.

```
<script
src="http://cdn.wijmo.com/external/jquery.mousewheel.min.js"
type="text/javascript">
```
17.

```
</script>
```

```

18. <script src="http://cdn.wijmo.com/external/raphael-min.js"
    type="text/javascript">
19. </script>
20. <script src="http://cdn.wijmo.com/jquery.wijmo-
    open.1.1.5.min.js" type="text/javascript">
21. </script>
22. <script src="http://cdn.wijmo.com/jquery.wijmo-
    complete.1.1.5.min.js" type="text/javascript">
23. </script>
24. </asp:Content>
25.

```

2. Enter the following JavaScript after the references within the <asp:Content> tags. The accordion panes will expand when a user mouses over them.

```

3.
4.
5. <script id="scriptInit" type="text/javascript">
6.     $(document).ready(function () {
7.         $("#<%= Panel1.ClientID %>").wijaccordion({
8.             event: "mouseover",
9.
10.            });
11.        });
12. </script>
13.

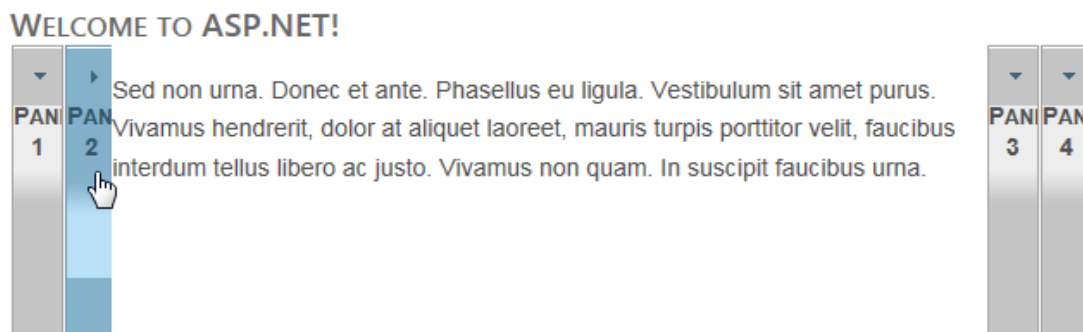

```

3. In the next step, run the project to see your accordion.

Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- The text in the panel was formatted as an accordion using the AccordionExtender control.
- Mouse over each header in the accordion. It expands so that the content appears to the right.

Congratulations! You have successfully completed the **Wijmo Extender Control Quick Start**.

Wijmo Control Toolkit Extender

Controls

The Wijmo control toolkit provides over 20 extender controls to help you create a rich, interactive Web application.

The tutorials provided for each extender control assume you have created an ASP.NET Web application and are using Visual Studio 2010. Steps may vary slightly in other versions of Visual Studio.

C1Accordion Extender

An accordion allows you to display formatted text, images, and Web pages in an organized list of expandable panes that are revealed one pane at a time. Users simply select a pane to expand it and view the specified information while the other panes are collapsed, automatically organizing your user interface and optimizing the screen real estate.

C1AccordionExtender Markup

The following markup creates a C1AccordionExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1AccordionExtender ID="Panel1_C1AccordionExtender" runat="server"
```

```
TargetControlID="Panel1">
```

`</cc1:C1AccordionExtender>`

C1AccordionExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1Accordion Extender > C1AccordionExtender Tutorial

This tutorial demonstrates how to attach the C1AccordionExtender to a **Panel** control and customize the accordion by setting the extender properties.

Step 3 of 4: Using Wijaccordion

Step 4 of 4: Running the Project

Step 1 of 4: Adding Accordion Content

Wijmo Control Toolkit Extender Controls > C1Accordion Extender > C1AccordionExtender Tutorial > Step 1 of 4: Adding Accordion Content

In this topic you will add a **Panel** control with some content that will eventually become the accordion content.

1. While in Design view of your Web application, navigate to the Visual Studio Toolbox and double-click the Panel control to add a panel to the main content of your page.
2. Add some content to the panel. For example:

```
<h3>Pane 1</h3>
```

```
<div>
```

```
<p>
```

```

Mauris mauris ante, blandit et, ultrices a, suscipit
eget, quam. Integer ut neque.
```

```

Vivamus nisi metus, molestie vel, gravida in,
condimentum sit amet, nunc. Nam a
```

nibh. Donec suscipit eros. Nam mi. Proin viverra leo
ut odio. Curabitur malesuada.

Vestibulum a velit eu ante scelerisque vulputate.

</p>

</div>

<h3>Pane 2</h3>

<div>

<p>

Sed non urna. Donec et ante. Phasellus eu ligula.
Vestibulum sit amet purus. Vivamus
hendrerit, dolor at aliquet laoreet, mauris turpis
porttitor velit, faucibus interdum
tellus libero ac justo. Vivamus non quam. In suscipit
faucibus urna.

</p>

</div>

<h3>

Pane 3</h3>

<div>

<p>

Nam enim risus, molestie et, porta ac, aliquam ac,
risus. Quisque lobortis. Phasellus

pellentesque purus in massa. Aenean in pede.
Phasellus ac libero ac tellus pellentesque
semper. Sed ac felis. Sed commodo, magna quis lacinia
ornare, quam ante aliquam
nisi, eu iaculis leo purus venenatis dui.

</p>

</div>

<h3>

Pane 4

</h3>

<div>

<p>

Cras dictum. Pellentesque habitant morbi tristique
senectus et netus et malesuada
fames ac turpis egestas. Vestibulum ante ipsum primis
in faucibus orci luctus et
ultrices posuere cubilia Curae; Aenean lacinia mauris

vel est.

```
</p>
<p>
```

Suspendisse eu nisl. Nullam ut libero. Integer dignissim consequat lectus. Class aptent taciti sociosqu ad litora torquent per conubia nostra, per inceptos himenaeos.

```
</p>
```

- 2.
3.

```
</div>
```
- 4.
5. Now add a C1AccordionExtender to the page.

Step 2 of 4: Using C1AccordionExtender

In this step, you will add an **C1AccordionExtender** control to associate with the panel to create the accordion and set some of its properties.

1. Click the Panel smart tag and select Add Extender from the **Panel Tasks** menu.
 2. In the **Extender Wizard**, select C1AccordionExtender and click OK. An AccordionExtender control is added to the page and the TargetControlID is set to Panel1.
 - 3.
 - 4.
 5.

```
<c1:C1AccordionExtender ID="Panel1_C1AccordionExtender"
runat="server"
```
 6.

```
TargetControlID="Panel1">
```
 7.

```
</c1:C1AccordionExtender>
```
 - 8.
- Select **View | Properties Window** in the Visual Studio menu.
 - Click the drop-down list at the top of the window and select **Panel1_C1AccordionExtender**.

Next to the **ExpandDirection** property, click the drop-down arrow and select Right. Next to the **Theme** property, select midnight. In the next step you will set the expand event with wijaccordion.

Step 3 of 4: Using Wijaccordion

In this topic, you will use the wijaccordion widget to set the event that expands the accordion panes. This step was included to show that widgets can be used on the same page as extender controls. For more information on the Wijmo widgets, visit <http://wijmo.com>.

1. Enter references for the CSS and JavaScript libraries within the <asp:Content> tags of the project:
- 2.
- 3.
4.

```
<asp:Content ID="HeaderContent" runat="server"
ContentPlaceHolderID="HeadContent">
```

```

5. <link href="http://cdn.wijmo.com/themes/aristo/jquery-wijmo.css"
   rel="stylesheet" type="text/css" />
6. <link href="http://cdn.wijmo.com/jquery.wijmo-open.1.1.5.css"
   rel="stylesheet" type="text/css" />
7. <link href="http://cdn.wijmo.com/jquery.wijmo-
   complete.1.1.5.css" rel="stylesheet" type="text/css" />
8. <script src="http://ajax.microsoft.com/ajax/jquery/jquery-
   1.5.1.min.js" type="text/javascript">
9. </script>
10. <script
    src="http://ajax.aspnetcdn.com/ajax/jquery.ui/1.8.11/jquery-
    ui.min.js" type="text/javascript">
11. </script>
12. <script src="http://cdn.wijmo.com/external/jquery.biframe-
    2.1.3-pre.js" type="text/javascript">
13. </script>
14. <script src="http://cdn.wijmo.com/external/jquery.glob.min.js"
    type="text/javascript">
15. </script>
16. <script
    src="http://cdn.wijmo.com/external/jquery.mousewheel.min.js"
    type="text/javascript">
17. </script>
18. <script src="http://cdn.wijmo.com/external/raphael-min.js"
    type="text/javascript">
19. </script>
20. <script src="http://cdn.wijmo.com/jquery.wijmo-
    open.1.1.5.min.js" type="text/javascript">
21. </script>
22. <script src="http://cdn.wijmo.com/jquery.wijmo-
    complete.1.1.5.min.js" type="text/javascript">
23. </script>
24. </asp:Content>
25.

```

2. Enter the following JavaScript after the references within the <asp:Content> tags. The accordion panes will expand when a user mouses over them.

```

3.
4.
5. <script id="scriptInit" type="text/javascript">
6.     $(document).ready(function () {
7.         $("#<%= Panell.ClientID %>").wijaccordion({
8.             event: "mouseover",
9.
10.         });
11.     });
12. </script>
13.

```

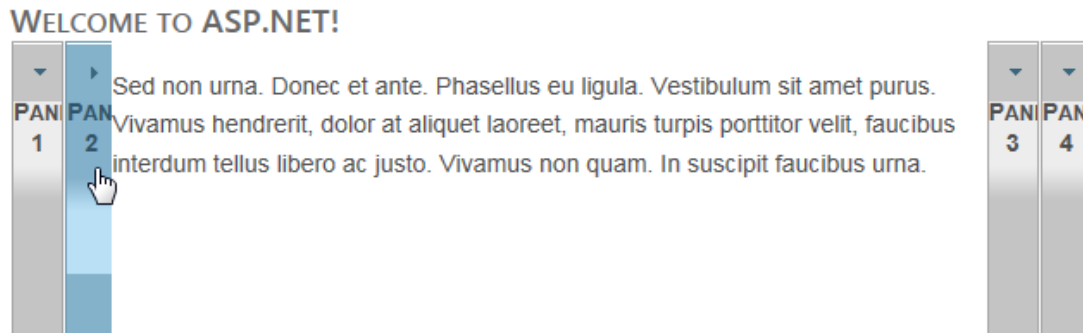

3. In the next step, run the project to see your accordion.

Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- The text in the panel was formatted as an accordion using the AccordionExtender control.

- Mouse over each header in the accordion. It expands so that the content appears to the right.

Congratulations! You have successfully completed the **Wajmo Extender Control Quick Start**.

Applying Animation to the Accordion

Wajmo Control Toolkit Extender Controls > C1Accordion Extender > Applying Animation to the Accordion

The C1AccordionExtender control supports animation. Simply set the **Animated Effect** property to take advantage of this feature.

```
<cc1:C1AccordionExtender ID="Panel1_C1AccordionExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
        <Animated Effect="easeInOutCirc" />
```

```
</cc1:C1AccordionExtender>
```

1. Create an ASP.NET Web application.
2. While in Design view of your Web application, navigate to the Visual Studio Toolbox and double-click the Panel control to add a panel to the main content of your page.
3. Add some content to the panel within the <asp:Panel> tags. For example:

```
<h3>Pane 1</h3>
```

```
    <div>
```

```
        <p>
```

```
            Pane 1 content here.
```

```
        </p>
```

```
    </div>
```

```

<h3>Pane 2</h3>

<div>

    <p>

        Pane 2 content here.

    </p>

</div>

<h3>

    Pane 3</h3>

<div>

    <p>

        Pane 3 content here.

    </p>

</div>

<h3>

    Pane 4</h3>

<div>

    <p>

        Pane 4 content here.

    </p>

</div>

```

4. Click the Panel smart tag and select Add Extender from the Panel Tasks menu.
5. In the Extender Wizard, select C1AccordionExtender and click OK. A C1AccordionExtender control is added to the page and the TargetControlID is set to Panel1.

```

<cc1:C1AccordionExtender ID="Panel1_C1AccordionExtender" runat="server"
TargetControlID="Panel1">

```

```

</cc1:C1AccordionExtender>

```

3. Select **View | Properties** Window in the Visual Studio menu.

4. Click the drop-down list at the top of the Properties window and select **Panel1_C1AccordionExtender**.
5. Expand the **Animated** property and enter an animation effect next to the **Effect** property.

Changing Direction of Expanding Content Pane

Wijmo Control Toolkit Extender Controls > C1Accordion Extender > Changing Direction of Expanding Content Pane

The C1AccordionExtender control allows users to expand pane content from the top, bottom, left, or right. Simply set the **ExpandDirection** property to take advantage of this feature.

```
<cc1:C1AccordionExtender ID="Panel1_C1AccordionExtender" runat="server"
```

```
    TargetControlID="Panel1" ExpandDirection="Right">
```

1. Create an ASP.NET Web application.
2. While in Design view of your Web application, navigate to the Visual Studio Toolbox and double-click the Panel control to add a panel to the main content of your page.
3. Add some content to the panel within the <asp:Panel> tags. For example:

```
<h3>Pane 1</h3>
```

```
<div>
```

```
<p>
```

```
    Pane 1 content here.
```

```
</p>
```

```
</div>
```

```
<h3>Pane 2</h3>
```

```
<div>
```

```
<p>
```

```
    Pane 2 content here.
```

```
</p>
```

```
</div>
```

```
<h3>
```

```

    Pane 3</h3>

<div>

    <p>

        Pane 3 content here.

    </p>

</div>

<h3>

    Pane 4</h3>

<div>

    <p>

        Pane 4 content here.

    </p>

</div>

```

4. Click the Panel smart tag and select Add Extender from the Panel Tasks menu.
5. In the Extender Wizard, select C1AccordionExtender and click OK. A C1AccordionExtender control is added to the page and the TargetControlID is set to Panel1.

```
<cc1:C1AccordionExtender ID="Panel1_C1AccordionExtender" runat="server"
TargetControlID="Panel1">
```

```
</cc1:C1AccordionExtender>
```

6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1_C1AccordionExtender**.
8. Click the drop-down arrow next to the **ExpandDirection** property and select Top, Right, Left, or Bottom.

Expanding Accordion Panes on Hover

Wijmo Control Toolkit Extender Controls > C1Accordion Extender > Expanding Accordion Panes on Hover

The C1AccordionExtender control allows users to expand pane content by hovering the pane. Simply set the **Event** property to take advantage of this feature.

```
<cc1:C1AccordionExtender ID="Panel1_C1AccordionExtender" runat="server"
TargetControlID="Panel1" Event="mouseover">
```

1. Create an ASP.NET Web application.
2. While in Design view of your Web application, navigate to the Visual Studio Toolbox and double-click the Panel control to add a panel to the main content of your page.
3. Add some content to the panel within the <asp:Panel> tags. For example:

```
<h3>Pane 1</h3>
```

```
<div>
```

```
<p>
```

```
    Pane 1 content here.
```

```
</p>
```

```
</div>
```

```
<h3>Pane 2</h3>
```

```
<div>
```

```
<p>
```

```
    Pane 2 content here.
```

```
</p>
```

```
</div>
```

```
<h3>
```

```
    Pane 3</h3>
```

```
<div>
```

```
<p>
```

```
    Pane 3 content here.
```

```
</p>
```

```

</div>

<h3>

    Pane 4</h3>

<div>

    <p>

        Pane 4 content here.

    </p>

</div>

```

4. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
5. In the Extender Wizard, select C1AccordionExtender and click OK. A C1AccordionExtender control is added to the page and the TargetControlID is set to Panel1.

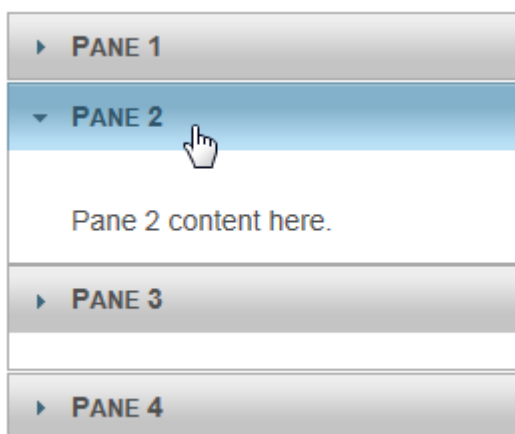

```

<cc1:C1AccordionExtender ID="Panel1_C1AccordionExtender" runat="server"
TargetControlID="Panel1">

    </cc1:C1AccordionExtender>

```

6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1_C1AccordionExtender**.
8. Set the Event property to mouseover. When your run the application, the panes expand when the mouse hovers over the pane headers.

C1Calendar Extender

Use the C1CalendarExtender to create a single-month calendar or a table of months with customizable styles and navigation elements.

C1CalendarExtender Markup

The following markup creates a C1CalendarExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1CalendarExtender ID="Panel1_C1CalendarExtender" runat="server"
    DisplayDate="11/03/2011 13:17:14" TargetControlID="Panel1">
</cc1:C1CalendarExtender>
```

C1Calendar Extender Tutorial

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > C1Calendar Extender Tutorial

This tutorial demonstrates how to attach the C1CalendarExtender to a **Panel** control and customize the calendar by setting the extender properties.

Step 1 of 3: Adding a C1Calendar Extender to the Page

Step 2 of 3: Customizing the Calendar

Step 3 of 3: Running the Project

Step 1 of 3: Adding a C1Calendar Extender to the Page

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > C1Calendar Extender Tutorial > Step 1 of 3: Adding a C1Calendar Extender to the Page

In this topic you add some content to a **Panel** control and associate a **C1CalendarExtender** control with it to create a calendar.

1. In your Web application, add a standard **Panel** control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1CalendarExtender** and click **OK**. A **C1CalendarExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.

```
<cc1:C1CalendarExtender ID="Panel1_C1CalendarExtender" runat="server"
    DisplayDate="11/03/2011 13:17:14" TargetControlID="Panel1">
</cc1:C1CalendarExtender>
```

In the next step you will set some of the extender properties.

Step 2 of 3: Customizingthe Calendar

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > C1Calendar Extender Tutorial > Step 2 of 3: Customizingthe Calendar

In this topic you will set some of the properties for the **C1CalendarExtender**.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CalendarExtender**.
3. Set the **C1CalendarExtender.AllowPreview** property to **True**.
4. Click the drop-arrow next to the **C1CalendarExtender.MinDate** property and set it to 5/16/2011.
5. Click the drop-arrow next to the **C1CalendarExtender.MaxDate** property and set it to 5/27/2011.
6. Set the **C1CalendarExtender.NavButtons** property to **Quick**. The markup for the **C1CalendarExtender** will now look like this:

```
<cc1:C1CalendarExtender ID="Panel1_C1CalendarExtender" runat="server"
    DisplayDate="05/03/2011 16:48:52" TargetControlID="Panel1"
    AllowPreview="True" MaxDate="2011-05-27" MinDate="2011-05-16"
    NavButtons="Quick">
</cc1:C1CalendarExtender>
```

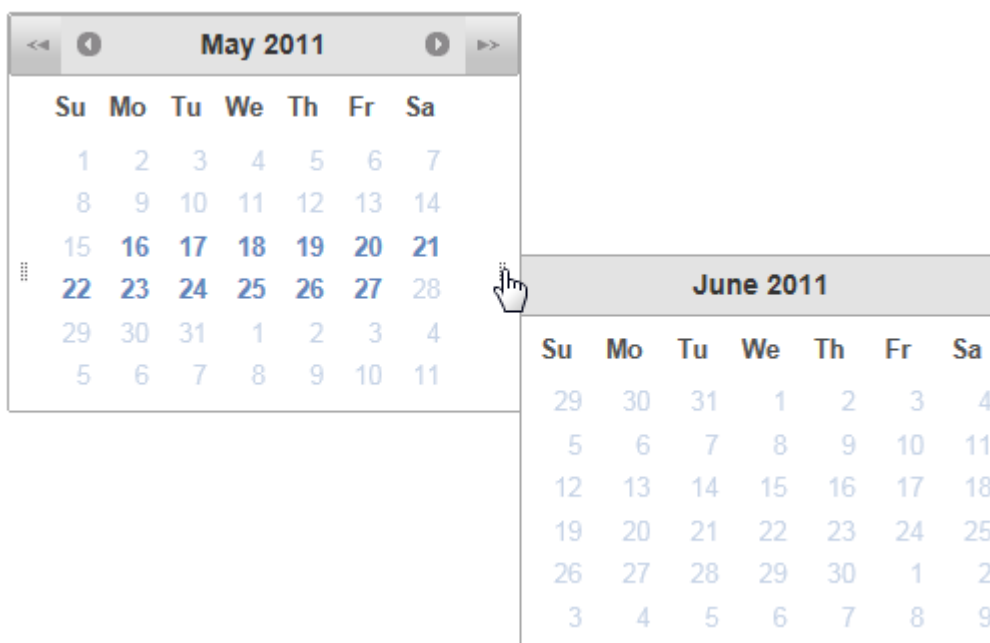

Now run the project to see the formatted calendar.

Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > C1Calendar Extender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the following:

- Notice that only the **C1CalendarExtender.MinDate** to the **C1CalendarExtender.MaxDate** dates are enabled on the calendar.
- Hover over the preview indicator to show the calendar for the previous and next month.
- Click the **Quick Next** or **Quick Previous** buttons to jump forward or backward one year.

Apply Built-in Date Format Patterns to the Calendar Title

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Apply Built-in Date Format Patterns to the Calendar Title

This topic shows how to customize the calendar title to display specific date formats using the built-in date format patterns.

To format the calendar title using the **TitleFormat** property you can either display the full calendar month name and year, an abbreviated calendar month name and year, calendar month day and year, an abbreviated calendar month name range and year for multiple calendars, full calendar month name range and year for multiple calendars, or the calendar month day range and year for multiple calendars.

The following topics demonstrate various calendar title customization options.

Displaying the Full Calendar Month Name and Year

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Apply Built-in Date Format Patterns to the Calendar Title > Displaying the Full Calendar Month Name and Year

To display the full calendar month name and year, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CalendarExtender**.
3. Select the **TitleFormat** property and enter the date format pattern, , "MMMM yyyy".

The full calendar month and year is displayed on the calendar title.

April 2012						
Su	Mo	Tu	We	Th	Fr	Sa
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	1	2	3	4	5
6	7	8	9	10	11	12

Displaying an Abbreviated Calendar Month Name and Year

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Apply Built-in Date Format Patterns to the Calendar Title > Displaying an Abbreviated Calendar Month Name and Year

To display an abbreviated calendar month name and year, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CalendarExtender**.
3. Select the **TitleFormat** property and enter the date format pattern, "MMM yyyy".

The abbreviated calendar month and year is displayed on the calendar title.

Apr 2012						
Su	Mo	Tu	We	Th	Fr	Sa
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	1	2	3	4	5
6	7	8	9	10	11	12

Displaying the Calendar Month Day and Year

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Apply Built-in Date Format Patterns to the Calendar Title > Displaying the Calendar Month Day and Year

To display the calendar month day and year, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CalendarExtender**.
3. Select the **TitleFormat** property and enter the date format pattern, "MM-yyyy".

The calendar day month and year is displayed on the calendar title.

04-2012						
Su	Mo	Tu	We	Th	Fr	Sa
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	1	2	3	4	5
6	7	8	9	10	11	12

Displaying Multiple Calendars

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Displaying Multiple Calendars

You can display more than one calendar by setting either the **MonthCols** or **MonthRows** property to an integer value greater than one. The **MonthCols** property determines the number of month view columns and the **MonthRows** property determines the number of month view rows.

The **MonthCols** and **MonthRows** properties can be used on the client side like the following:

Displaying Multiple Calendars in Design View:

To display multiple calendars in design view, follow these steps:

1. Select View | Properties Window in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select Panel1_C1CalendarExtender.
3. Enter 2 next to the MonthCols property and enter 2 next to the MonthRows property.

Displaying Multiple Calendars in Source View:

To display multiple calendars in source view, click the source tab and add the following code in your source file:

```
<cc1:C1CalendarExtender ID="Panel1_C1CalendarExtender" runat="server"
    DisplayDate="04/23/2012 16:38:24" MonthCols="2" MonthRows="2"
    TargetControlID="Panel1" TitleFormat="MMMM yyyy">

</cc1:C1CalendarExtender>
```

This topic illustrates the following:

The **C1Calendar** displays a 2 row, 2 column calendar.

April 2012							May 2012

Navigation Tasks

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Navigation Tasks

The following topics show how to use the calendar navigation options.

Navigating Calendar Using the Outer Navigation Calendar Buttons

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Navigation Tasks > Navigating Calendar Using the Outer Navigation Calendar Buttons

The outer navigation buttons represent the double arrow previous and next buttons. Set the **NavButtons** property to **quick** to show the outer navigation buttons.

The **QuickNavStep** property applies to the outer navigation buttons. The default value for this property is set to 12 which means that clicking the previous or next navigation button navigates every twelve calendar months.

In Design View:

To navigate every three calendar months using the outer navigation buttons, complete the following steps:

1. Select **View | Properties** Window in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CalendarExtender**.
3. In the **Panel1_C1CalendarExtender** Properties window set the NavButtons to **Quick**.
4. Enter 3 next to the **QuickNavStep** property.

In Source View:

To navigate every three calendar months using the outer navigation buttons in source view, click the source tab and add the following code in your source file:

```
<cc1:C1CalendarExtender ID="Panel1_C1CalendarExtender"
runat="server"

    DisplayDate="04/23/2012 16:38:24"

    TargetControlID="Panel1" TitleFormat="MMMM yyyy"
NavButtons="Quick"

    QuickNavStep="3">

</cc1:C1CalendarExtender>
```

This topic illustrates the following:

Click on the **Quick Next** button to jump 3 calendar months ahead:

Previewing the Next Calendar Month

Wijmo Control Toolkit Extender Controls > C1Calendar Extender > Navigation Tasks > Previewing the Next Calendar Month

In circumstances when you don't want to change the current month when checking for the beginning and ending dates of the next or previous you can use the calendar preview feature. The preview Calendar provides a preview area that displays a popup calendar for the previous or next calendar views (months). This functionality is available when you set the **AllowPreview** property to **True**.

In Design View:

To preview the next calendar month, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CalendarExtender**.
3. In the **Panel1_C1CalendarExtender Properties** window, set the **AllowPreview** property to **True**.

In Source View:

To set the **AllowPreview** property in source view, click the source tab and add the following code in your source file:

```
<cc1:C1CalendarExtender ID="Panel1_C1CalendarExtender"
runat="server"

        DisplayDate="04/23/2012 16:38:24"

        TargetControlID="Panel1" TitleFormat="MMMM yyyy"
AllowPreview="True"

        NavButtons="None">

</cc1:C1CalendarExtender>
```

This topic illustrates the following:

When the project is loaded, you can preview the next or previous month by hovering over the indicators on either side of the control:

C1Carousel Extender

Use the **C1CarouselExtender** with any items control to turn a flat list of items into an interactive carousel.

C1CarouselExtender Markup

The following markup creates a C1CarouselExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1CarouselExtender ID="Panel1_C1CarouselExtender" runat="server" Display="1"
TargetControlID="Panel1">

</cc1:C1CarouselExtender>
```

Step 3 of 4: Customizing the Carousel

Step 4 of 4: Running the Carousel Project

C1Carousel Extender Tutorial

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > C1Carousel Extender Tutorial

This tutorial demonstrates how to attach the C1CarouselExtender to a **Panel** control containing a list of images.

Step 1 of 4: Creating a Carousel

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > C1Carousel Extender Tutorial > Step 1 of 4: Creating a Carousel

In this topic you will add some list items to a panel which will later become a carousel.

1. In your Web application, add a standard Panel control to the main content of your page.
2. In the Panel, add some images to an unordered list. For example, the XAML might look like the following:

```
<asp:Panel ID="Panel1" runat="server" Width="281px">

<ul class="">

    <li class=""> <a href="http://lorempixel.com/400/200/sports/1">

    </a> </li>

    <li class=""> <a href="http://lorempixel.com/400/200/sports/2">

    </a> </li>

    <li class=""> <a href="http://lorempixel.com/400/200/sports/3">

    </a> </li>

    <li class=""> <a href="http://lorempixel.com/400/200/sports/4">

    </a> </li>

</ul>

</asp:Panel>
```

Add a C1CarouselExtender to the page in the next step.

Step 2 of 4: Adding the C1Carousel Extender to the Page

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > C1Carousel Extender Tutorial > Step 2

of 4: Adding the C1Carousel Extender to the Page

In this step, you will add a C1CarouselExtender control to associate with the **Panel** to create the carousel.

1. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
2. In the **Extender Wizard**, select **C1CarouselExtender** and click **OK**. A C1CarouselExtender control is added to the page and the **TargetControlID** is set to Panel1.

```
<cc1:C1CarouselExtender ID="Panel1_C1CarouselExtender" runat="server" Display="1"
TargetControlID="Panel1">

</cc1:C1CarouselExtender>
```

Now you can begin setting properties for the C1CarouselExtender to format the carousel.

Step 3 of 4: Customizing the Carousel

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > C1Carousel Extender Tutorial > Step 3 of 4: Customizing the Carousel

In this topic you will set some of the properties for the C1CarouselExtender to change the number of images shown in the carousel at one time.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CarouselExtender**.
3. Set the **C1CarouselExtender.Display** property to **2**. In the application, two images will be shown at a time.
4. Set the **C1CarouselExtender.AutoPlay** property to **True**. This will loop through the images automatically.

The markup for the **C1CarouselExtender** will now look like this:

```
<cc1:C1CarouselExtender ID="Panel1_C1CarouselExtender" runat="server" Display="2"
TargetControlID="Panel1" AutoPlay="True">

</cc1:C1CarouselExtender>
```

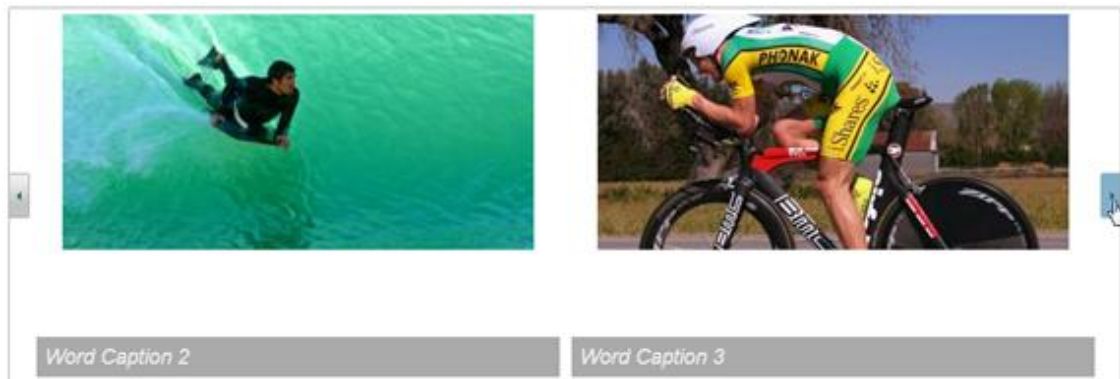

Now run the project to see the carousel of images.

Step 4 of 4: Running the Carousel Project

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > C1Carousel Extender Tutorial > Step 4 of 4: Running the Carousel Project

Press **F5** to run the project and view the following:

- The images advance automatically.
- Only two images appear in the panel at one time.

Setting the Carousel Orientation

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > Setting the Carousel Orientation

The **wijcarousel** widget allows users to set a horizontal or vertical orientation. Simply set the **orientation** option to take advantage of this feature. See the **Carousel > Orientation** page in the ToolkitExplorer sample for details.

Complete the following steps to set the orientation:

1. Create a new ASP.NET application.
2. Navigate to the Toolbox and double-click the standard **Panel** control to add it to the main content of your page. Repeat this step to add a second Panel.
3. Switch to Source view and edit the markup to set the height and width of each panel:

```
<asp:Panel ID="Panel1" runat="server" Height="150" Width="650">
```

```
</asp:Panel>
```

```
<asp:Panel ID="Panel2" runat="server" Width="200" Height="500">
```

```
</asp:Panel>
```

4. Add images to an unordered list within each panel with the following markup:

```
<asp:Panel ID="Panel1" runat="server" Height="150" Width="650">
```

```
<ul class="">
```

```
<li class=""><span>Abstract Image 1</span></li>
```

```
<li class=""><span>Abstract Image 2</span></li>
```

```

        <li class=""><span>Abstract Image 3</span></li>

        <li class=""><span>Abstract Image 4</span></li>

        <li class=""><span>Abstract Image 5</span></li>

        <li class=""><span>Abstract Image 6</span></li>

    </ul>

</asp:Panel>

<asp:Panel ID="Panel2" runat="server" Width="200" Height="500">

    <ul class="">

        <li class=""><span>Abstract Image 1</span></li>

        <li class=""><span>Abstract Image 2</span></li>

        <li class=""><span>Abstract Image 3</span></li>

        <li class=""><span>Abstract Image 4</span></li>

        <li class=""><span>Abstract Image 5</span></li>

        <li class=""><span>Abstract Image 6</span></li>

    </ul>

</asp:Panel>

```

This markup will add content for two carousels to the page. In the next step, you'll add the extenders.

5. In Design view, click the **Panel1** smart tag and select **Add Extender** from the **Panel Tasks** menu.
6. In the **Extender Wizard**, select **C1CarouselExtender** and click **OK**. A C1CarouselExtender control is added to the page and the **TargetControlID** is set to **Panel1**.
7. Edit the C1CarouselExtender's markup to set the **Display** and **Step** properties:

```
<cc1:C1CarouselExtender ID="Panel1_C1CarouselExtender" runat="server" Display="3"
Step="2" TargetControlID="Panel1">
```

8. In **Design** view, click the **Panel2** smart tag and select **Add Extender** from the **Panel Tasks** menu.
9. In the **Extender Wizard**, select **C1CarouselExtender** and click **OK**. A **C1CarouselExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.
10. Edit the C1CarouselExtender's markup to set the **Display**, **Step**, and **Orientation** properties:

```
<cc1:C1CarouselExtender ID="Panel2_C1CarouselExtender" runat="server" Display="3"
Orientation="Vertical" Step="2" TargetControlID="Panel2">
```

The orientation will be set so this carousel will be vertical oriented.

What You've Accomplished

Press **F5** to run the application, and notice that the first carousel will be displayed with the default horizontal orientation, the second will be displayed vertically.

Setting the Carousel Pager Topic

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > Setting the Carousel Pager Topic

You can change the pager style of the **wijcarousel** widget. Simply set the **pagerType** and **pagerPosition** options to take advantage of this feature. See the **Carousel > Paging** page in the ToolkitExplorer sample for details.

Complete the following steps to set the pager type:

1. Create a new ASP.NET application.
2. Navigate to the Toolbox and double-click the standard Panel control to add it to the main content of your page. Repeat this step to add a second Panel.
3. Switch to Source view and edit the markup to add a header for each panel and set the height and width of each panel:

```
<h3>Numbers</h3>
```

```
<asp:Panel ID="Panel1" runat="server" Height="150" Width="200">
```

```
</asp:Panel>
```

```
<h3>Dots</h3>
```

```
<asp:Panel ID="Panel2" runat="server" Height="150" Width="200">
```

```
</asp:Panel>
```

```
<h3>Slider</h3>
```

```
<asp:Panel ID="Panel3" runat="server" Height="150" Width="200">

</asp:Panel>
```

4. Add images to an unordered list within each panel with the following markup:

```
<h3>Numbers</h3>

<asp:Panel ID="Panel1" runat="server" Height="150" Width="200">

<ul class="">

    <li class=""><span>Abstract Image 1</span></li>

    <li class=""><span>Abstract Image 2</span></li>

    <li class=""><span>Abstract Image 3</span></li>

    <li class=""><span>Abstract Image 4</span></li>

    <li class=""><span>Abstract Image 5</span></li>

    <li class=""><span>Abstract Image 6</span></li>

</ul>

</asp:Panel>

<h3>Dots</h3>

<asp:Panel ID="Panel2" runat="server" Height="150" Width="200">

<ul class="">

    <li class=""><span>Abstract Image 1</span></li>

    <li class=""><span>Abstract Image 2</span></li>

    <li class=""><span>Abstract Image 3</span></li>

    <li class=""><span>Abstract Image 4</span></li>
```

```

    <li class=""><span>Abstract Image 5</span></li>

    <li class=""><span>Abstract Image 6</span></li>

</ul>

</asp:Panel>

<h3>Slider</h3>

<asp:Panel ID="Panel3" runat="server" Height="150" Width="200">

<ul class="">

    <li class=""><span>Abstract Image 1</span></li>

    <li class=""><span>Abstract Image 2</span></li>

    <li class=""><span>Abstract Image 3</span></li>

    <li class=""><span>Abstract Image 4</span></li>

    <li class=""><span>Abstract Image 5</span></li>

    <li class=""><span>Abstract Image 6</span></li>

</ul>

</asp:Panel>

```

This markup will add content for three carousels to the page. In the next step, you'll add the extenders.

5. Complete the following steps for each Panel:
 1. In Design view, click the Panel smart tag and select Add Extender from the Panel Tasks menu.
 2. In the Extender Wizard, select C1CarouselExtender and click OK. A C1CarouselExtender control is added to the page and the TargetControlID is set to the Panel.
6. Edit the first C1CarouselExtender's markup to set the ShowPager and PagerType properties:

```
<cc1:C1CarouselExtender ID="Panel1_C1CarouselExtender" runat="server" Display="1"
TargetControlID="Panel1" ShowPager="true"
PagerType="Numbers"> </cc1:C1CarouselExtender>
```

7. Edit the second C1CarouselExtender's markup to set the ShowPager and PagerType properties:

```
<cc1:C1CarouselExtender ID="Panel2_C1CarouselExtender" runat="server" Display="1"
TargetControlID="Panel2" ShowPager="true"
PagerType="Dots"> </cc1:C1CarouselExtender>
```

8. Edit the last C1CarouselExtender's markup to set the ShowPager and PagerType properties:

```
class="NewStyle2"> <cc1:C1CarouselExtender ID="Panel3_C1CarouselExtender" runat="server"
Display="1" TargetControlID="Panel3" ShowPager="true"
PagerType="Slider"> </cc1:C1CarouselExtender>
```

Each of the three carousels will use a different pager style.

What You've Accomplished

Press **F5** to run the application, and notice that each of the three carousels use a different pager style: numbers, dots, and a slider. You can click on each of the pagers to move to another item in the carousel.

Previewing Carousel Content

Wijmo Control Toolkit Extender Controls > C1Carousel Extender > Previewing Carousel Content

The **wijcarousel** widget allows users to preview the previous and next content element. Simply set the **preview** option to take advantage of this feature. See the **Carousel > Preview** page in the ToolkitExplorer sample for details.

Complete the following steps to preview carousel content:

1. Create a new ASP.NET application.
2. Navigate to the Toolbox and double-click the standard **Panel** control to add it to the main content of your page. Repeat this step to add a second Panel.
3. Switch to Source view and edit the markup to set the height and width of each panel:

```
<asp:Panel ID="Panel1" runat="server" Height="150" Width="200">
```

Add images to an unordered list within each panel with the following markup:

```
<h3>Numbers</h3>
```

```
<asp:Panel ID="Panel1" runat="server" Height="150" Width="200">
```

```
<ul class="">
```

```
<li class=""><span>Abstract Image 1</span></li>

<li class=""><span>Abstract Image 2</span></li>

<li class=""><span>Abstract Image 3</span></li>

<li class=""><span>Abstract Image 4</span></li>

<li class=""><span>Abstract Image 5</span></li>

<li class=""><span>Abstract Image 6</span></li>

</ul>

</asp:Panel>
```

This markup will add content for a carousel to the page. In the next step, you'll add the extender.

5. In **Design** view, click the **Panel1** smart tag and select **Add Extender** from the **Panel Tasks** menu.
6. In the **Extender Wizard**, select **C1CarouselExtender** and click **OK**. A **C1CarouselExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.
7. Edit the C1CarouselExtender's markup to set the Preview properties:

```
<cc1:C1CarouselExtender ID="Panel1_C1CarouselExtender" runat="server"
TargetControlID="Panel1" Preview="true">
```

The above markup sets the preview of the carousel.

What You've Accomplished

Press **F5** to run the application, and notice that the previous and next elements in the carousel are previewed in the carousel widget. Press the **Next** or **Previous** buttons to change the current and previewed images.

Chart Extenders

Wijmo Control Toolkit Extender Controls > Chart Extenders

The Wijmo Chart extender controls allow you to create a variety of custom charts, including bar, bubble composite, line, pie, and scatter charts.

C1BarChart Extender

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender

The **C1BarChartExtender** control allows you to turn a table into a customized bar chart.

C1BarChartExtender Markup

The following markup creates a C1BarChartExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1BarChartExtender ID="Panel1_C1BarChartExtender" runat="server"
```

```
    ChartLabelFormatString="" TargetControlID="Panel1">
```

```
<footer compass="South" visible="False">
```

```
</footer>
```

```
<axis>
```

```
    <y compass="West" visible="False">
```

```
        <labels textalign="Center">
```

```
            </labels>
```

```
            <gridmajor visible="True">
```

```
            </gridmajor>
```

```
        </y>
```

```
</axis>
```

</cc1:C1BarChartExtender>

C1BarChart Extender Tutorial

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > C1BarChart Extender Tutorial

This tutorial demonstrates how to attach the C1BarChartExtender to a **Panel** control, add data to the chart, and customize it by setting the extender properties.

See Also

Step 1 of 3: Adding a C1BarChart Extender to the Page

Step 2 of 3: Adding Data to the Chart

Step 3 of 3: Running the Bar Chart Project

Step 1 of 3: Adding a C1BarChart Extender to the Page

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > C1BarChart Extender Tutorial > Step 1 of 3: Adding a C1BarChart Extender to the Page

In this topic you add some content to a **Panel** control and associate a C1BarChartExtender control with it to create a bar chart.

1. In your Web application, add a standard **Panel** control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1BarChartExtender** and click **OK**. A **C1BarChartExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.

```
<cc1:C1BarChartExtender ID="Panel1_C1BarChartExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
    <footer compass="South" visible="False">
```

```
    </footer>
```

```
    <axis>
```

```
    <y compass="West" visible="False">
```

```
        <labels textalign="Center">
```

```
        </labels>
```

```

        <gridmajor visible="True">

        </gridmajor>

    </y>

</axis>

</cc1:C1BarChartExtender>

```

In the next step you will set some of the extender properties.

Step 2 of 3: Adding Data to the Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > C1BarChart Extender Tutorial > Step 2 of 3: Adding Data to the Chart

In this topic you will set some of the properties to add data to the C1BarChartExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
3. Expand the **Header** node and enter **Hardware Distribution** next to the **Text** property.
4. Click the ellipsis button next to the **SeriesList** property. The **ChartSeries Collection Editor** dialog box opens.
 - a. Click Add three times to add three members.
 - b. Select a member and set the following properties for the ChartSeries:

Member	Label	X-String Values	Y-String Values
0	West	Desktops,Notebooks,AIO,Tablets,Phones	5, 3, 4, 7, 2
1	Central	Desktops,Notebooks,AIO,Tablets,Phones	2, 2, 3, 2, 1
2	East	Desktops,Notebooks,AIO,Tablets,Phones	3, 4, 4, 2, 5

- c. Click OK to close the ChartSeries Collection Editor.

Now run the project to see the Bar chart.

Step 3 of 3: Running the Bar Chart Project

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > C1BarChart Extender Tutorial > Step 3 of 3: Running the Bar Chart Project

Press **F5** to run the project and view the bar chart.

Adding Data to Bar Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Adding Data to Bar Chart

Data can be added to the Bar chart by defining a series. Once you add a series you can add the ChartXData and ChartYData. The following values can be added to the ChartXData or ChartYData: DateTimeValue, DoubleValue, and StringValue. In this example you will use string values for the ChartXData and double values for ChartYData.

To add data to the bar chart using the BarChartSeries Collection, complete the following:

1. In your Web application, add a reference to the C1.Web.Wijmo.Extenders.3.dll and then add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the Extender Wizard, select C1BarChartExtender and click OK. A **C1BarChartExtender** control is added to the page and the TargetControlID is set to Panel1.

```
<cc1:C1BarChartExtender ID="Panel1_C1BarChartExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
    <footer compass="South" visible="False">
```

```
    </footer>
```

```
    <axis>
```

```

<y compass="West" visible="False">

    <labels textalign="Center">

</labels>

    <gridmajor visible="True">

</gridmajor>

</y>

</axis>

</cc1:C1BarChartExtender>

```

4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
6. Locate the SeriesList and click on the ellipsis button next to the SeriesList item. The **BarChartSeries Collection Editor** appears.
7. In the **BarChartSeries Collection Editor**, click the **Add** button to add a new **BarChartSeries** to the **BarChart**.
8. Select **Data -> X** from the properties pane in the **BarChartSeries Collection Editor** and click the ellipsis button next to the **Values** property to open the **ChartXData Collection Editor**.
9. Click **Add** seven times to add seven members and enter the following values next to the StringValue property for each member: "Hand Mixer", "Stand Mixer", "Electronic Can Opener", "Toaster", "Blender", "Food Processor" and "Microwave".
10. Click **OK** to save and close the **ChartXData Collection Editor**.
11. Select **Data -> Y** from the properties pane in the **BarChartSeries Collection Editor** and click the ellipsis button next to the **Values** property to open the **ChartYData Collection Editor**.
12. Click **Add** seven times to add seven members and enter the following data next to the **DoubleValues** property: 50, 300, 40, 60, 130, 250, 500.
13. Click **OK** to save and close the **ChartYData Collection Editor**.
14. Set **LegendEntry** to **False** and click **OK** to save and close the **BarChartSeries Collection Editor**.

This topic illustrates the following:

Setting the Axis Bounds

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Setting the Axis Bounds

Use the **Min** and **Max** properties to frame a chart at specific axis values. If the chart has x-axis values ranging from 0 to 100, then setting Min to 0 and Max to 10 will only display the values up to 10.

To set the Max value to 500, complete the following:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
3. Expand **Axis -> X** and set the **Max** property to **500**.

This topic illustrates the following:

Applying Animation to the BarChart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Applying Animation to the BarChart

When the `ChartAnimation.Enabled` property is true you can apply animation effects to the bar chart series. You can enhance your bar chart's appeal by adding transition effects between the sliding or fading animated states to create a seamless flow between these states. Instead of the Bar chart series moving along smoothly from left to right while loading, the bar chart could bounce in as the series slides in and bounce out as the series slides out. By default the `ChartAnimation.Easing` property is set to **EaseLinear** and when you reload the bar chart each series loads with a smooth linear transition effect.

To set the animation effect and animation duration for the bar chart series, complete the following:

1. In your Web application, add a reference to the `C1.Web.Wijmo.Extenders.3.dll` and then add a standard **Panel** control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the Extender Wizard, select **C1BarChartExtender** and click **OK**. A **C1BarChartExtender** control is added to the page and the **TargetControlID** is set to `Panel1`.

```
<cc1:C1BarChartExtender ID="Panel1_C1BarChartExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
        <footer compass="South" visible="False">
```

```
        </footer>
```

```
        <axis>
```

```
            <y compass="West" visible="False">
```

```
                <labels textalign="Center">
```

```
                </labels>
```

```
                <gridmajor visible="True">
```

```
                </gridmajor>
```

```
            </y>
```

```
        </axis>
```

```
</cc1:C1BarChartExtender>
```

4. Select **View | Properties Window** in the Visual Studio menu.

5. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
6. Expand the **Animated** property and enter an animation effect, **EaseInBack**, next to the **Easing** property.
7. Increase the **Duration** value to **1500**.

Changing the Axis Annotation from Format to Currency

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Changing the Axis Annotation from Format to Currency

The value of the format string of annotation can be changed using the **ChartAxis.AnnoFormatString** property. Numeric and time formats can be specified using the format specified by the **NumberFormatInfo** and **DateTimeFormatInfo** classes.

The following tables provide common patterns used in the numeric and time formats.

Numeric Format Options Table

Format Pattern	Description
c, C	Currency format.
d, D	Decimal format.
e, E	Scientific format.
f, F	Fixed point format.
g, G	General format.
n, N	Number format.
p, P	Percent format.

Date Format Options Table

Format Pattern	Description
d, %d	The day of the month. Single-digit days do not have a leading zero.

dd	The day of the month. Single-digit days have a leading zero.
ddd	The abbreviated name of the day of the week.
dddd	The full name of the day of the week.
f, %f	The fraction of a second in single-digit precision.
ff	The fraction of a second in a double-digit precision.
fff	The fraction of a second in three-digit precision.
ffff	The fraction of a second in a four-digit precision.
H	Displays the hour for the specified DateTime object in the range 1-12.
m	Displays the minute for the specified DateTime object in the range 0-59.

To set the **AnnoFormatString** property to currency, complete the following:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
3. Expand **the Axis->Y** node and enter 'c' for the **AnnoFormatString** property.

Rotating the Axis Annotation

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Rotating the Axis Annotation

BarChart.Axis.Y.Labels.AxisLabelStyle.Rotation property like the following:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
3. Expand the **Axis ->Y ->Labels->Style** and set the **Rotation** property to 60.

This topic illustrates the following:

Decreasing Bar Width Spacing

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Decreasing Bar Width Spacing

The **ClusterWidth** property determines the spacing between the bars. The default value is 85.

To decrease the BarChart width spacing, complete the following:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
3. Locate the **ClusterWidth** property and set it to **70**.

Styling the Axis Labels

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Styling the Axis Labels

To modify the X-Axis and Y-axis label color and font size complete the following:

Select **View | Properties Window** in the Visual Studio menu.

1. Click the drop-down list at the top of the Properties window and select **Panel1_C1BarChartExtender**.
2. In the C1BarChart properties window expand Axis->X->Labels->AxisLabelStyle and set FontSize to 11.
3. In the C1BarChart properties window expand Axis->Y->Labels->AxisLabelStyle and set FontSize to 11.
4. In the C1BarChart properties window expand Axis->Y and set Text to Price.
5. In the C1BarChart properties window expand Axis->Y->TextStyle->Fill and set Color to Black.
6. In the C1BarChart properties window expand Axis->Y->TextStyle and set FontSize to 11.
7. In the C1BarChart properties window expand Axis->X->TextStyle and set FontSize to 11.

8. In the C1BarChart properties window expand Axis->X and set Text to Kitchen Electronics.
9. In the C1BarChart properties window expand Axis->X->TextStyle->Fill and set color to Black.

This topic illustrates the following:

The following image shows the Y-Axis label's font size and forecolor modified. The font size was modified using the **FontSize** property and the forecolor was modified using the **Fill** property.

Setting the ClusterOverlap

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Setting the ClusterOverlap

Use the **C1BarChart.ClusterOverlap** property to set the amount that bars overlap each other in a cluster. The value represents the percentage of bar overlap, with valid values between 0 and 100. The following figure illustrates a bar chart with a **C1BarChart.ClusterOverlap** of 50 percent:

Setting the Cluster Width

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Setting the Cluster Width

Use the **C1BarChart.ClusterWidth** property to set the space used by each bar cluster. The value represents the percentage of available space, with valid values between 0 and 100.

ClusterWidth = 50%

ClusterWidth = 90%

ClusterWidth = 90%

Setting the Cluster Spacing

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BarChart Extender > Setting the Cluster Spacing

Use the **C1BarChart.ClusterSpacing** property to indicate the spacing between the adjacent bars. The following Bar chart shows the **C1BarChart.ClusterSpacing** property set to 10.

C1BubbleChart Extender

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender

The C1BubbleChartExtender control allows the user to show customized bubble charts.

C1BubbleChartExtender Markup

The following markup creates a C1BubbleChartExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1BubbleChartExtender ID="Panel1_C1BubbleChartExtender" runat="server"
    TargetControlID="Panel1">
    <animation duration="2000" easing="EaseOutElastic">
    </animation>
    <footer compass="South" visible="False">
    </footer>
    <axis>
        <y compass="West" visible="False">
            <labels textalign="Center">
            </labels>
            <gridmajor visible="True">
            </gridmajor>
        </y>
    </axis>
</cc1:C1BubbleChartExtender>
```

C1BubbleChartExtender Tutorial

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender >

C1BubbleChartExtender Tutorial

This tutorial demonstrates how to attach the C1BubbleChartExtender to a **Panel** control, add data to the chart, and customize it by setting the extender properties.

Step 1 of 3: Adding a C1BubbleChartExtender to the Page

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender >
C1BubbleChartExtender Tutorial > Step 1 of 3: Adding a C1BubbleChartExtender to the Page

In this topic you add some content to a **Panel** control and associate a C1BubbleChartExtender control with it to create a bubble chart.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select Add Extender from the Panel Tasks menu.
3. In the Extender Wizard, select C1BubbleChartExtender and click OK. A C1BubbleChartExtender control is added to the page and the TargetControlID is set to Panel1.

```
<cc1:C1BubbleChartExtender ID="Panel1_C1BubbleChartExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
        <animation duration="2000" easing="EaseOutElastic">
```

```
        </animation>
```

```
        <footer compass="South" visible="False">
```

```
        </footer>
```

```
        <axis>
```

```
            <y compass="West" visible="False">
```

```
                <labels textalign="Center">
```

```
                </labels>
```

```

        <gridmajor visible="True">

        </gridmajor>

    </y>

</axis>

</cc1:C1BubbleChartExtender>

```

In the next step you will set some of the extender properties.

Step 2 of 3: Adding Data to the Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender >
 C1BubbleChartExtender Tutorial > Step 2 of 3: Adding Data to the Chart

In this topic you will set some of the properties to add data to the C1BubbleChartExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BubbleChartExtender**.
3. Expand the **Header** node and enter **Sales** next to the **Text** property.
4. Click the ellipsis button next to the **SeriesList** property. The **ChartSeries Collection Editor** dialog box opens.
 - a. Click **Add** to add a new member.
 - b. Expand the **Data** node and enter the following values next to **DoubleValues**.

Axis	Values
X	5, 14, 20, 18, 22
Y	5500, 12200, 60000, 24400, 32000
Y1	3, 12, 33, 10, 42

- c. Click **OK** to close the **BubbleChartSeries Collection Editor**.

Now run the project to see the bubble chart.

Step 3 of 3: Running the Bubble Chart Project

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender > C1BubbleChartExtender Tutorial > Step 3 of 3: Running the Bubble Chart Project

Press **F5** to run the project and view the bubble chart.

Creating Negative X and Y BubbleChartSeries Values

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender > Creating Negative X and Y BubbleChartSeries Values

To create negative X and Y values for the BubbleChartSeries, set the X and Y Origin to zero so that it displays the negative values on the left side of the axis and only the positive values on the right side of the axis.

This topic illustrates how to display negative X and Y BubbleChartSeries values on the C1BubbleChart in **Design View** and **Source View**.

Creating Negative X and Y values for your C1BubbleChart in Design View:

1. Select **View | Properties** Window in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BubbleChartExtender**.
3. Click the ellipsis button next to the **SeriesList** property. The **BubbleChartSeries Collection Editor** appears.
4. In the BubbleChartSeries Collection Editor, click the **Add** button once to add a new BubbleChartSeries to the BubbleChart.
5. Select the member and set the following properties for the BubbleChartSeries. Use the DoubleValue for each ChartXData, ChartYData, and Y1 values.

Member	Label	ChartXData	ChartYData	Y1Data
0	West	-5, 14, 20, 18, 22	-5500	3, 12, 33, 10, 42

6. Click **OK** to close and save the collection editor.
7. In the BubbleChart properties window expand the **Axis->X** node and set the **Origin** property to **0**.
8. Expand the **Axis->Y** node and set the **Origin** property to **0**.

Creating Negative X and Y values in Source View:

To create negative X and Y values for your **C1BubbleChart**, click the source tab and add the following code in your source file:

```
<cc1:C1BubbleChartExtender ID="Panel1_C1BubbleChartExtender" runat="server"
    TargetControlID="Panel1">
    <Animation Duration="500" Easing="EaseOutElastic">
    </Animation>
    <SeriesList>
        <cc1:BubbleChartSeries Label="West" LegendEntry="True">
            <Data>
                <Y1 DoubleValues="3, 12, 33, 10, 42" />
                <X>
                    <Values>
                        <cc1:ChartXData DoubleValue="-5" />
                        <cc1:ChartXData DoubleValue="14" />
                        <cc1:ChartXData DoubleValue="20" />
                        <cc1:ChartXData DoubleValue="18" />
                        <cc1:ChartXData DoubleValue="22" />
                    </Values>
                </X>
            </Data>
        </cc1:BubbleChartSeries>
    </SeriesList>
</cc1:C1BubbleChartExtender>
```

```

        <Y>

        <Values>

            <cc1:ChartYData DoubleValue="-5500" />

            <cc1:ChartYData DoubleValue="12200" />

            <cc1:ChartYData DoubleValue="60000" />

            <cc1:ChartYData DoubleValue="24400" />

            <cc1:ChartYData DoubleValue="32000" />

        </Values>

    </Y>

</Data>

</cc1:BubbleChartSeries>

</SeriesList>

<Footer Compass="South" Visible="False">

</Footer>

<Axis>

    <X Origin="0">

    </X>

    <Y Compass="West" Visible="False">

        <Labels TextAlign="Center">

        </Labels>

        <GridMajor Visible="True">

        </GridMajor>

    </Y>

</Axis>

</cc1:C1BubbleChartExtender>

```

This Topic Illustrates the Following:

The following image shows a **C1BubbleChart** with negative X and Y values:

Creating Diamond Markers

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender > Creating Diamond Markers

To create diamond markers instead of bubbles, use the SeriesList's Markers property to define the type of marker used. You can choose from **Circle**, **Tri**, **InvertedTri**, **Box**, **Diamond** or **Cross**.

This topic illustrates how to change marker type in **Design** view and in **Source** view.

Changing the Marker Type in Design View:

To change the marker type of your C1BubbleChart, follow these steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1BubbleChartExtender**.
3. Click the ellipsis button next to the **SeriesList** property. The **BubbleChartSeries Collection Editor** appears.
4. Select the series from the Members list that you wish to change its marker type. In this example we'll select the first series from the Members list.
5. Select the dropdown arrow next to the **Type** and then choose **Diamond**.
6. Click **OK**.

The **Diamond** marker type is applied to the first bubble chart series.

Changing the Marker Type in Source View

To change the marker type for the first series in Source view, add `<Markers Type="Diamond"></Markers>` tag so that the tag resembles the following:

```
<cc1:C1BubbleChartExtender ID="Panel1_C1BubbleChartExtender" runat="server">
```

```

Height="300" TargetControlID="Panel1" Width="400">

<Animation Duration="500" Easing="EaseOutElastic">

</Animation>

<SeriesList>

  <cc1:BubbleChartSeries Label="West" LegendEntry="True">

    <Data>

      <Y1 DoubleValues="3, 12, 33, 10, 42" />

      <X>

        <Values>

          <cc1:ChartXData DoubleValue="-5" />

          <cc1:ChartXData DoubleValue="14" />

          <cc1:ChartXData DoubleValue="20" />

          <cc1:ChartXData DoubleValue="18" />

          <cc1:ChartXData DoubleValue="22" />

        </Values>

      </X>

      <Y>

        <Values>

          <cc1:ChartYData DoubleValue="-5500" />

          <cc1:ChartYData DoubleValue="12200" />

          <cc1:ChartYData DoubleValue="60000" />

          <cc1:ChartYData DoubleValue="24400" />

          <cc1:ChartYData DoubleValue="32000" />

        </Values>

      </Y>

    </Data>
  
```

```
<Markers Type="Diamond">

</Markers>

</cc1:BubbleChartSeries>

</SeriesList>

<Footer Compass="South" Visible="False">

</Footer>

<Axis>

  <X Origin="0">

  </X>

  <Y Compass="West" Visible="False">

    <Labels TextAlign="Center">

    </Labels>

    <GridMajor Visible="True">

    </GridMajor>

  </Y>

</Axis>

</cc1:C1BubbleChartExtender>
```

This Topic Illustrates the Following:

The following image shows a **C1BubbleChart** with the first **BubbleChartSeries** having a diamond marker type:

Hiding Specific Chart Labels

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender > Hiding Specific Chart Labels

You can use the **BubbleChartSeries.InvisibleMarkLabels** property to hide the automatic chart labels that appear inside the data marker (bubble). To hide the first and fourth data maker labels, complete the following:

Select **View | Properties Window** in the Visual Studio menu.

1. Click the drop-down list at the top of the Properties window and select **Panel1_C1BubbleChartExtender**.
2. Click on the ellipsis button next to the **SeriesList** property.

The **BubbleChartSeries Collection Editor** appears.

3. Click on the ellipsis button next to the **InvisibleMarkLabels** property.

The **Int32 Collection Editor** appears.

4. Click **Add** to add a new member and enter 1 for the Value. This will make the first set of data points in the BubbleChartSeries invisible.
5. Click **Add** to add another member and enter 4 for the Value. This will make the fourth set of data points in the BubbleChartSeries invisible.
6. Click **OK** to save and close the editor.
7. Run your project and observe that the chart label values are invisible for the first set of data points and fourth set of data points.

Specifying Invisible Mark Labels in Source View

To hide the automatic chart labels that appear inside the data marker (bubble) use the `BubbleChartSeries.InvisibleMarkLabels` like the following:

```
<cc1:C1BubbleChartExtender ID="Panel1_C1BubbleChartExtender" runat="server"
```

```
    Height="300" TargetControlID="Panel1" Width="400">
```

```
        <Animation Duration="500" Easing="EaseOutElastic">
```

```
        </Animation>
```

```
        <SeriesList>
```

```
            <cc1:BubbleChartSeries Label="West" LegendEntry="True"
```

```
                InvisibleMarkLabels="1, 4">
```

```
            <Data>
```

```
                <Y1 DoubleValues="3, 12, 33, 10, 42" />
```

```
            <X>
```

```
                <Values>
```

```
                    <cc1:ChartXData DoubleValue="5" />
```

```
                    <cc1:ChartXData DoubleValue="14" />
```

```
                    <cc1:ChartXData DoubleValue="20" />
```

```
                    <cc1:ChartXData DoubleValue="18" />
```

```

        <cc1:ChartXData DoubleValue="22" />

    </Values>

</X>

<Y>

    <Values>

        <cc1:ChartYData DoubleValue="5500" />

        <cc1:ChartYData DoubleValue="12200" />

        <cc1:ChartYData DoubleValue="60000" />

        <cc1:ChartYData DoubleValue="24400" />

        <cc1:ChartYData DoubleValue="32000" />

    </Values>

</Y>

</Data>

<Markers Type="Circle">

</Markers>

</cc1:BubbleChartSeries>

</SeriesList>

<Footer Compass="South" Visible="False">

</Footer>

<Axis>

    <Y Compass="West" Visible="False">

        <Labels TextAlign="Center">

</Labels>

        <GridMajor Visible="True">

    </Y>

```

```
</Axis>
```

```
</cc1:C1BubbleChartExtender>
```

Positioning Chart Labels

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1BubbleChart Extender > Positioning Chart Labels

You can use the **BubbleChartLabel.Position** property to specify where to position the chart labels: outside or inside and the **BubbleChartLabel.Compass** property to indicate which side to show the bubble's label: north, south, east, or west. To set the bubble chart label outside the bubble and to the north of the bubble, complete the following:

Changing the Chart Label's Position and Compass in Design View:

To change the chart label's position and compass, follow these steps:

1. Select View | Properties Window in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select Panel1_C1BubbleChartExtender.
3. Expand the ChartLabel node in the BubbleChart properties window.
4. Click on the dropdown arrow next to Position and select Outside.
5. Click on the dropdown arrow next to Compass and select North.

Changing the Chart Label's Position and Compass in Source View:

To change the marker type for the first series in Source view, set the **Position** and **Compass** properties inside the **ChartLabel** tag so that the tag resembles the following:

```
<ChartLabel Position="Outside" Compass="North"> </ChartLabel>
```

This Topic Illustrates the Following:

The following image shows a **C1BubbleChart** with the labels positioned on the outside right above the bubbles:

C1CompositeChartExtender

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender

The C1CompositeChartExtender control allows you to draw multiple types of charts in one canvas simultaneously.

C1CompositeChartExtender Markup

The following markup creates a C1CompositeChartExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1CompositeChartExtender ID="Panel1_C1CompositeChartExtender"
```

```
runat="server" TargetControlID="Panel1">

<Footer Compass="South" Visible="False">

</Footer>

<Axis>

  <Y Compass="West" Visible="False">

    <Labels TextAlign="Center">

</Labels>

    <GridMajor Visible="True">

</GridMajor>

  </Y>

</Axis>

</cc1:C1CompositeChartExtender>
```

C1Composite Chart Extender Tutorial

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender > C1Composite Chart Extender Tutorial

This tutorial demonstrates how to attach the C1CompositeChartExtender to a **Panel** control, add data to the chart, and customize it by setting the extender properties.

See Also

Step 1 of 3: Adding C1Composite Chart Extender to the Page

Step 2 of 3: Adding Data to Composite Chart

Step 3 of 3: Running the Composite Chart Project

Step 1 of 3: Adding C1Composite Chart Extender to the Page

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender > C1Composite Chart Extender Tutorial > Step 1 of 3: Adding C1Composite Chart Extender to the Page

In this topic you add some content to a **Panel** control and associate a C1CompositeChartExtender control with it to create a composite chart.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select Add Extender from the Panel Tasks menu and set its Height to 400px:

```
<asp:Panel ID="Panel1" runat="server" Height="400px">

    </asp:Panel>
```

3. In the Extender Wizard, select **C1CompositeChartExtender** and click **OK**. A **C1CompositeChartExtender** control is added to the page and the **TargetControlID** is set to Panel1.

```
<cc1:C1CompositeChartExtender ID="Panel1_C1CompositeChartExtender"

    runat="server" TargetControlID="Panel1">

    <Footer Compass="South" Visible="False">

    </Footer>

    <Axis>

        <Y Compass="West" Visible="False">

            <Labels TextAlign="Center">

            </Labels>

            <GridMajor Visible="True">

            </GridMajor>

        </Y>

    </Axis>

</cc1:C1CompositeChartExtender>
```

In the next step you will set some of the extender properties.

Step 2 of 3: Adding Data to Composite Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender > C1Composite Chart Extender Tutorial > Step 2 of 3: Adding Data to Composite Chart

In this topic you will set some of the properties to add data to the C1CompositeChartExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1CompositeChartExtender**.
3. Expand the **Header** node and enter **Hardware Distribution** next to the **Text** property.
4. Click the ellipsis button next to the **SeriesList** property. The **CompositeChartSeries Collection Editor** dialog box opens.
 - a. Click **Add** five times to add five new members.
 - b. Expand the **Data** node the first four members and enter the following values:

Member	Property	Value
0	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	50, 30, 40, 70, 20
	Label	West
1	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	20, 20, 30, 20, 10
	Label	South
2	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	30, 40, 40, 20, 50
	Label	East
3	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	30, 60, 20, 90, 50
	Label	North

- c. For Member 4 (the fifth member), click the ellipsis button next to the **PieSeriesList** option. We will use this to create a pie chart.
- d. Set the **Type** property to **Pie**.
- e. Click **Add** three times to add three new members in the **PieChartSeries Collection Editor**.
- f. Enter the following values for each property:

Member	Data Property	Label Property	Offset Property
0	46.78	MacBook Pro	15
1	23.18	iMac	0
2	20.25	MacBook	0

- g. Click **OK** to close the **PieChartSeries Collection Editor**.
- h. Click **OK** to close the **CompositeChartSeries Collection Editor**.

Now run the project to see the Composite chart.

Step 3 of 3: Running the Composite Chart Project

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender > C1Composite Chart Extender Tutorial > Step 3 of 3: Running the Composite Chart Project

Press **F5** to run the project and view the composite chart. Notice there are three types of charts on one page.

Adding Data to the CompositeChart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender > Adding Data to the CompositeChart

Data can be added to the Composite chart by defining a series. Once you add a series you can add the ChartXData and ChartYData. The following values can be added to the ChartXData or ChartYData: DateTimeValue, DoubleValue, and StringValue.

To add data to the bar chart using the **CompositeChartSeries** Collection, complete the following:

1. In your Web application, add a reference to the C1.Web.Wijmo.Extenders.3.dll and then add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1CompositeChartExtender** and click **OK**. A CompositeChartExtender control is added to the page and the TargetControlID is set to Panel1.

```
<cc1:C1CompositeChartExtender ID="Panel1_C1CompositeChartExtender"
    runat="server" TargetControlID="Panel1">

    <Footer Compass="South" Visible="False">

    </Footer>

    <Axis>

        <Y Compass="West" Visible="False">

            <Labels TextAlign="Center">

            </Labels>

            <GridMajor Visible="True">

            </GridMajor>

        </Y>

    </Axis>

</cc1:C1CompositeChartExtender>
```

4. Click the Design tab to navigate to Design view.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **Panel1_C1CompositeChartExtender**.
7. Select the ellipsis button next to the **SeriesList** property. The **CompositeChartSeries Collection Editor** dialog box opens.

8. Click **Add** five time to add five new members.
9. Expand the **Data** node for the first four members and enter the following values:

Member	Property	Value
0	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	50, 30, 40, 70, 20
	Label	West
1	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	20, 20, 30, 20, 10
	Label	South
2	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	30, 40, 40, 20, 50
	Label	East
3	Data.X.StringValues	Desktops,Notebooks,AIO,Tablets,Phones
	Data.Y.DoubleValues	30, 60, 20, 90, 50
	Label	North

10. For Member 4 (the fifth member), click the ellipsis button next to the **PieSeriesList** option. We will use this to create a Pie chart.
11. Select Member 4 and set the **Type** property to Pie.
12. Click **Add** three times to add three new members in the **PieChartSeries Collection Editor**.

Enter the following values for each property:

Member	Data Property	Label Property	Offset Property
--------	---------------	----------------	-----------------

0	46.78	MacBook Pro	15
1	23.18	iMac	0
2	20.25	MacBook	0

13. Click **OK** to close the **PieChartSeries Collection Editor**.
14. Click **OK** to close the **CompositeChartSeries Collection Editor**.
15. Run the project to see the multiple chart types on the composite chart.

Adding Data to the Composite Chart in Source View:

To add data to a Bar chart and Pie chart in the Composite chart, click the source tab and add the following code in your source file:

```
<cc1:C1CompositeChartExtender ID="Panel1_C1CompositeChartExtender"
    runat="server" Height="300" TargetControlID="Panel1" Width="450">

    <SeriesList>

        <cc1:CompositeChartSeries Label="West" LegendEntry="True" Type="Column">

            <Data>

                <X>

                    <Values>

                        <cc1:ChartXData StringValue="Desktops" />

                        <cc1:ChartXData StringValue="Notebooks" />

                        <cc1:ChartXData StringValue="AIO" />

                        <cc1:ChartXData StringValue="Tablets" />

                        <cc1:ChartXData StringValue="Phones" />

                    </Values>

                </X>

                <Y>

```

This Topic Illustrates the Following:

The following image shows a **C1CompositeChart** with two chart types added, Bar and Pie:

Applying Animation to the CompositeChart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender > Applying Animation to the CompositeChart

When the `ChartAnimation.Enabled` property is true you can apply animation effects to the bar chart series. You can enhance your bar chart's appeal by adding transition effects between the sliding or fading animated states to create a seamless flow between these states. Instead of the composite chart series moving along smoothly from left to right while loading, the composite chart could bounce in as the series slides in and bounce out as the series slides out. By default the **ChartAnimation.Easing** property is set to **EaseLinear** and when you reload the chart each series loads with a smooth linear transition effect.

To set the animation effect and animation duration for the composite chart series, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the Panel Tasks menu.
3. In the Extender Wizard, select **C1CompositeChartExtender** and click **OK**. A `CompositeChartExtender` control is added to the page and the **TargetControlID** is set to **Panel1**.
4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select `Panel1_C1CompositeChartExtender`.
6. Expand the **Animated** node and enter an animation effect, **EaseInBack**, next to the **Easing** property.
7. Increase the **Duration** value to **1500**.

Creating a Scatter Plot Type in the CompositeChart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1CompositeChartExtender > Creating a

Scatter Plot Type in the CompositeChart

To create a Scatter plot type in the composite chart, complete the following:

1. In your Web application, add a reference to the C1.Web.Wijmo.Extenders.3.dll and then add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select Add Extender from the Panel Tasks menu.
3. In the Extender Wizard, select C1CompositeChartExtender and click OK. A CompositeChartExtender control is added to the page and the TargetControlID is set to Panel1.
4. Select View | Properties Window in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select Panel1_C1CompositeChartExtender.
6. Select the ellipsis button next to the SeriesList property. The CompositeChartSeries Collection Editor dialog box opens.
7. Click Add two times to add two new members.
8. Expand the Data node for the first two members and enter the following values:

Member	Property	Value
0	ChartXData.DoubleValues	0, 1, 2, 3, 4, 5
	ChartYData.DoubleValues	1, 1.5, 2.8, 3.5, 3.9, 4.2
	Label	Observations
	Type	Scatter
1	ChartXData.DoubleValues	0, 5
	ChartYData.DoubleValues	1.11, 4.51
	Label	Regression Line
	Type	Line

9. Click OK to save and close the CompositeChartSeries Collection Editor.
10. Expand the Axis->X and set the Max property to 6 and the Min property to -5.
11. Run the project to see the multiple chart types on the composite chart.

Adding Data to the Composite Chart in Source View:

To add data to a Scatter chart and Line chart in the Composite chart, click the source tab and add the following code in your source file:

```
<cc1:C1CompositeChartExtender ID="Panel1_C1CompositeChartExtender"
```

```

runat="server" Height="300" TargetControlID="Panel1" Width="450">

<SeriesList>

  <cc1:CompositeChartSeries Label="Observations" LegendEntry="True"

    Type="Scatter">

      <Data>

        <X>

          <Values>

            <cc1:ChartXData DoubleValue="0" />

            <cc1:ChartXData DoubleValue="1" />

            <cc1:ChartXData DoubleValue="2" />

            <cc1:ChartXData DoubleValue="3" />

            <cc1:ChartXData DoubleValue="4" />

            <cc1:ChartXData DoubleValue="5" />

          </Values>

        </X>

        <Y>

          <Values>

            <cc1:ChartYData DoubleValue="1" />

            <cc1:ChartYData DoubleValue="1.5" />

            <cc1:ChartYData DoubleValue="2.8" />

</cc1:C1CompositeChartExtender>

```

This Topic Illustrates the Following:

The following image shows a **C1CompositeChart** with two chart types added, Scatter and Line:

C1LineChartExtender

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender

The **C1LineChartExtender** control allows the user to show customized linear charts. A line chart draws each series as connected points of data.

C1LineChartExtender Markup

The following markup creates a C1LineChartExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1LineChartExtender ID="Panel1_C1LineChartExtender" runat="server"
```

```
    ChartLabelFormatString="" TargetControlID="Panel1">
```

```
    <footer compass="South" visible="False">
```

```
</footer>
```

```
<legend>
```

```
    <size height="3" width="30">
```

```
    </size>
```

```
</legend>
```

```
<axis>
```

```
    <y compass="West" visible="False">
```

```
        <labels textalign="Center">
```

```
        </labels>
```

```
        <gridmajor visible="True">
```

```
        </gridmajor>
```

```
    </y>
```

```
</axis>
```

```
</cc1:C1LineChartExtender>
```

C1LineChartExtender Tutorial

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > C1LineChartExtender Tutorial

This tutorial demonstrates how to attach the C1LineChartExtender to a Panel control, add data to the chart, and customize it by setting the extender properties.

See Also

Step 1 of 3: Adding a C1LineChartExtender to the Page

Step 2 of 3: Adding Data to the LineChart

Step 3 of 3: Running the Project

Step 1 of 3: Adding a C1LineChartExtender to the Page

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > C1LineChartExtender Tutorial > Step 1 of 3: Adding a C1LineChartExtender to the Page

In this topic you add some content to a **Panel** control and associate a C1LineChartExtender control with it to create a line chart.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select Add **Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1LineChartExtender** and click **OK**. A **C1LineChartExtender** control is added to the page and the **TargetControlID** is set to Panel1.

```
<cc1:C1LineChartExtender ID="Panel1_C1LineChartExtender" runat="server"
```

```
ChartLabelFormatString="" TargetControlID="Panel1">
```

```
<Footer Compass="South" Visible="False">
```

```
</Footer>
```

```
<Legend>
```

```
<Size Height="3" Width="30">
```

```
</Size>
```

```
</Legend>
```

```

<Axis>

  <Y Compass="West" Visible="False">

    <Labels TextAlign="Center">

      </Labels>

    <GridMajor Visible="True">

      </GridMajor>

    </Y>

  </Axis>

</cc1:C1LineChartExtender>

```

In the next step you will set some of the extender properties.

Step 2 of 3: Adding Data to the LineChart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > C1LineChartExtender Tutorial > Step 2 of 3: Adding Data to the LineChart

In this topic you will set some of the properties to add data to the C1LineChartExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1LineChartExtender**.
3. Expand the **Header** node and enter **World of Warcraft Players by Region** next to the **Text** property.
4. Click the ellipsis button next to the **SeriesList** property. The **ChartSeries Collection Editor** dialog box opens.
 - a. Click **Add** three times to add three members.
 - b. Select a member and set the following properties for the **ChartSeries**:

Member	Label	Markers-Visible	Data-X-DateTimeValues	Data-Y-DoubleValues
0	North	True	2005-07-01, 2005-08-01, 2005-	1000000, 1000000,

	America		10-01, 2005-12-01, 2006-03-01, 2006-12-01, 2008-01-01	1100000, 1400000, 1700000, 2000000, 2500000
1	Europe	True	2005-07-01, 2005-08-01, 2005-10-01, 2005-12-01, 2006-03-01, 2006-07-01, 2006-12-01, 2008-01-01	1000000, 1000000, 900000, 1000000, 1000000, 1000000, 1500000, 2000000
2	Asia	True	2005-07-01, 2005-08-01, 2005-10-01, 2005-12-01, 2006-03-01, 2006-07-01, 2006-12-01, 2008-01-01	1500000, 2000000, 2400000, 3700000, 4000000, 4500000, 5500000

- c. Click **OK** to close the **ChartSeries Collection Editor**.
5. Click the ellipsis button next to the **SeriesStyles** property. The **ChartStyle Collection Editor** dialog box opens.
 - a. Click **Add** three times to add three members.
 - b. Select a member and set the following properties for the **ChartStyle**. Note that you can use whatever colors you prefer.

Member	Stroke	Stroke Width	Opacity
0	#AFE500	5	15
1	#959595	5	0
2	#2d2d2d	5	0

Now run the project to see the LineChart.

Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > C1LineChartExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the line chart.

Adding Data to the Line Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > Adding Data to the Line Chart

Data can be added to the **Line** chart by defining a series. Once you add a series you can add the **ChartXData** and **ChartYData**. The following values can be added to the **ChartXData** or **ChartYData**: **DateTimeValue**, **DoubleValue**, and **StringValue**. In this example you will use string values for the **ChartXData** and double values for ChartYData.

To add data to the bar chart using the BarChartSeries Collection, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard **Panel** control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1LineChartExtender** and click **OK**. A C1LineChartExtender control is added to the page and the TargetControlID is set to Panel1.

```
<cc1:C1LineChartExtender ID="Panel1_C1LineChartExtender" runat="server"
```

```
TargetControlID="Panel1">
```

```
<SeriesTransition Duration="2000">
```

```
</SeriesTransition>
```

```
<Animation Duration="2000">
```

```
</Animation>
```

```
<Footer Compass="South" Visible="False">
```

```
</Footer>
```

```

<Legend>

    <Size Height="3" Width="30">

        </Size>

</Legend>

<Axis>

    <Y Compass="West" Visible="False">

        <Labels TextAlign="Center">

            </Labels>

            <GridMajor Visible="True">

                </GridMajor>

            </Y>

        </Axis>

    </cc1:C1LineChartExtender>

```

4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1LineChartExtender**.
6. Locate the **SeriesList** and click on the **ellipsis** button next to the **SeriesList** item.

The **LineChartSeries Collection Editor** appears.

7. In the **LineChartSeries Collection Editor**, click the Add button to add a new LineChartSeries to the LineChart.
8. Set the **Label** property to #Wijmo for the LineChartSeries.
9. Select **Data -> X** from the properties pane in the **LineChartSeries Collection Editor** and click the ellipsis button next to the **Values** property to open the **ChartXData Collection Editor**.
10. Click Add nine times to add nine members and enter the following values next to the **DateTimeValue** property for each member: "2011-04-10", "2011-04-11", "2011-04-12", "2011-04-13", "2011-04-14", "2011-04-15", "2011-04-16", "2011-04-17", and "2011-04-18".
11. Click **OK** to save and close the **ChartXData Collection Editor**.
12. Select **Data -> Y** from the properties pane in the **LineChartSeries Collection Editor** and click the ellipsis button next to the **Values** property to open the **ChartYData Collection Editor**.
13. Click Add nine times to add nine members and enter the following data next to the **DoubleValue** property: 12, 30, 6, 22, 14, 25, 41, 14, and 3.14. Click **OK** to save and close the **ChartYData Collection Editor**.

Adding Data to the Line Chart in Source View:

To add data to the LineChart, click the source tab and add the following code in your source file:

```
<cc1:C1LineChartExtender ID="Panel1_C1LineChartExtender" runat="server"
    Height="300" TargetControlID="Panel1" Width="400">
    <SeriesTransition Duration="2000">
        </SeriesTransition>
        <Animation Duration="2000">
            </Animation>
        <SeriesList>
            <cc1:LineChartSeries Label="#Wijmo" LegendEntry="True">
                <Data>
                    <X>
                        <Values>
                            <cc1:ChartXData DateTimeValue="2011-04-10" />

```

This topic illustrates the following:

Adding Symbols to the LineChartSeries

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > Adding Symbols to the LineChartSeries

To add symbols to two of the data points in the LineChartSeries, complete the following:

1. Select View | Properties Window in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select Panel1_C1LineChartExtender.
3. Locate the SeriesList and click on the ellipsis button next to the SeriesList item. The **LineChartSeries Collection Editor** appears.
4. Expand the Markers node and click on the ellipsis button next to Symbols. The LineChartMarkerSymbol Collection Editor appears.
5. Click the Add button twice to add two symbols.
6. Select the first member and set its Index property to 6 and Url property to "Images/wijmo.png".
7. Select the second member and set its Index property to 2 and Url property to "Images/hatemo.png".
8. Click OK to save and close the changes made in the LineChartMarkerSymbol Collection Editor.

Adding Symbols to the Line Chart in Source View:

To add symbols the LineChart, click the source tab and add the following code in your source file:

```
<cc1:C1LineChartExtender ID="Panel1_C1LineChartExtender" runat="server"
    Height="300" TargetControlID="Panel1" Width="400">
    </Animation>
    <SeriesList>
        <cc1:LineChartSeries Label="#Wijmo" LegendEntry="True">
            <Markers>
                <Symbol>
                    <cc1:LineChartMarkerSymbol Index="6" Url="Images/wijmo.png" />
                    <cc1:LineChartMarkerSymbol Index="2" Url="Images/hatemo.png" />
                </Symbol>
            </Markers>
        </cc1:LineChartSeries>
    </SeriesList>
    <Footer Compass="South" Visible="False">
    </Footer>
    <Legend>
        <Size Height="3" Width="30">
        </Size>
    </Legend>
    <Axis>
        <Y Compass="West" Visible="False">
            <Labels TextAlign="Center">
            </Labels>
```

```
<GridMajor Visible="True">  
  
</GridMajor>

</Axis>  
  
</cc1:C1LineChartExtender>
```

Styling the Lines in LineChartSeries

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > Styling the Lines in LineChartSeries

To style the lines in the **LineChartSeries**, complete the following:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1LineChartExtender**.
3. Locate the **SeriesStyles** and click on the ellipsis button next to the **SeriesStyles** property.

The **ChartStyle Collection Editor** appears.

4. Click the **Add** button once to add one new member.
5. Set the **Stroke** to "#00a6dd", **StrokeWidth** to "5", and **Opacity** to "0.8"
6. Click **OK** to save and close the **ChartStyle Collection Editor**.

Styling the Line in the LineChartSeries in Source View:

To style the line in the LineChartSeries, click the source tab and add the following code in your source file:

```
<cc1:C1LineChartExtender ID="Panel1_C1LineChartExtender" runat="server"  
  
    Height="300" TargetControlID="Panel1" Width="400">  
  
    <SeriesTransition Duration="2000">  
  
    </SeriesTransition>  
  
    <Animation Duration="2000">  
  
    </Animation>  
  
    <SeriesList>
```

```

<cc1:LineChartSeries Label="#Wijmo" LegendEntry="True">

    <Data>

        <X>

            <Values>

                <cc1:ChartXData DateTimeValue="2011-04-10" />

                <cc1:ChartXData DateTimeValue="2011-04-11" />

                <cc1:ChartXData DateTimeValue="2011-04-12" />

                <cc1:ChartXData DateTimeValue="2011-04-13" />

                <cc1:ChartXData DateTimeValue="2011-04-14" />

                <cc1:ChartXData DateTimeValue="2011-04-15" />

                <cc1:ChartXData DateTimeValue="2011-04-16" />

    <Y Compass="West" Visible="False">
        <Labels TextAlign="Center">
            </Labels>
            <GridMajor Visible="True">
                </GridMajor>
            </Y>
        </Axis>
    </cc1:C1LineChartExtender>

```

This topic illustrates the following:

When you run your project the LineChart will appear like the following:

Applying Animation to the Line Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1LineChartExtender > Applying Animation to the Line Chart

When the **ChartAnimation.Enabled** property is true you can apply animation effects to the LineChart series. You can enhance your line chart's appeal by adding transition effects between the sliding or fading animated states to create a seamless flow between these states. Instead of the line chart series moving along smoothly from left to right while loading, the line chart could bounce in as the series slides in and bounce out as the series slides out. By default the ChartAnimation.Easing property is set to **EaseLinear** and when you reload the chart each series loads with a smooth linear transition effect.

To set the animation effect and animation duration for the composite chart series, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1LineChartExtender** and click **OK**. A LineChartExtender control is added to the page and the **TargetControlID** is set to **Panel1**.
4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1LineChartExtender**.
6. Expand the **Animation** node and set the **Easing** property to **EaseInBack**.
7. Increase the **Duration** value to **1500**.

C1PieChartExtender

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1PieChartExtender

The **C1PieChartExtender** control allows the user to show customized pie charts.

C1PieChartExtender Markup

The following markup creates C1PieChartExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1PieChartExtender ID="Panel1_C1PieChartExtender" runat="server"
    ChartLabelFormatString="" TargetControlID="Panel1">
    <footer compass="South" visible="False">
    </footer>
    <axis>
        <y compass="West" visible="False">
            <labels textalign="Center">
            </labels>
            <gridmajor visible="True">
            </gridmajor>
        </y>
    </axis>
</cc1:C1PieChartExtender>
```

C1PieChartExtender Tutorial

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1PieChartExtender > C1PieChartExtender Tutorial

This tutorial demonstrates how to attach the **C1PieChartExtender** to a **Panel** control, add data to the chart, and customize it by setting the extender properties.

```
</footer>
```

```
<axis>
```

```
<y compass="West" visible="False">
```

```
<labels textalign="Center">
```

```
</labels>
```

```
<gridmajor visible="True">
```

```
</gridmajor>
```

```
</y>

</axis>

</cc1:C1PieChartExtender>
```

In the next step you will set some of the extender properties.

Step 2 of 3: Adding Data to the Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1PieChartExtender > C1PieChartExtender Tutorial > Step 2 of 3: Adding Data to the Chart

In this topic you will set some of the properties to add data to the C1PieChartExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1PieChartExtender**.
3. Expand the **Header** node and enter **Steam - Mac Hardware** next to the **Text** property.
4. Click the ellipsis button next to the **SeriesList** property. The **PieChartSeries Collection Editor** dialog box opens.
 - a. Click **Add** five times to add five members.
 - b. Select a member and set the following properties for the **ChartSeries**:

Member	Label	Data
0	MacBook Pro	46.78
1	iMac	23.18
2	MacBook	20.25
3	Mac Pro	5.41
4	Mac mini	3.44

- c. Click **OK** to close the **PieChartSeries Collection Editor**.

Now run the project to see the **Pie** chart.

Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1PieChartExtender > C1PieChartExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the pie chart. Mouse over each piece and notice how it offsets, or explodes, from the rest of the chart.

Adding Data to the PieChart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1PieChartExtender > Adding Data to the PieChart

Data can be added to the **Pie** chart by defining a series. Once you add a series you can add the **ChartXData** and **ChartYData**. The following values can be added to the **ChartXData** or **ChartYData**: **DateTimeValue**, **DoubleValue**, and **StringValue**. In this example you will use string values for the **ChartXData** and double values for ChartYData.

To add data to the bar chart using the **PieChartSeries Collection**, complete the following:

1. In your Web application, add a reference to the C1.Web.Wijmo.Extenders.3.dll and then add a standard Panel control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the Extender Wizard, select **C1PieChartExtender** and click **OK**. A **C1PieChartExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.

```
<cc1:C1PieChartExtender ID="Panel1_C1PieChartExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
<SeriesTransition Duration="1000" Easing="EaseOutBounce">
```

```

</SeriesTransition>

<Footer Compass="South" Visible="False">

</Footer>

<Axis>

    <Y Compass="West" Visible="False">

        <Labels TextAlign="Center">

</Labels>

        <GridMajor Visible="True">

</GridMajor>

    </Y>

</Axis>

</cc1:C1PieChartExtender>

```

4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1PieChartExtender**.
6. Locate the **SeriesList** and click on the ellipsis button next to the SeriesList item. The **PieChartSeries Collection Editor** appears.
7. In the **PieChartSeries Collection Editor**, click the **Add** button to add a new PieChartSeries to the PieChart.
8. Click **Add** five times to add five new members in the **PieChartSeries Collection Editor**.
9. Enter the following values for each property:

Member	Data Property	Label Property	Offset Property
0	46.78	MacBook Pro	15
1	23.18	iMac	0
2	20.25	MacBook	0
3	5.41	Mac Pro	
4	3.44	Mac Mini	

10. Click **OK** to save and close the **PieChartSeries Collection Editor**.

Adding Data to the Pie Chart in Source View:

To add data to the Pie chart, click the source tab and add the following code in your source file:

```
<cc1:C1PieChartExtender ID="Panel1_C1PieChartExtender" runat="server"
    TargetControlID="Panel1">
    <SeriesTransition Duration="1000" Easing="EaseOutBounce">
    </SeriesTransition>
    <SeriesList>
        <cc1:PieChartSeries Data="46.78" Label="MacBook Pro" LegendEntry="True"
            Offset="15">
        </cc1:PieChartSeries>
        <cc1:PieChartSeries Data="23.18" Label="iMac" LegendEntry="True">
        </cc1:PieChartSeries>
        <cc1:PieChartSeries Data="20.25" Label="MacBook" LegendEntry="True">
        </cc1:PieChartSeries>
        <cc1:PieChartSeries Data="5.41" Label="Mac Pro" LegendEntry="True">
        </cc1:PieChartSeries>
        <cc1:PieChartSeries Data="3.44" Label="Mac Mini" LegendEntry="True">
        </cc1:PieChartSeries>
    </SeriesList>
    <Footer Compass="South" Visible="False">
    </Footer>
    <Axis>
        <Y Compass="West" Visible="False">
        <Labels TextAlign="Center">
        </Labels>
```

```

        <GridMajor Visible="True">

        </GridMajor>

    </Y>

</Axis>

</cc1:C1PieChartExtender>

```

This topic illustrates the following:

When you run your project the Pie chart will appear like the following:

Creating a Doughnut Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1PieChartExtender > Creating a Doughnut Chart

To create a doughnut chart, use the **InnerRadius** property like the following:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1PieChartExtender**.
3. Locate the **InnerRadius** and set it to **30**.

Creating a Doughnut Chart in Source View:

To create a Doughnut chart in source view, click the source tab and add the following code in your source file:

```

<cc1:C1PieChartExtender ID="Panel1_C1PieChartExtender" runat="server"

    Height="350" InnerRadius="30" TargetControlID="Panel1" Width="350">

    <SeriesTransition Duration="1000" Easing="EaseOutBounce">

```

```

</SeriesTransition>

<SeriesList>

    <cc1:PieChartSeries Data="46.78" Label="MacBook Pro" LegendEntry="True"

        Offset="15">

    </cc1:PieChartSeries>

    <cc1:PieChartSeries Data="23.18" Label="iMac" LegendEntry="True">

    </cc1:PieChartSeries>

    <cc1:PieChartSeries Data="20.25" Label="MacBook" LegendEntry="True">

    </cc1:PieChartSeries>

    <cc1:PieChartSeries Data="5.41" Label="Mac Pro" LegendEntry="True">

    </cc1:PieChartSeries>

    <cc1:PieChartSeries Data="3.44" Label="Mac Mini" LegendEntry="True">

    </cc1:PieChartSeries>

</SeriesList>

<Footer Compass="South" Visible="False">

</Footer>

<Axis>

    <Y Compass="West" Visible="False">

        <Labels TextAlign="Center">

        </Labels>

        <GridMajor Visible="True">

        </GridMajor>

    </Y>

</Axis>

</cc1:C1PieChartExtender>

```

This topic illustrates the following:

The following image shows the doughnut chart created by using the **innerRadius** property.

Applying Animation to the Pie Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1PieChartExtender > Applying Animation to the Pie Chart

When the `ChartAnimation.Enabled` property is true you can apply animation effects to the bar chart series. You can enhance your pie chart's appeal by adding transition effects between the sliding or fading animated states to create a seamless flow between these states. Instead of the composite chart series moving along smoothly from left to right while loading, the pie chart could bounce in as the series slides in and bounce out as the series slides out. By default the `ChartAnimation.Easing` property is set to **EaseLinear** and when you reload the chart each series loads with a smooth linear transition effect.

To set the animation effect and animation duration for the pie chart series, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the Extender Wizard, select **C1PieChartExtender** and click **OK**. A **PieChartExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.
4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1PieChartExtender**.
6. Expand the **Animation** node and set the **Easing** property to **EaseInBack**.
7. Increase the **Duration** value to **1500**.

C1ScatterChartExtender

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender

The **C1ScatterChartExtender** control allows the user to show customized scatter charts that use two values to represent each data point. Scatter charts are useful in depicting relationships between two dimensions of the data, and are often used in statistical analysis of data.

C1ScatterChartExtender Markup

The following markup creates a **C1ScatterChartExtender** control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1ScatterChartExtender ID="Panel4_C1ScatterChartExtender" runat="server"
    TargetControlID="Panel4">
    <SeriesTransition Duration="2000">
    </SeriesTransition>
    <Animation Duration="2000">
    </Animation>
    <Footer Compass="South" Visible="False">
    </Footer>
    <Legend>
        <Size Height="3" Width="30">
        </Size>
    </Legend>
    <Axis>
        <Y Compass="West" Visible="False">
```

```

        <Labels TextAlign="Center">

        </Labels>

        <GridMajor Visible="True">

        </GridMajor>

    </Y>

</Axis>

</cc1:C1ScatterChartExtender>

```

C1ScatterChartExtender Tutorial

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender > C1ScatterChartExtender Tutorial

This tutorial demonstrates how to attach the **C1ScatterChartExtender** to a **Panel** control, add data to the chart, and customize it by setting the extender properties.

Step 1 of 3: Adding a C1ScatterChartExtender to the Page

Step 2 of 3: Adding Data to the Chart

Step 3 of 3: Running Scatter Chart Project

Step 1 of 3: Adding a C1ScatterChartExtender to the Page

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender > C1ScatterChartExtender Tutorial > Step 1 of 3: Adding a C1ScatterChartExtender to the Page

In this topic you add some content to a **Panel** control and associate a C1ScatterChartExtender control with it to create a bubble chart.

1. In your Web application, add a standard **Panel** control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select C1ScatterChartExtender and click **OK**. A C1ScatterChartExtender control is added to the page and the **TargetControlID** is set to **Panel1**.

```
<cc1:C1ScatterChartExtender ID="Panel4_C1ScatterChartExtender" runat="server">
```

```
TargetControlID="Panel4">  
  
<SeriesTransition Duration="2000">  
  
</SeriesTransition>  
  
<Animation Duration="2000">  
  
</Animation>  
  
<Footer Compass="South" Visible="False">  
  
</Footer>  
  
<Legend>  
  
    <Size Height="3" Width="30">  
  
    </Size>  
  
</Legend>  
  
<Axis>  
  
    <Y Compass="West" Visible="False">  
  
        <Labels TextAlign="Center">  
  
        </Labels>  
  
        <GridMajor Visible="True">  
  
        </GridMajor>  
  
    </Y>  
  
</Axis>  
  
</cc1:C1ScatterChartExtender>
```

In the next step you will set some of the extender properties.

Step 2 of 3: Adding Data to the Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender >
C1ScatterChartExtender Tutorial > Step 2 of 3: Adding Data to the Chart

In this topic you will set some of the properties to add data to the **C1ScatterChartExtender**.

1. Select **View | Properties** Window in the Visual Studio menu.

2. Click the drop-down list at the top of the Properties window and select **Panel1_C1ScatterChartExtender**.
3. Expand the **Header** node and enter **Sales** next to the **Text** property.
4. Click the ellipsis button next to the **SeriesList** property. The **ChartSeries Collection Editor** dialog box opens.
 - a. Click **Add** two times to add two new members.
 - b. For the first member, set the **Label** property to *Units Sold*.
 - c. For the second member, set the **Label** property to *Unit Prices*.
 - d. Expand the **Data** node and enter the following values next to **DoubleValues**.

Member	Property	Value
0	X	161.2, 167.5, 159.5, 157, 155.8, 170, 159.1, 166, 176.2, 160.2, 172.5, 170.9, 172.9, 153.4, 160, 147.2, 168.2, 175, 157, 167.6
0	Y	51.6, 59, 49.2, 63, 53.6, 59, 47.6, 69.8, 66.8, 75.2, 55.2, 54.2, 62.5, 42, 50, 49.8, 49.2, 73.2, 47.8, 68.8
1	X	174, 175.3, 193.5, 186.5, 187.2, 181.5, 184, 184.5, 175, 184, 180, 177.8, 192, 176, 174, 184, 192.7, 171.5, 173, 176
1	Y	65.6, 71.8, 80.7, 72.6, 78.8, 74.8, 86.4, 78.4, 62, 81.6, 76.6, 83.6, 90, 74.6, 71, 79.6, 93.8, 70, 72.4, 85.9

- e. Click **OK** to close the **ScatterChartSeries Collection Editor**.

Now run the project to see the scatter chart

Step 3 of 3: Running Scatter Chart Project

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender > C1ScatterChartExtender Tutorial > Step 3 of 3: Running Scatter Chart Project

Press **F5** to run the project and view the scatter chart.

Adding Data to the Scatter Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender > Adding Data to the Scatter Chart

Data can be added to the Scatter chart by defining a series. Once you add a series you can add the ChartXData and ChartYData. The following values can be added to the ChartXData or ChartYData: DateTimeValue, DoubleValue, and StringValue.

To add data to the scatter chart using the ScatterChartSeries Collection, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard Panel control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the Extender Wizard, select **C1ScatterChartExtender** and click **OK**. A **C1ScatterChartExtender** control is added to the page and the **TargetControlID** is set to Panel1.

```
<cc1:C1ScatterChartExtender ID="Panel1_C1ScatterChartExtender" runat="server"
```

```
TargetControlID="Panel1">
```

```
<SeriesTransition Duration="2000" Enabled="False">
```

```
</SeriesTransition>
```

```
<Animation Duration="2000" Enabled="False">
```

```
</Animation>
```

```
<Footer Compass="South" Visible="False">
```

```
</Footer>
```

```
<Legend>
```

```
<Size Height="3" Width="30">
```

```
</Size>
```

```

</Legend>

<Axis>

    <Y Compass="West" Visible="False">

        <Labels TextAlign="Center">

            </Labels>

            <GridMajor Visible="True">

                </GridMajor>

            </Y>

        </Axis>

    </cc1:C1ScatterChartExtender>

```

4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1ScatterChartExtender**.
6. Locate the **SeriesList** and click on the ellipsis button next to the **SeriesList** item. The **ScatterChartSeries Collection Editor** appears.
7. In the **ScatterChartSeries Collection Editor**, click the **Add** button to add a new ScatterChartSeries to the ScatterChart.
8. Select **Data -> X** from the properties pane in the **ScatterChartSeries Collection Editor** and click the ellipsis button next to the Values property to open the **ChartXData Collection Editor**.
9. Click **Add** 25 times to add 25 members and enter the following values next to the **DoubleValue** property for each member: 0, 2, 3, 4, 5, 7, 7, 8, 9, 10, 11, 13, 15, 16, 17, 17.5, 18, 20, 21, 22, 23, 24, 25, 25.5, and 26.
10. Click **OK** to save and close the **ChartXData Collection Editor**.
11. Select **Data -> Y** from the properties pane in the **ScatterChartSeries Collection Editor** and click the ellipsis button next to the Values property to open the **ChartYData Collection Editor**.
12. Click **Add** 25 times to add 25 members and enter the following data next to the DoubleValues property: 1, 1.5, 3, 4, 8, 7.5, 11, 10, 12, 16, 11, 16, 18, 17, 17.5, 17.5, 20, 20, 20, 21, 21, 21.5, 25, 25.5, and 28.
13. Click **OK** to save and close the **ChartYData Collection Editor**.
14. Set **LegendEntry** to **False** and click **OK** to save and close the **ScatterChartSeries Collection Editor**.

Adding the Data to the Scatter Chart in Source View

To add data to the Scatter chart, click the source tab and add the following code in your source file:

```
<cc1:C1ScatterChartExtender ID="Panel1_C1ScatterChartExtender" runat="server">
```

```

</cc1:C1ScatterChartExtender>

```

This topic illustrates the following:

When you run your project the Scatter chart will appear like the following:

Changing the Marker for the Scatter Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender > Changing the Marker for the Scatter Chart

To create diamond markers instead of circles, use the SeriesList's Markers property to define the type of marker used. You can choose from Circle, Tri, InvertedTri, Box, Diamond or Cross.

This topic illustrates how to change marker type in **Design** view and in **Source** view.

Changing the Marker Type in Design View:

To change the marker type of your C1ScatterChart, follow these steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1ScatterChartExtender**.
3. Click the ellipsis button next to the **SeriesList** property. The **ScatterChartSeries Collection Editor** appears.
4. Select the series from the Members list that you wish to change its marker type. In this example we'll select the first series from the Members list.
5. Select the dropdown arrow next to the **MarkerType** and then choose **Diamond**.
6. Click OK.

The Diamond marker type is applied to the ScatterChartSeries.

Changing the Marker Type in Source View

To change the marker type for the first series in Source view, add <Markers Type="Diamond"> </Markers> tag so that the tag resembles the following:

```
<cc1:C1ScatterChartExtender ID="Panel1_C1ScatterChartExtender" runat="server"
    TargetControlID="Panel1">
    <seriestransition duration="2000" enabled="False">
    </seriestransition>
    <animation duration="2000" enabled="False">
    </animation>
    <SeriesList>
    <cc1:ScatterChartSeries LegendEntry="False" MarkerType="Diamond">
    <Data>
    <X>
    <Values>
    <cc1:ChartXData DoubleValue="0" />
    <cc1:ChartXData DoubleValue="1" />
    <cc1:ChartXData DoubleValue="2" />
```

```
<cc1:ChartXData DoubleValue="3" />
<cc1:ChartXData DoubleValue="4" />
<cc1:ChartXData DoubleValue="5" />
<cc1:ChartXData DoubleValue="7" />
<cc1:ChartXData DoubleValue="7" />
<cc1:ChartXData DoubleValue="8" />

This Topic Illustrates the Following:

The following image shows a **C1ScatterChart** having a diamond marker type:

Applying Animation to the Scatter Chart

Wijmo Control Toolkit Extender Controls > Chart Extenders > C1ScatterChartExtender > Applying Animation to the Scatter Chart

When the **ChartAnimation.Enabled** property is true you can apply animation effects to the Scatter chart series. You can enhance your pie chart's appeal by adding transition effects between the sliding or fading animated states to create a seamless flow between these states. Instead of the composite chart series moving along smoothly from left to right while loading, the scatter chart could bounce in as the series slides in and bounce out as the series slides out. By default the ChartAnimation.Easing property is set to EaseLinear and when you reload the chart each series loads with a smooth linear transition effect.

To set the animation effect and animation duration for the pie chart series, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard Panel control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1ScatterChartExtender** and click **OK**. A ScatterChartExtender control is added to the page and the TargetControlID is set to Panel1.
4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1ScatterChartExtender**.
6. Expand the **Animation** node and set the **Easing** property to **EaseInBack**.
7. Increase the **Duration** value to 1500.

C1ComboBox Extender

Use C1ComboBoxExtender to display a resizable and editable text box/drop-down list on your HTML page.

C1ComboBoxExtender Markup

The following markup creates a C1ComboBoxExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1ComboBoxExtender ID="C1ComboBoxExtender1" runat="server"
TargetControlID="DropDownList1">

  </cc1:C1ComboBoxExtender>
```

C1ComboBoxExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > C1ComboBoxExtender Tutorial

This tutorial demonstrates how to attach the C1ComboBoxExtender to a **DropDownList** control and customize the combobox by setting the extender properties.

See Also

Step 1 of 4: Creating a ComboBox

Step 2 of 4: Adding a C1ComboBoxExtender to the Page

Step 3 of 4: Customizing the ComboBox

Step 4 of 4: Running the ComboBox Project

Step 1 of 4: Creating a ComboBox

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > C1ComboBoxExtender Tutorial > Step 1 of 4: Creating a ComboBox

In this topic you will add some list items to a drop-down list which will later become a combo box.

1. In your Web application, add a standard DropDownList control to the main content of your page.
2. Add some ListItem for the dropdown list. For example:

```
<asp:DropDownList ID="DropDownList1" runat="server">

    <asp:ListItem Value="c++" Text="c++"> </asp:ListItem>

    <asp:ListItem Value="java" Text="java"> </asp:ListItem>

    <asp:ListItem Value="php" Text="php"> </asp:ListItem>

    <asp:ListItem Value="coldfusion" Text="coldfusion"> </asp:ListItem>

    <asp:ListItem Value="javascript" Text="javascript"> </asp:ListItem>

    <asp:ListItem Value="asp" Text="asp"> </asp:ListItem>

    <asp:ListItem Value="ruby" Text="ruby"> </asp:ListItem>

    <asp:ListItem Value="python" Text="python"> </asp:ListItem>

    <asp:ListItem Value="c" Text="c"> </asp:ListItem>

    <asp:ListItem Value="scala" Text="scala"> </asp:ListItem>

    <asp:ListItem Value="groovy" Text="groovy"> </asp:ListItem>

    <asp:ListItem Value="haskell" Text="haskell"> </asp:ListItem>

    <asp:ListItem Value="perl" Text="perl"> </asp:ListItem>

</asp:DropDownList>
```

Add a C1ComboBoxExtender to the page in the next step.

Step 2 of 4: Adding a C1ComboBoxExtender to the Page

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > C1ComboBoxExtender Tutorial > Step 2 of 4: Adding a C1ComboBoxExtender to the Page

In this step, you will add a **C1ComboBoxExtender** control to associate with the **DropDownList** to create the combobox.

1. In Source view, drag a **C1ComboBoxExtender** control from the Toolbox and place it under the **DropDownList**.
2. Set the **TargetControlID** property to DropDownList1.

```
<cc1:C1ComboBoxExtender ID="C1ComboBoxExtender1" runat="server"
TargetControlID="DropDownList1">
```

```
</cc1:C1ComboBoxExtender>
```

Now you can begin setting properties for the **C1ComboBoxExtender** to format the **DropDownList**.

Step 3 of 4: Customizing the ComboBox

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > C1ComboBoxExtender Tutorial > Step 3 of 4: Customizing the ComboBox

In this topic you will set some of the properties for the C1ComboBoxExtender to change the location of the combobox's arrow, to allow multiple selections, and to allow selections when an item receives focus.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **C1ComboBoxExtender1**.
3. Set the **C1ComboBoxExtender.SelectOnItemFocus** property to True. In the application, when a user mouses over an item in the drop-down list, it will be selected.
4. Set the **C1ComboBoxExtender.TriggerPosition** property to Left. This will make the arrow in the combobox appear on the left side of the text box.
5. Set the **C1ComboBoxExtender.SelectionMode** property to **Multiple**. This will allow users to select more than one item in the list.

The markup for the C1ComboBoxExtender will now look like this:

```
<cc1:C1ComboBoxExtender ID="C1ComboBoxExtender1" runat="server"
    TargetControlID="DropDownList1" SelectionMode="Multiple" TriggerPosition="Left"
    SelectOnItemFocus="True"> </cc1:C1ComboBoxExtender>
```

Now run the project to see the formatted combobox.

Step 4 of 4: Running the ComboBox Project

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > C1ComboBoxExtender Tutorial > Step 4 of 4: Running the ComboBox Project

Press **F5** to run the project and view the following:

- The **DropDownList** becomes formatted as a combobox using the **C1ComboBoxExtender** control.
- The arrow appears to the left of the text box.
- Mouse over multiple items in the combobox list. They become selected.

Adding Data to the ComboBox

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > Adding Data to the ComboBox

This topic illustrates how to add data to the combobox in Design View and Source view.

Adding Data to the ComboBox in Design View:

To add data to the ComboBox in design view, follow these steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1ComboBoxExtender**.
3. Click on the ellipsis button next to the **Items** property. The **C1ComboBoxItem Collection Editor** appears.
4. In the **C1ComboBoxItem Collection Editor**, click the **Add** button four times to add four new C1ComboBoxItems to the ComboBox.
5. Select the member and set the following properties for the ComboBoxItems.

Member	Label	Value
0	c++	c++
1	java	java
2	php	php
3	coldfusion	coldfusion
4	javascript	javascript

5	asp	asp
6	ruby	ruby
7	c	c

- Click **OK** to close and save the collection editor.

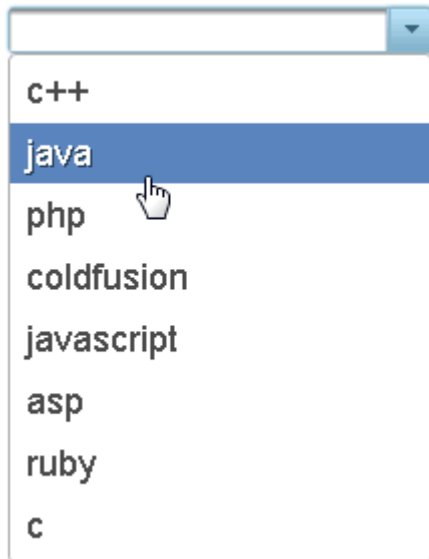

Adding Data to the ComboBox in Source View:

To add data to the ComboBox, click the source tab and add the following code in your source file:

```
<cc1:C1ComboBoxExtender ID="Panel1_C1ComboBoxExtender" runat="server"
    TargetControlID="Panel1">
    <Data>
        <Items>
            <cc1:C1ComboBoxItem Label="c++" Value="c++" />
            <cc1:C1ComboBoxItem Label="java" Value="java" />
            <cc1:C1ComboBoxItem Label="php" Value="php" />
            <cc1:C1ComboBoxItem Label="coldfusion" Value="coldfusion" />
            <cc1:C1ComboBoxItem Label="javascript" Value="javascript" />
            <cc1:C1ComboBoxItem Label="asp" Value="asp" />
            <cc1:C1ComboBoxItem Label="ruby" Value="ruby" />
            <cc1:C1ComboBoxItem Label="c" Value="c" />
        </Items>
    </Data>
</cc1:C1ComboBoxExtender>
```

This Topic Illustrates the Following:

The following image shows a **C1ComboBox** with 8 items:

Adding Multiple Columns

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > Adding Multiple Columns

This topic illustrates how to add multiple columns in **Design** view and in **Source** view.

Adding Multiple Columns in Design View:

To add multiple columns to the combobox, follow these steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1ComboBoxExtender**.
3. Click the ellipsis button next to the **Columns** property. The **C1ComboBoxColumn Collection Editor** appears.
4. Select the member and set the following properties for the C1ComboBoxColumns.

Member	Name
0	Column1
1	Column2
2	Column3
3	Column4

Click **OK** to save and close the **C1ComboBoxColumn Collection Editor**.

Click on the ellipsis button next to the **Items** property. The **C1ComboBoxItem Collection Editor** appears.

In the **C1ComboBoxItem Collection Editor**, click the **Add** button six times to add six new **C1ComboBoxItems** to the ComboBox.

Select the member and set the following properties for the **ComboBoxItems**.

Member	Label	Value	Y-String Values
0	Label1	Value1	cellA0, cellA1, cellA2, cellA3
1	Label2	Value2	cellB0, cellB1, cellB2, cellB3
3	Label3	Value3	cellC0, cellC1, cellC2, cellC3
4	Label5	Value5	cellE0, cellE1, cellE2, cellE3
5	Label6	Value6	cellF0,

			cellF1,
			cellF2,
			cellF3

9. Click **OK** to close and save the collection editor.

Adding Multiple Columns in Source View

To add multiple columns to the combobox, select the Source tab and add the following code:

```
<form id="form1" runat="server">

    <div>

        <asp:Panel ID="Panel1" runat="server" Height="15px" Width="180px"
        DropdownHeight="500"

            DropdownWidth="400">

        </asp:Panel>

        <cc1:C1ComboBoxExtender ID="Panel1_C1ComboBoxExtender" runat="server"

            TargetControlID="Panel1">

            <Columns>

                <cc1:C1ComboBoxColumn Name="Column1" />

                <cc1:C1ComboBoxColumn Name="Column2" />

                <cc1:C1ComboBoxColumn Name="Column3" />

                <cc1:C1ComboBoxColumn Name="Column4" />

            </Columns>

            <Data>

                <Items>

                    <cc1:C1ComboBoxItem Cells="A0,A1,A2,A3" Label="Label1" Value="Value1" />

                    <cc1:C1ComboBoxItem Cells="B0,B1,B2,B3" Label="Label2" Value="Value2" />

                    <cc1:C1ComboBoxItem Cells="C0,C1,C2,C3" Label="Label3" Value="Value3" />

                </Items>

            </Data>

        </C1ComboBoxExtender>

    </div>

</form>
```

```

<cc1:C1ComboBoxItem Cells="D0,D1,D2,D3" Label="Label4" Value="Value4" />

<cc1:C1ComboBoxItem Cells="E0,E1,E2,E3" Label="Label5" Value="Value5" />

<cc1:C1ComboBoxItem Cells="F0,F1,F2,F3" Label="Label6" Value="Value6" />

</Items>

</Data>

</cc1:C1ComboBoxExtender>

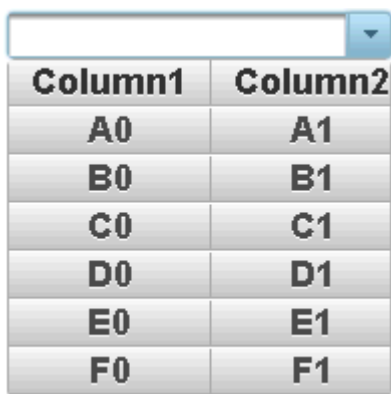

</div>

</form>

```

This Topic Illustrates the Following:

The following image shows a **C1ComboBox** with two columns:

Column1	Column2
A0	A1
B0	B1
C0	C1
D0	D1
E0	E1
F0	F1

Applying Animation to the ComboBox

Wijmo Control Toolkit Extender Controls > C1ComboBox Extender > Applying Animation to the ComboBox

To set the animation effect and animation duration for the combobox, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard Panel control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1ComboBoxExtender** and click **OK**. A ComboBoxExtender control is added to the page and the **TargetControlID** is set to **Panel1**.
4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1_C1ComboBoxExtender**.
6. Expand the **ShowingAnimation** node and set the **Easing** property to **EaseInBounce**.
7. Increase the **Duration** value to **1500**.

C1DataSource

Wijmo Control Toolkit Extender Controls > C1DataSource

The C1DataSource class can be used to provide tabular data for other extenders. You can use the C1DataSource class along with a datareader and an optional proxy.

C1DataSource Tutorial

Wijmo Control Toolkit Extender Controls > C1DataSource > C1DataSource Tutorial

In this tutorial you'll use the C1DataSource class to load remote data into the C1ListExtender control using a datareader and a proxy.

See Also

Step 1 of 3: Adding C1DataSource to the Page

Step 2 of 3: Initializing C1DataSource

Step 3 of 3: Running the Project

Step 1 of 3: Adding C1DataSource to the Page

Wijmo Control Toolkit Extender Controls > C1DataSource > C1DataSource Tutorial > Step 1 of 3: Adding C1DataSource to the Page

In this step you'll add a C1ListExtender control and a C1DataSource class containing a reader and proxy to the page.

Complete the following steps:

1. In Visual Studio select **File | New Project**.
2. In the **New Project** dialog box, choose a language and then **Web** from the list of installed templates. Choose the **ASP.NET Empty Web Application**, name your application and choose **OK**.
3. In the Solution Explorer, right-click the project name and choose **Add | New Item**.
4. In the **Add New Item** dialog box choose **Web Form** from the list of templates, name the file "Default.aspx", and click **Add**.
5. In the Solution Explorer, right-click the project and choose **Add Reference**. Locate and add a reference to the **C1.Web.Wijmo.Extenders** assembly.
6. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register assembly="C1.Web.Wijmo.Extenders.4"
namespace="C1.Web.Wijmo.Extenders.C1DataSource" tagPrefix="cc1" %>
```

```
<%@ Register assembly="C1.Web.Wijmo.Extenders.4"
namespace="C1.Web.Wijmo.Extenders.C1List" tagPrefix="cc1" %>
```

Note that you may need to edit the above depending on the assembly you are using.

7. Add the following markup between the initial <div> </div> tags on the page:

```
<cc1:C1DataSource ID="DataSource1" runat="server"
onclientloaded="datasource_loaded" onclientloading="datasource_loading">

  <Reader>

    <Fields>

      <cc1:ReaderField Name="label">

        <Mapping Function="reader_mapping" />

      </cc1:ReaderField>

      <cc1:ReaderField Name="value">

        <Mapping Name="name" />

      </cc1:ReaderField>

      <cc1:ReaderField Name="selected">

        <DefaultValue ValueString="false" />

      </cc1:ReaderField>

    </Fields>

  </Reader>

  <Proxy>

    <Options>

      <cc1:ProxyField Name="url">

        <Value NeedQuotes="True"
ValueString="http://ws.geonames.org/searchJSON" />

      </cc1:ProxyField>

      <cc1:ProxyField Name="dataType">

        <Value NeedQuotes="True" ValueString="jsonp" />

      </cc1:ProxyField>

    </Options>

  </Proxy>

</C1DataSource>
```

```
</cc1:ProxyField>

<cc1:ProxyField Name="data">

    <Value ValueString="ajaxData" />

</cc1:ProxyField>

<cc1:ProxyField Name="key">

    <Value NeedQuotes="True" ValueString="geonames" />

</cc1:ProxyField>

</Options>

</Proxy>

</cc1:C1DataSource>
```

Notice that the **C1DataSource** markup includes tags for the **Reader** and **Proxy**.

In the next step you'll add input controls and script to initialize elements of the application.

Step 2 of 3: Initializing C1DataSource

Wijmo Control Toolkit Extender Controls > C1DataSource > C1DataSource Tutorial > Step 2 of 3:
Initializing C1DataSource

In this topic you will add input controls and script to initialize the datasource.

1. Add the following markup just under the data source markup you added in the previous step:

```
<cc1:C1ListExtender runat="server" onclientsselected="list_selected"
TargetSelector="#list"> </cc1:C1ListExtender>

<div class="ui-widget">

    <input style="width: 400px" id="testinput" type="text" class="ui-widget-content ui-
corner-all" /> <input type="button" onclick="loadRemoteData()" id="loadremote"
value="Load Remote Data" />

    <div id="list" style="height: 300px; width: 400px;">

        </div>

    </div>

</div>
```

This adds a text box, button, and a **C1ListExtender** which will be used to view remote data.

2. Add the following script tags just under the markup you added in the previous steps:

```
<script id="scriptInit" type="text/javascript">

    var list = $("#list");

    var input = $('#testinput');

    var ajaxData = {

        featureClass: "P",

        style: "full",

        maxRows: 12,

        name_startsWith: 'ab'

    };

    function reader_mapping(item)

    {

        return item.name + (item.adminName1 ? ", " + item.adminName1 : "") + ", " +

item.countryName

    }

    function list_selected(event, ui)

    {

        var item = ui.item;

        input.val(item.value);

        list.wijlist('deactivate');

    }

    function datasource_loading()

    {

        input.addClass('wijmo-wijcombobox-loading');

    }

    function datasource_loaded(data)
```

```
{

    list.wijlist('setItems', data.items);

    list.wijlist('renderList');

    list.wijlist('refreshSuperPanel');

    input.removeClass('wijmo-wijcombobox-loading');

}

$(document).ready(function ()

{

    DataSource1.load();

    input.bind("keydown.wijcombobox", function (event)

    {

        var keyCode = $.ui.keyCode;

        switch (event.keyCode)

        {

            case keyCode.UP:

                list.wijlist('previous', event);

                // prevent moving cursor to beginning of text field in some browsers

                event.preventDefault();

                break;

            case keyCode.DOWN:

                if (!list.is(':visible'))

                {

                    list.show();

                    return;

                }

                list.wijlist('next', event);
```

```

        // prevent moving cursor to end of text field in some browsers
        event.preventDefault();

        break;

    case keyCode.ENTER:

        event.preventDefault();

        list.wijlist('select', event);

        break;

    case keyCode.PAGE_UP:

        list.wijlist('previousPage');

        break;

    case keyCode.PAGE_DOWN:

        list.wijlist('nextPage');

        break;

    default:

        break;

    }

});

});

function loadRemoteData()
{
    var datasource = DataSource1;

    datasource.proxy.options.data.name_startsWith = $('#testinput').val();

    datasource.load();

}

</script>

```

This script loads and displays data.

In this step you initialized the elements in the application. In the next step you'll view run-time interactions in the application.

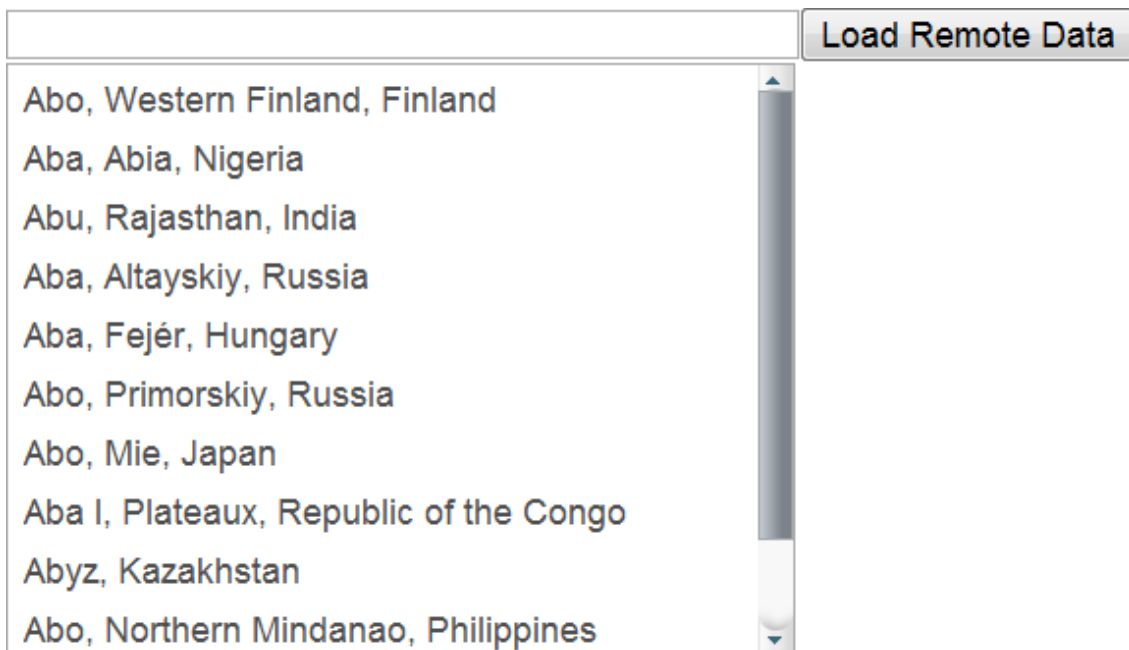

Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1DataSource > C1DataSource Tutorial > Step 3 of 3: Running the Project

In the previous steps you added the **C1DataSource** and other controls to the page and initialized them. All that's left is to run your application.

Complete the following steps:

1. Press **F5** to run the project. Observe that remote data appears in the list:

2. Type a location, for example "Pittsburgh" in the text box and click the **Load Remote Data** button. Observe that locations with the same name are loaded into the list.

Reading Local Data

Wijmo Control Toolkit Extender Controls > C1DataSource > Reading Local Data

You can use the following to read local data:

```
// array to read
```

```
var testArray = ["c++", "java", "php", "coldfusion", "javascript", "asp", "ruby", "python", "c",  
"scala", "groovy", "haskell", "perl"];
```

```
// create datareader of array
```

```
var myReader = new wijarrayreader([{{name: 'label'}, {name: 'value'}, {name: 'selected',defaultValue: false}}]);
```

```
// create datasource
```

```
var datasource = new wijdatasource({
```

```
    reader: myReader,
```

```
    data: testArray,
```

```
    loaded: function (data){
```

```
        // get items by data.items
```

```
        var items = data.items;
```

```
    }
```

```
});
```

```
// load datasource, loaded event will be fired after loading.
```

```
datasource.load();
```

Reading Remote Data Using a Proxy

Wijmo Control Toolkit Extender Controls > C1DataSource > Reading Remote Data Using a Proxy

You can use the following to read remote data using a proxy:

```
// define a proxy
```

```
var proxy = new wijhttpproxy({
```

```
    url: "http://ws.geonames.org/searchJSON",
```

```
    dataType: "jsonp",
```

```
    data: {
```

```
        featureClass: "P",
```

```
        style: "full",
```

```
        maxRows: 12,
```

```
        name_startsWith: 'ab'
```

```
    },  
    key: 'geonames'  
  });  
  
  // define a reader  
  var myReader = new wijarrayreader([  
    {  
      name: 'label',  
      mapping: function (item){  
        return item.name + (item.adminName1 ? ", " + item.adminName1 : "") + ", " +  
        item.countryName  
      }  
    },  
    {name: 'value', mapping: 'name'}}]);  
  
  // create datasource  
  var datasource = new wijdatasource({  
    reader: myReader,  
    proxy: proxy,  
    loaded: function (data){  
      // read items.  
      var items = data.items;  
    }  
  });  
  
  // trigger load.  
  datasource.load();
```

C1DialogExtender

The **C1DialogExtender** control formats a dialog box for displaying information. The dialog window can be moved, resized, and closed.

C1DialogExtender Markup

The following markup creates a C1DialogExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1DialogExtender ID="Panel1_C1DialogExtender" runat="server"
    TargetControlID="Panel1">
</cc1:C1DialogExtender>
```

C1DialogExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1DialogExtender > C1DialogExtender Tutorial

This tutorial demonstrates how to attach the C1DialogExtender to a **Panel** control and customize the dialog box by setting the extender properties.

See Also

Step 1 of 4: Creating a Dialog Box

Step 2 of 4: Adding a C1DialogExtender to the Page

Step 3 of 4: Customizing the Dialog Box

Step 4 of 4: Running the Project

Step 1 of 4: Creating a Dialog Box

Wijmo Control Toolkit Extender Controls > C1DialogExtender > C1DialogExtender Tutorial > Step 1 of 4: Creating a Dialog Box

In this topic you add some content to a **Panel** control that will later become a dialog box.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Add some content for the dialog box. For example:

```
<asp:Panel ID="Panel1" runat="server" Width="845px">
```

```
    <h2>Dialog Box</h2>
```

```
    <br />
```

```
    <span>This is the default dialog which is useful for displaying information. The dialog window can be moved, resized and closed with the 'x' icon.</span>
```

```
</asp:Panel>
```

2. Next add a C1DialogExtender control to the page.

Step 2 of 4: Adding a C1DialogExtender to the Page

Wijmo Control Toolkit Extender Controls > C1DialogExtender > C1DialogExtender Tutorial > Step 2 of 4: Adding a C1DialogExtender to the Page

In this step, you will add a C1DialogExtender control to associate with the **Panel** to create the dialog box.

1. In Design view, select the **Panel**, click the smart tag, and select **Add Extender** from the **Panel Tasks** menu.
2. In the Extender Wizard, select **C1DialogExtender** and click **OK**. The **TargetControlID** is automatically set to **Panel1**.

```
<cc1:C1DialogExtender ID="Panel1_C1DialogExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
</cc1:C1DialogExtender>
```

Now you can begin setting properties for the C1DialogExtender to format the dialog box.

Step 3 of 4: Customizing the Dialog Box

Wijmo Control Toolkit Extender Controls > C1DialogExtender > C1DialogExtender Tutorial > Step 3 of 4: Customizing the Dialog Box

In this topic you will set some of the properties for the C1DialogExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1DialogExtender**.
3. Set the C1DialogExtender.Title property to **Overview**.
4. Set the C1DialogExtender.Modal property to **True** to create a modal dialog box.
5. Set the **WidgetExtenderControlBase.Theme** property to midnight.

The markup for the C1DialogExtender will now look like this:

```
<cc1:C1DialogExtender ID="Panel1_C1DialogExtender" runat="server"
    Modal="True" TargetControlID="Panel1" Theme="midnight"
    Title="Overview">
</cc1:C1DialogExtender>
```

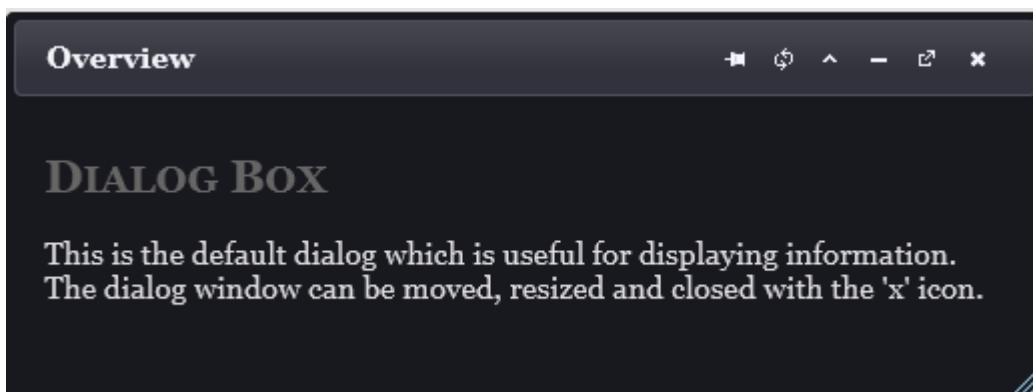

Now run the project to see the formatted dialog box.

Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1DialogExtender > C1DialogExtender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- "Overview" appears in the title bar of the dialog box.
- The dialog box has the midnight theme.
- The dialog box is a modal dialog box, so you cannot perform other operations on the page until the dialog box is closed.

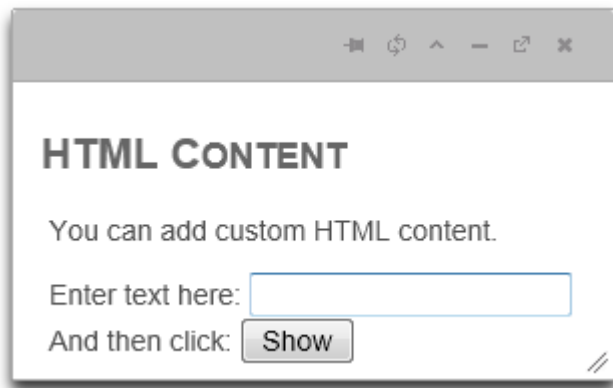

Setting Custom HTMLContent

```
</div>
```

```
</div>
```

4. Click the **Panel** smart tag and select **Add Extender** from the Tasks menu.
5. In the **Extender Wizard**, select **C1DialogExtender** and click **OK**. A **C1DialogExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.
6. Run your application. Your dialog box should resemble the following image. You can enter text and click **Show** to show an alert dialog box.

Using the Modal Dialog Window Options

Wijmo Control Toolkit Extender Controls > C1DialogExtender > Using the Modal Dialog Window Options

The C1DialogExtender control can be used as a Modal dialog window. This is especially useful if you need to communicate information users must have before they continue with the next step. In this tutorial, you will learn how to set the control as a Modal Dialog Window, how to create an Alert Dialog, and how to create a Confirmation Dialog.

Using the Modal Dialog Option

Wijmo Control Toolkit Extender Controls > C1DialogExtender > Using the Modal Dialog Window Options
> Using the Modal Dialog Option

In this section you will learn how to set the C1DialogExtender control as a Modal Dialog Window.

1. Create an ASP.NET Web application.
2. Add a standard **Panel** control to the main content of your page.
3. Insert the following markup within the **Panel** markup to create the dialog window:

```
<div>
```

```
<div>
```

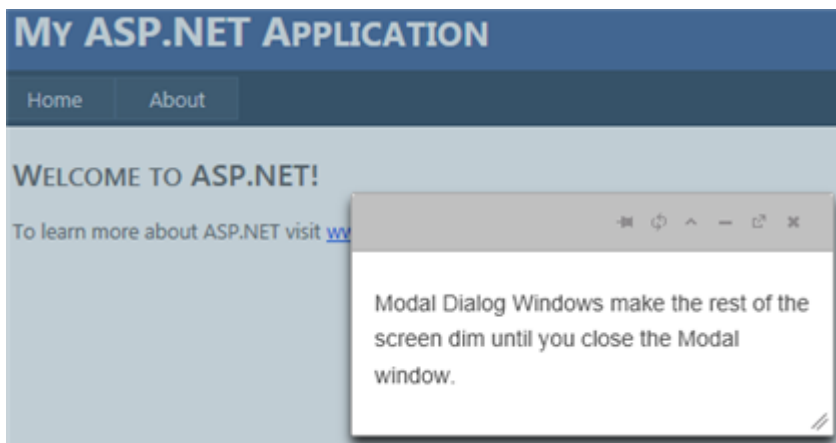

```
<p>
```

Modal Dialog Windows make the rest of the screen dim until you close the Modal window.</p>

</div>

</div>

1. Click the **Panel** smart tag and select **Add Extender** from the Tasks menu.
2. In the **Extender Wizard**, select **C1DialogExtender** and click **OK**. A C1DialogExtender control is added to the page and the **TargetControlID** is set to **Panel1**.
3. Select **View | Properties Window** in the Visual Studio menu.
4. Click the drop-down list at the top of the Properties window and select **Panel1_C1DialogExtender**.
5. Set the C1DialogExtender.Modal property to **True**.
6. Press **F5** to run the application to view the Modal Dialog Window. It should look like the following image:

Using the Alert Dialog Option

Wijmo Control Toolkit Extender Controls > C1DialogExtender > Using the Modal Dialog Window Options
> Using the Alert Dialog Option

To create a Modal Alert dialog box, complete the following:

1. Create an ASP.NET Web application.
2. Add a standard **Panel** control to the main content of your page.
3. Insert the following markup within the Panel markup to create the dialog window:

```
<div>
```

```
    <div id="dialog-message" title="Download  
complete">
```

```
        <p>
```

```
            <span class="ui-icon ui-icon-circle-  
check"></span>Your files have uploaded successfully!
```

```
</p>

</div>

</div>
```

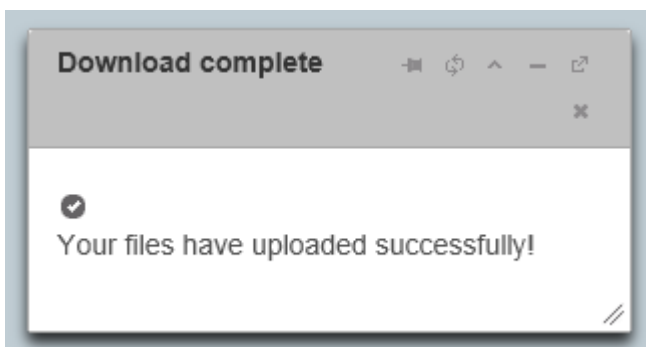

4. Click the **Panel** smart tag and select **Add Extender** from the Tasks menu.
5. In the **Extender Wizard**, select **C1DialogExtender** and click **OK**. A **C1DialogExtender** control is added to the page and the **TargetControlID** is set to Panel1.
6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1_C1DialogExtender**.
8. Set the C1DialogExtender.Modal property to **True**.
9. Set the C1DialogExtender.Title property to Download complete. Your markup should look similar to this:

```
<cc1:C1DialogExtender ID="Panel1_C1DialogExtender"
runat="server"

        CloseOnEscape="False" Show="blind"
        TargetControlID="Panel1" Modal="True" Title="Download
        complete">

</cc1:C1DialogExtender>
```

10. Run your application to see the Alert Window. It should resemble the following image:

Using the Confirm Dialog Option

Wijmo Control Toolkit Extender Controls > C1DialogExtender > Using the Modal Dialog Window Options
> Using the Confirm Dialog Option

The C1DialogExtender control allows you to create Confirm windows to confirm events like file deletion or emptying the recycle bin.

To create a Confirm dialog window, complete the following:

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.

3. Insert the following markup within the Panel markup to create the dialog window:

```
<div>

    <input type="button" value="Show Confirm"
onclick="$('#dialog-confirm').wijdialog('open')" />

    <div id="dialog-confirm" title="Empty recycle
bin?">

        <p>

            <span class="ui-icon ui-icon-
alert"></span>These items will be permanently deleted

            and cannot be recovered. Are you sure?</p>

        </div>

    </div>
```

4. Click the Panel smart tag and select **Add Extender** from the Tasks menu.
5. In the **Extender Wizard**, select C1DialogExtender and click **OK**. A C1DialogExtender control is added to the page and the **TargetControlID** is set to **Panel1**.
6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1_C1DialogExtender**.
8. Set the C1DialogExtender.Modal property to **True**.
9. Add the following markup within the <cc1:C1DialogExtender> tags to create a **Delete** and **Cancel** button in the dialog window, so the markup looks like the following:

```
<cc1:C1DialogExtender ID="Panel1_C1DialogExtender" runat="server"

    CloseOnEscape="False" Show="blind" TargetControlID="Panel1" Modal="True">

    <ExpandingAnimation Duration="400">

</ExpandingAnimation>

    <Buttons>

        <cc1:DialogButton OnClientClick="delClick" Text="Delete" />

        <cc1:DialogButton OnClientClick="cancelClick" Text="Cancel" />

    </Buttons>

    <CaptionButtons>

        <Pin Visible="false" />
```

```

        <Refresh Visible="False" />

        <Toggle Visible="False" />

        <Minimize Visible="False" />

        <Maximize Visible="False" />

    </CaptionButtons>

    <CollapsingAnimation Duration="300" />

</cc1:C1DialogExtender>

```

10. Insert the following script within the <asp:Content> tags to close the dialog window when either of the buttons is clicked:

```

<asp:Content ID="HeaderContent" runat="server"
ContentPlaceHolderID="HeadContent" >

    <script type="text/javascript">

        function delClick() {

            $(this).wijdialog("close");

        }

        function cancelClick() {

            $(this).wijdialog("close");

        }

    </script>

</asp:Content>

```

11. Run your application to see the **Confirm Window**. It should resemble the following image:

Animating the Dialog Window

Wijmo Control Toolkit Extender Controls > C1DialogExtender > Animating the Dialog Window

The C1DialogExtender control supports animation. You can control animation when the dialog window is hidden, expanded, collapsed, or opened.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Insert the following markup within the Panel markup to create the dialog window:

```
<h2>
```

```
Dialog</h2>
```

```
<br />
```

```
<span>This is the default dialog which is useful for displaying information. The  
dialog window can be moved, resized and closed with the 'x' icon.</span>
```

4. Click the Panel smart tag and select Add Extender from the Tasks menu.
5. In the **Extender Wizard**, select **C1DialogExtender** and click **OK**. A C1DialogExtender control is added to the page and the TargetControlID is set to Panel1.
6. Select **View | Properties** Window in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1_C1DialogExtender**.
8. Set the C1DialogExtender.Show property to bounce.
9. Set the C1DialogExtender.Hide property to slide.
10. Expand the **CollapsingAnimation | Animated** property and set the **Effect** property to **Fade**.
11. Expand the **ExpandingAnimation | Animated** property and set the **Effect** property to **Explode**.

Your markup should look similar to this:

```
<cc1:C1DialogExtender ID="Panel1_C1DialogExtender" runat="server"
```

```
CloseOnEscape="False" Hide="slide" Show="bounce" TargetControlID="Panel1">
```

```
<CollapsingAnimation>
```

```
<Animated Effect="fade" />
```

```
</CollapsingAnimation>
```

```
<ExpandingAnimation>
```

```
<Animated Effect="explode" />
```

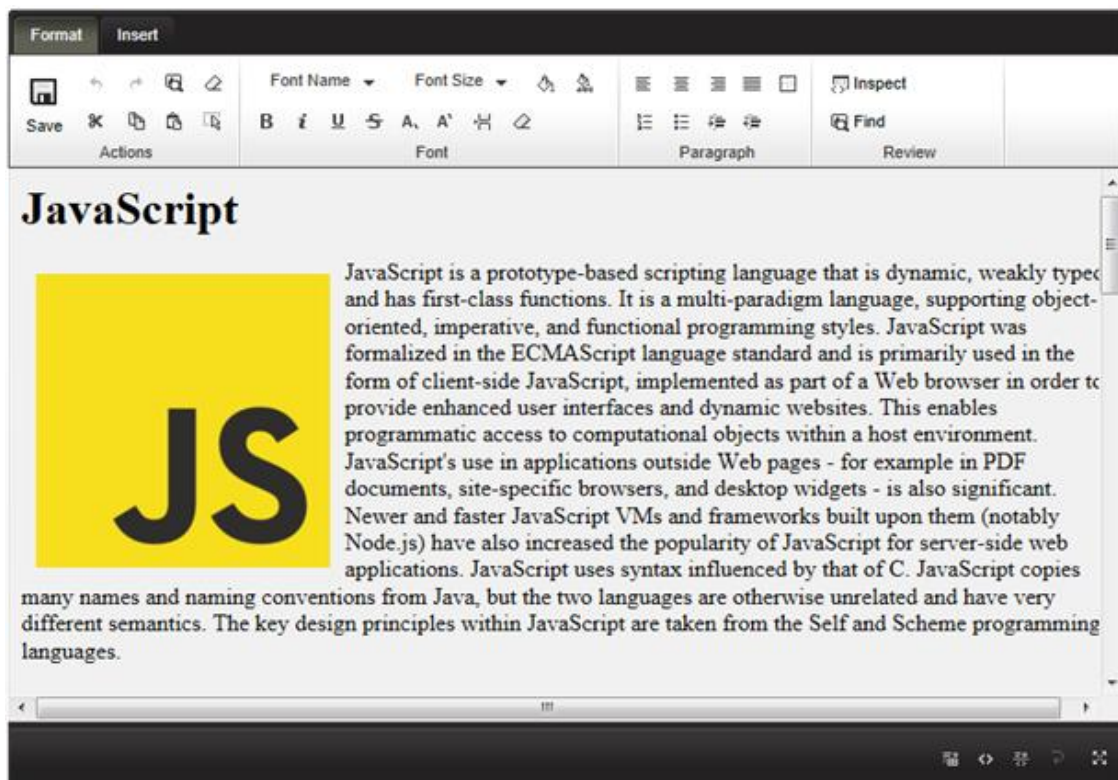

```
</ExpandingAnimation>
```

```
</cc1:C1DialogExtender>
```

12. Run the application and minimize/maximize, close, and open the dialog window to see the animation effects.

C1EditorExtender

Replace any text box with this intuitive Microsoft Word-like editor that allows you to edit your HTML content in your preferred style: design, source code, or split view.

C1EditorExtender Markup

The following markup creates a C1EditorExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1EditorExtender ID="TextBox1_C1EditorExtender" runat="server"

    FontNames="Arial,Courier New,Garamond,Tahoma,Times New
Roman,Verdana,Wingdings"

    FontSizes="VerySmall,Smaller,Small,Medium,Large,Larger,VeryLarge"

SimpleModeCommands="Bold,Italic,Link,BlockQuote,StrikeThrough,InsertDate,InsertImage,Num
beredList,BulletedList,InsertCode"

    TargetControlID="TextBox1">

</cc1:C1EditorExtender>
```

C1EditorExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1EditorExtender > C1EditorExtender Tutorial

This tutorial demonstrates how to attach the C1EditorExtender control to a **TextBox** control and customize the editor.

Step 1 of 3: Adding a C1EditorExtender to the Page

Step 2 of 3: Customizing the Editor

Step 3 of 3: Running the Editor Project

Step 1 of 3: Adding a C1EditorExtender to the Page

Wijmo Control Toolkit Extender Controls > C1EditorExtender > C1EditorExtender Tutorial > Step 1 of 3: Adding a C1EditorExtender to the Page

This tutorial demonstrates how to attach the C1EditorExtender to a **TextBox** control, allowing users to edit text within the editor.

1. In your Web application, add a standard **TextBox** control to the main content of your page.
2. Click the TextBox smart tag and select **Add Extender** from the Tasks menu.
3. In the Extender Wizard, select **C1EditorExtender** and click **OK**. A **C1EditorExtender** control is added to the page and the TargetControlID is set to TextBox1.

```
<cc1:C1EditorExtender ID="TextBox1_C1EditorExtender" runat="server"
```

```
FontNames="Arial,Courier New,Garamond,Tahoma,Times New
Roman,Verdana,Wingdings"
```

```
FontSizes="VerySmall,Smaller,Small,Medium,Large,Larger,VeryLarge"
```

```
SimpleModeCommands="Bold,Italic,Link,BlockQuote,StrikeThrough,InsertDate,InsertImage,Num
beredList,BulletedList,InsertCode"
```

```
TargetControlID="TextBox1">
```

```
</cc1:C1EditorExtender>
```

In the next step you will set some of the extender properties.

Step 2 of 3: Customizing the Editor

Wijmo Control Toolkit Extender Controls > C1EditorExtender > C1EditorExtender Tutorial > Step 2 of 3: Customizing the Editor

In this topic you will add some text to the **TextBox** and set some of the properties for the C1EditorExtender. You will change the view to **Split** view and show a simpler version of the editing ribbon.

1. Resize the **TextBox** to make it larger, set the **TextMode** property to **MultiLine**, and enter some content. For example, use the following XAML markup:

```
<asp:TextBox ID="TextBox1" runat="server" Width="760" Height="530"
TextMode="MultiLine">
```

```
<h1>
```

```
JavaScript</h1>
```

```
<p>
```

```

```

JavaScript is a prototype-based scripting language that is dynamic, weakly typed and has first-class functions. It is a multi-paradigm language, supporting object-oriented, imperative, and functional programming styles. JavaScript was formalized in the ECMAScript language standard and is primarily used in the form of client-side JavaScript, implemented as part of a Web browser in order to provide enhanced user interfaces and dynamic websites. This enables programmatic access to computational objects within a host environment. JavaScript's use in applications outside Web pages - for example in PDF documents, site-specific browsers, and desktop widgets - is also significant. Newer and faster JavaScript VMs and frameworks built upon them (notably Node.js) have also increased the popularity of JavaScript for server-side web

applications. JavaScript uses syntax influenced by that of C. JavaScript copies many names and naming conventions from Java, but the two languages are otherwise unrelated and have very different semantics. The key design principles within JavaScript are taken from the Self and Scheme programming languages.

<h2>

History

</h2>

<p>

JavaScript was originally developed by Brendan Eich of Netscape under the name Mocha, which was later renamed to LiveScript, and finally to JavaScript. LiveScript was the official name for the language when it first shipped in beta releases of Netscape Navigator 2.0 in September 1995, but it was renamed JavaScript in a joint announcement with Sun Microsystems on December 4, 1995, when it was deployed in the Netscape browser version 2.0B3.

</p>

<p>

The change of name from LiveScript to JavaScript roughly coincided with Netscape adding support for Java technology in its Netscape Navigator web browser. The final choice of name caused confusion, giving the impression that the language was a spin-off of the Java programming language, and the choice has been characterized by many as a marketing ploy by Netscape to give JavaScript the cachet of what was then the hot new web-programming language. It has also been claimed that the language's name is the result of a co-marketing deal between Netscape and Sun, in exchange for Netscape bundling Sun's Java runtime with its then-dominant browser.

</p>

<p>

JavaScript very quickly gained widespread success as a client-side scripting language for web pages. As a consequence, Microsoft named its implementation JScript to avoid trademark issues. JScript added new date methods to fix the Y2K-problematic methods in JavaScript, which were based on Java's java.util.Date class. JScript was included in Internet Explorer 3.0, released in August 1996.

</p>

</asp:TextBox>

2. Select **View | Properties Window** in the Visual Studio menu.
3. Click the drop-down list at the top of the Properties window and select **TextBox1_C1EditorExtender**.
4. Set the C1EditorExtender.EditorMode property to **Split**.

5. Set the C1EditorExtender.Mode property to **Simple**.
6. Now run the project to see the editor.

Step 3 of 3: Running the Editor Project

Wijmo Control Toolkit Extender Controls > C1EditorExtender > C1EditorExtender Tutorial > Step 3 of 3: Running the Editor Project

Press **F5** to run the project and view the editor. Notice the simple ribbon with fewer buttons for editing as well as the split view that shows both the designer and code.

Using the Simple Editor Toolbar

Wijmo Control Toolkit Extender Controls > C1EditorExtender > Using the Simple Editor Toolbar

The C1EditorExtender control supports a simplified version of its editing toolbar, which provides these buttons: *Bold*, *Italic*, *Link*, *Block Quote*, *Strikethrough*, *Insert Date Time*, *Image Browser*, *Numbered List*, *Bulleted List*, and *Insert Code*.

1. Simply set the mode property to "Simple" to take advantage of this feature.

```
<c1:C1EditorExtender ID="EditorExtender1" runat="server"
    TargetControlID="TextBox1" Mode="Simple"/>
```

2. Create an ASP.NET Web application.

3. Add a standard TextBox control to the main content of your page.
4. Resize the TextBox to make it larger, set the TextMode property to MultiLine, and enter some content. For example, use the following XAML markup:

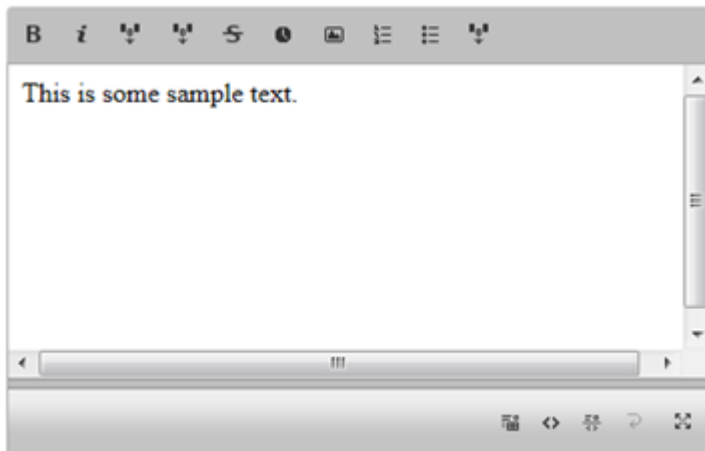

```
<asp:TextBox ID="TextBox1" runat="server" Height="264px"
TextMode="MultiLine" Width="415px">This is some sample text.
</asp:TextBox>
```

5. Click the TextBox smart tag and select Add Extender from the Tasks menu.
6. In the Extender Wizard, select C1EditorExtender and click OK. A C1EditorExtender control is added to the page and the **TargetControlID** is set to **TextBox1**.
7. Select **View | Properties Window** in the Visual Studio menu.
8. Click the drop-down list at the top of the Properties window and select **TextBox1_C1EditorExtender**.
9. Set the C1EditorExtender.Mode property to **Simple**. Your markup should look similar to this:

```
<cc1:C1EditorExtender ID="TextBox1_C1EditorExtender"
runat="server" TargetControlID="TextBox1" Mode="Simple">

</cc1:C1EditorExtender>
```

10. Press F5 to run the application. Select text and format using the simple toolbar.

Using BBCode with C1EditorExtender

Wijmo Control Toolkit Extender Controls > C1EditorExtender > Using BBCode with C1EditorExtender

The C1EditorExtender control supports **BBCode**, or **Bulletin Board Code**, which is a markup language used to format posts in message boards. Simply set the **Mode** property to take advantage of this feature.

```
<cc1:C1EditorExtender ID="EditorExtender1" runat="server" TargetControlID="TextBox1"
Mode="Bbcode" />
```

1. Create an ASP.NET Web application.

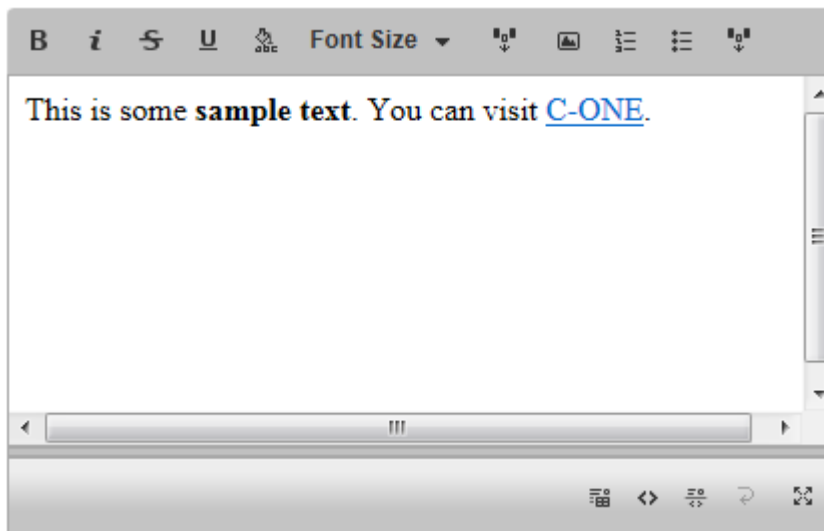

2. Add a standard TextBox control to the main content of your page.
3. Resize the TextBox to make it larger, set the TextMode property to MultiLine, and enter some content. For example, use the following XAML markup:

```
<asp:TextBox ID="TextBox1" runat="server" Height="264px" TextMode="MultiLine"
Width="415px">This is some [B]sample text[/B]. You can visit
[URL=http://componentone.com/]C-ONE[/URL].</asp:TextBox>
```

4. Click the TextBox smart tag and select **Add Extender** from the **Tasks** menu.
5. In the **Extender Wizard**, select **C1EditorExtender** and click **OK**. A C1EditorExtender control is added to the page and the **TargetControlID** is set to **TextBox1**.
6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **TextBox1_C1EditorExtender**.
8. Set the C1EditorExtender.Mode property to **Bbcode**. Your markup should look similar to this:

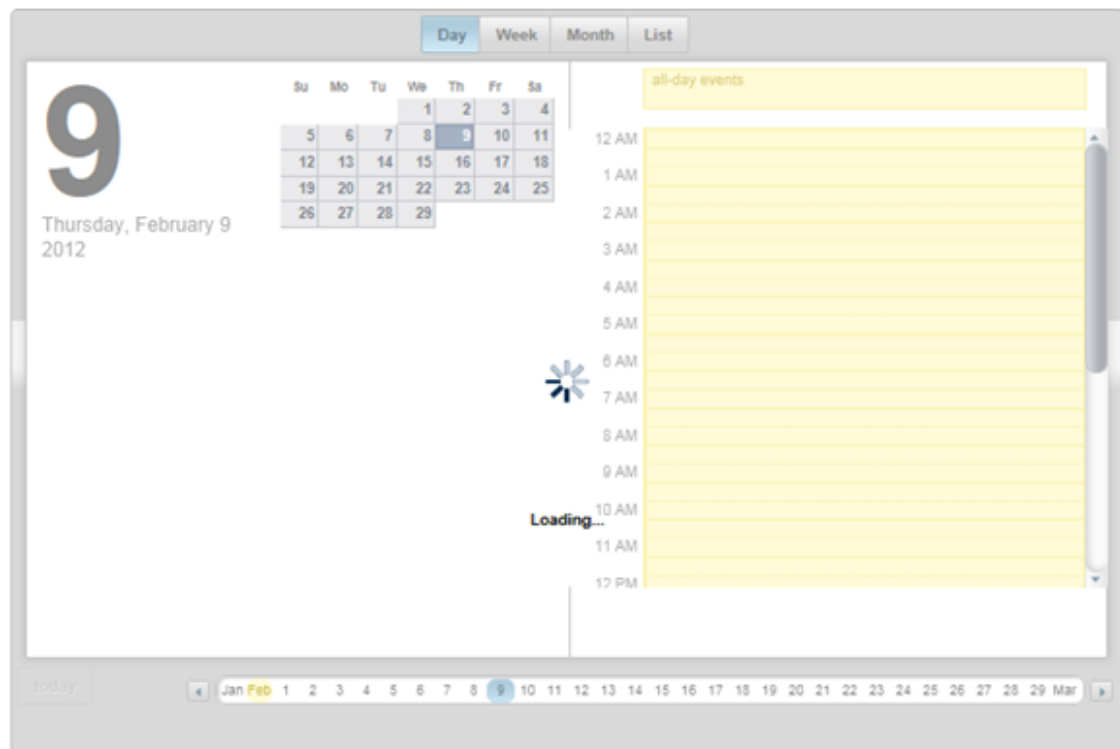

```
<cc1:C1EditorExtender ID="EditorExtender1" runat="server" TargetControlID="TextBox1"
Mode="Bbcode" />
```

9. Press **F5** to run the application. The editor displays the **BBCode** formatted content.

C1EventsCalendarExtender

Events Calendar is a fully functional schedule that allows users to add, edit, and manage their appointments. By default, the Events Calendar uses an offline data source, so you can easily add this extender control to your page without additional configuration.

C1EventsCalendarExtender Markup

The following markup creates a C1EventsCalendarExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1EventsCalendarExtender ID="Panel1_C1EventsCalendarExtender"
    runat="server" Colors="red,darkorchid,green,blue,cornflowerblue,yellow,bronze"
    SelectedDate="2012-02-09" TargetControlID="Panel1"
    VisibleCalendars="Default,Home,Work">

</cc1:C1EventsCalendarExtender>
```

C1EventsCalendarExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > C1EventsCalendarExtender Tutorial

This tutorial demonstrates how to attach the C1EventsCalendarExtender control to a **Panel** control and customize the calendar.

See Also

Step 1 of 3: Adding a C1EventsCalendarExtender to the Page

Step 2 of 3: Customizing the Calendar

Step 3 of 3: Running the Project

Step 1 of 3: Adding a C1EventsCalendarExtender to the Page

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > C1EventsCalendarExtender Tutorial > Step 1 of 3: Adding a C1EventsCalendarExtender to the Page

This tutorial demonstrates how to attach the C1EventsCalendarExtender to a **Panel** control, allowing users add events to the calendar.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Tasks** menu.
3. In the **Extender Wizard**, select C1EventsCalendarExtender and click **OK**. A C1EventsCalendarExtender control is added to the page and the **TargetControlID** is set to TextBox1.

```
<cc1:C1EventsCalendarExtender ID="Panel1_C1EventsCalendarExtender"
    runat="server" Colors="red,darkorchid,green,blue,cornflowerblue,yellow,bronze"
    SelectedDate="2012-02-09" TargetControlID="Panel1"
    VisibleCalendars="Default,Home,Work">

</cc1:C1EventsCalendarExtender>
```

In the next step you will set some of the extender properties.

Step 2 of 3: Customizing the Calendar

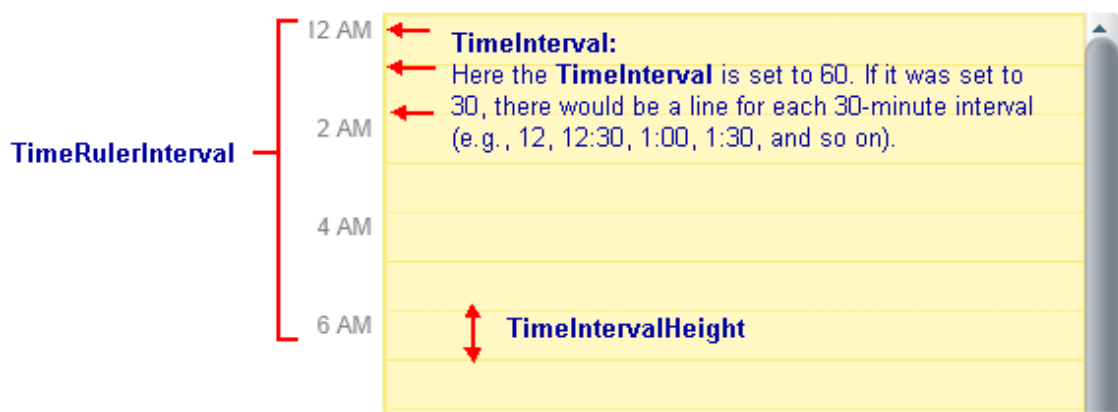

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > C1EventsCalendarExtender Tutorial > Step 2 of 3: Customizing the Calendar

In this topic you will set some of the properties for the C1EventsCalendarExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1EventsCalendarExtender**.
3. Click the drop-down arrow next to the C1EventsCalendarExtender.SelectedDate property and select **12/21/2012**.
4. Set the following properties to the specified values:

Property	Value	Description
TimeInterval	60	This property specifies the time interval for the Day view, in minutes.
TimeIntervalHeight	25	This property specifies the Day view time interval row height, in pixels.
TimeRulerInterval	120	This property specifies the time ruler interval for the Day view, in minutes.

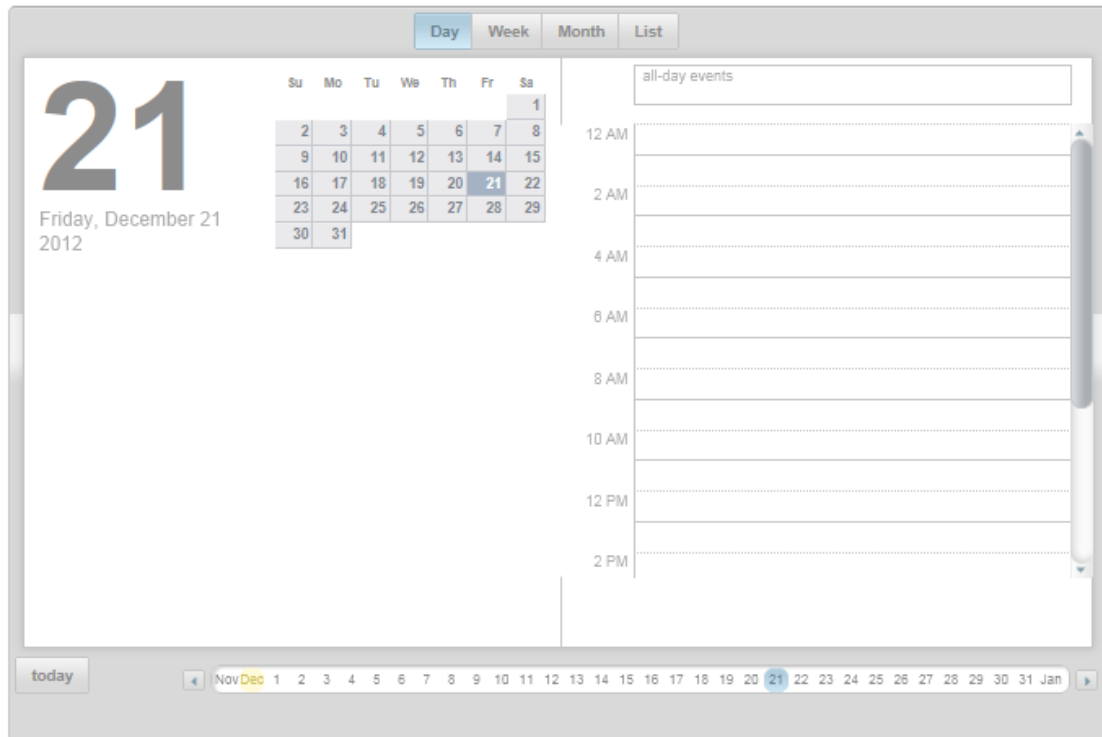

Now run the project to see the events calendar.

Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > C1EventsCalendarExtender
Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the events calendar. The date shown is 12/21/2012 and notice the time intervals you specified.

Changing the Start Date of the Events Calendar

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > Changing the Start Date of the Events Calendar

By default, the *Day* view of the C1EventsCalendarExtender starts with the current date. You can change the date using the C1EventsCalendarExtender.SelectedDate property.

Changing the Start Date in Design View

To change the start date in Design view, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1EventsCalendarExtender**.
3. Click the drop-down arrow next to the C1EventsCalendarExtender.SelectedDate property.
4. Select a date from the calendar.

Changing the Start Date in Source View

To change the start date in Source view, add `SelectedDate="xxxx-xx-xx"` where the x's represent the numbers of the date, to the `<cc1:C1EventsCalendarExtender>` tag. Once you've set this property, your markup will resemble the following:

```
<cc1:C1EventsCalendarExtender ID="Panel1_C1EventsCalendarExtender"
    runat="server" Colors="red,darkorchid,green,blue,cornflowerblue,yellow,bronze"
    SelectedDate="2012-12-21" TargetControlID="Panel1"
    VisibleCalendars="Default,Home,Work">

</cc1:C1EventsCalendarExtender>
```

Changing Data View of the Events Calendar

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > Changing Data View of the Events Calendar

You can change the data view of an events calendar at design time using the Properties window, in Source view, and in Code. You can change the view using the `C1EventsCalendarExtender.ViewType` property.

Changing the Calendar View in Design View

To change the calendar view in Design view, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1EventsCalendarExtender**.
3. Click the drop-down arrow next to the `C1EventsCalendarExtender.ViewType` property.
4. Select **Day**, **Week**, **Month**, or **List**, depending on the view you want for the calendar.

Changing the Calendar View in Source View

To change the calendar view to *Month*, for example, in Source view, add `ViewType="Month"` to the `<cc1:C1EventsCalendarExtender>` tag. Once you've set this property, your markup will resemble the following::

```
<cc1:C1EventsCalendarExtender ID="Panel1_C1EventsCalendarExtender"
    runat="server" Colors="red,darkorchid,green,blue,cornflowerblue,yellow,bronze"
    SelectedDate="2012-02-09" TargetControlID="Panel1"
    VisibleCalendars="Default,Home,Work" ViewType="Month">

</cc1:C1EventsCalendarExtender>
```

Changing the Calendar View in Code

Add the following code to the **Page_Load** event to set the calendar's `C1EventsCalendarExtender.ViewType` to **Month**:

Visual Basic	Copy Code
<pre>Panel1_C1EventsCalendar1.ViewType = C1.Web.Wijmo.Extenders.C1EventsCalendar.C1EventsCalendarViewType.Month</pre>	

C#	Copy Code
<pre>Panel1_C1EventsCalendar1.ViewType = C1.Web.Wijmo.Extenders.C1EventsCalendar.C1EventsCalendarViewType.Month;</pre>	

Hiding the Events Calendar Header Bar

Wijmo Control Toolkit Extender Controls > `C1EventsCalendarExtender` > Hiding the Events Calendar Header Bar

By default the **`C1EventsCalendarExtender`** control displays a header bar at the top of the control. The Header bar contains tabs for the calendar views, allowing you to change the current view at run time. You can disable the Header bar by setting the `C1EventsCalendarExtender.HeaderBarVisible` property to **False**.

Hiding the Header Bar in Design View

To hide the Header bar at design time, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1EventsCalendarExtender**.
3. Click the drop-down arrow next to the `C1EventsCalendarExtender.HeaderBarVisible` property and select **False**.

Hiding the Header Bar in Source View

To hide the Header bar in Source view, add `HeaderBarVisible="False"` to the `<cc1:C1EventsCalendarExtender>` tag. Once you've set this property, your markup will resemble the following:

```
<cc1:C1EventsCalendarExtender ID="Panel1_C1EventsCalendarExtender"
```

```
runat="server" Colors="red,darkorchid,green,blue,cornflowerblue,yellow,bronze"
```

```
SelectedDate="2012-02-09" TargetControlID="Panel1"
```

```
VisibleCalendars="Default,Home,Work" HeaderBarVisible="False">
```

```
</cc1:C1EventsCalendarExtender>
```

Hiding the Header Bar in Code

To hide the Header bar programmatically, add the following code into the **Page_Load** event:

Visual Basic	Copy Code
Panel1_C1EventsCalendarExtender.HeaderBarVisible = False	

C#	Copy Code
Panel1_C1EventsCalendarExtender.HeaderBarVisible = false;	

Hiding the Events Calendar Navigation Bar

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > Hiding the Events Calendar Navigation Bar

By default the C1EventsCalendarExtender control displays a navigation bar at the bottom of the control. The navigation bar notes the selected date and lets the user navigate to previous or following dates or months at run time. You can disable the navigation bar by setting the C1EventsCalendarExtender.NavigationBarVisible property to **False**.

Hiding the Navigation Bar in Design View

To hide the navigation bar at design time, complete the following steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1EventsCalendarExtender**.
3. Click the drop-down arrow next to the C1EventsCalendarExtender.NavigationBarVisible property and select **False**.

Hiding the Navigation Bar in Source View

To hide the navigation bar in Source view, add `NavigationBarVisible="False"` to the `<cc1:C1EventsCalendarExtender>` tag. Once you've set this property, your markup will resemble the following:

```
<cc1:C1EventsCalendarExtender ID="Panel1_C1EventsCalendarExtender"
    runat="server" Colors="red,darkorchid,green,blue,cornflowerblue,yellow,bronze"
    SelectedDate="2012-02-09" TargetControlID="Panel1"
    VisibleCalendars="Default,Home,Work" NavigationBarVisible="False">
</cc1:C1EventsCalendarExtender>
```

Hiding the Navigation Bar in Code

To hide the navigation bar programmatically, add the following code in the **Page_Load** event:

Visual Basic	Copy Code
Panel1_C1EventsCalendarExtender.NavigationBarVisible = False	

C#	Copy Code
Panel1_C1EventsCalendarExtender.NavigationBarVisible = false;	

Changing the Culture of a Schedule

Wijmo Control Toolkit Extender Controls > C1EventsCalendarExtender > Changing the Culture of a Schedule

Each culture has different conventions and formats for displaying dates, time, numbers, and other information. This topic illustrates several different ways to set the culture of a C1EventsCalendarExtender using the C1EventsCalendarExtender.Culture property.

Setting the Culture in Design View

To set the culture of a C1EventsCalendarExtender control, complete the following steps:

1. Right-click the **C1EventsCalendarExtender** control and then click **Show Smart Tag** to view the **C1EventsCalendar Tasks** menu.
2. Click the drop-down arrow next to the **Culture** item.
3. Select a culture from the list, for example **ja-JP**. Your C1EventsCalendarExtender now uses the specified culture format, in this example, Japanese.

Setting the Culture in Source View

To set the culture in Source view, add Culture="ja-JP" to the <cc1:C1EventsCalendarExtender> tag. Once you've set this property, your markup will resemble the following:

```
<cc1:C1EventsCalendarExtender ID="Panel1_C1EventsCalendarExtender"
    runat="server" Colors="red,darkorchid,green,blue,cornflowerblue,yellow,bronze"
    TargetControlID="Panel1" VisibleCalendars="Default,Home,Work" Culture="ja-JP">
</cc1:C1EventsCalendarExtender>
```

Setting the Culture Programmatically

To set the culture programmatically, add the following code into the **Page_Load** event:

Visual Basic	Copy Code
Panel1_C1EventsCalendarExtender.Culture = new System.Globalization.CultureInfo("ja-JP")	

C#	Copy Code
Panel1_C1EventsCalendarExtender.Culture = new System.Globalization.CultureInfo("ja-JP");	

C1Expander Extender

The C1ExpanderExtender control allows you to show or hide embedded or external content within an expanding panel using various animation effects. The expanding content can be shown or hidden by clicking on the expander header at run time.

C1ExpanderExtender Markup

The following markup creates a C1ExpanderExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1ExpanderExtender ID="Panel1_C1ExpanderExtender" runat="server"
    TargetControlID="Panel1">

</cc1:C1ExpanderExtender>
```

C1Expander Extender Tutorial

Wijmo Control Toolkit Extender Controls > C1Expander Extender > C1Expander Extender Tutorial

This tutorial demonstrates how to attach the C1ExpanderExtender control to a **Panel** control and customize the dialog box by setting the extender properties.

See Also

Step 1 of 4: Creating Expanding Content

Step 2 of 4: Adding C1Expander Extender to the Page

Step 3 of 4: Customizing Expanding Text

Step 4 of 4: Running the Project

Step 1 of 4: Creating Expanding Content

Wijmo Control Toolkit Extender Controls > C1Expander Extender > C1Expander Extender Tutorial > Step 1 of 4: Creating Expanding Content

In this topic you will add some content to a **Panel** control which will later become expanding text.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Add some content for the expanding panel and header. For example:

```
<asp:Panel ID="Panel1" runat="server">

    <h3>Header</h3>

    <div>
```

Vestibulum ut eros non enim commodo hendrerit. Donec porttitor tellus non magna.

Nam ligula elit, pretium et, rutrum non, hendrerit id, ante. Nunc mauris sapien, cursus in.

</div>

</asp:Panel>

In the next step, you will add a C1ExpanderExtender to the page.

Step 2 of 4: Adding C1Expander Extender to the Page

Wijmo Control Toolkit Extender Controls > C1Expander Extender > C1Expander Extender Tutorial > Step 2 of 4: Adding C1Expander Extender to the Page

In this step, you will add a **C1ExpanderExtender** control to associate with the **Panel** to create the expanding text.

1. In Design view, select the Panel, click the smart tag, and select **Add Extender** from the **Panel Tasks** menu.
2. In the **Extender Wizard**, select C1ExpanderExtender and click **OK**. The TargetControlID is automatically set to Panel1.

```
<cc1:C1ExpanderExtender ID="Panel1_C1ExpanderExtender" runat="server"
```

```
    TargetControlID="Panel1">
```

```
</cc1:C1ExpanderExtender>
```

Now you can begin setting properties for the C1ExpanderExtender to format the expanding text.

Step 3 of 4: Customizing Expanding Text

Wijmo Control Toolkit Extender Controls > C1Expander Extender > C1Expander Extender Tutorial > Step 3 of 4: Customizing Expanding Text

In this topic you will set some of the properties for the C1ExpanderExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1ExpanderExtender**.
3. Set the C1ExpanderExtender.Expanded property to False. The text will be collapsed when the web page is initially viewed.
4. Click the node to expand the **Animated** property. Set the **Disable** property to **False** and set the **Effect** property to bounce.

The markup for the C1ExpanderExtender will now look like this:

```
<cc1:C1ExpanderExtender ID="Panel1_C1ExpanderExtender" runat="server"
TargetControlID="Panel1" Theme="rocket" Animated-Effect="bounce" Expanded="False">

</cc1:C1ExpanderExtender>
```

5. Now run the project to see the formatted expanding text.

Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1Expander Extender > C1Expander Extender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- Notice the expanding text is collapsed.
- Click the **HEADER** to expand the text and notice the **bounce** animation effect.

Adding Animation to the Expander

Wijmo Control Toolkit Extender Controls > C1Expander Extender > Adding Animation to the Expander

The C1ExpanderExtender supports animation effects when the extender is expanded and collapsed. You can enable or disable animation and set a custom animation effect with the **Animated** property. In this example you'll add four expanders, one with the default animation, two with custom animations, and one with animation disabled.

Complete the following steps:

1. Create a new **ASP.NET Web Application**.
2. In the Solution Explorer, right-click the project and choose **Add Reference**. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Expander" TagPrefix="Expander" %>
```

Note that you may need to edit the above depending on the assembly you are using.

And add the following markup within the main <div> tag to add four **Panel** controls and set the expander extenders:

```
<h4>Default expander animation</h4>
```

```
<asp:Panel ID="Panel1" runat="server">
```

```
    <h3>Header</h3>
```

```
    <div>Vestibulum ut eros non enim commodo hendrerit. Donec porttitor tellus non magna.
    Nam ligula elit, pretium et, rutrum non, hendrerit id, ante. Nunc mauris sapien, cursus in.</div>
```

```
</asp:Panel>
```

```
<Expander:C1ExpanderExtender ID="Panel1_ExpanderExtender" runat="server"
TargetControlID="Panel1">
```

```
</Expander:C1ExpanderExtender>
```

```
<h4>Custom expander animation</h4>
```

```
<asp:Panel ID="Panel2" runat="server">
```

```
    <div>Header</div>
```

```
    <div>Vestibulum ut eros non enim commodo hendrerit. Donec porttitor tellus non magna.
    Nam ligula elit, pretium et, rutrum non, hendrerit id, ante. Nunc mauris sapien, cursus in.</div>
```

```
</asp:Panel>
```

```
<Expander:C1ExpanderExtender ID="ExpanderExtender2" runat="server"
TargetControlID="Panel2" Animated-Effect="custom1"
Expanded="false"> </Expander:C1ExpanderExtender>
```

```
<h4>Custom animation using jQuery effects</h4>
```

```
<asp:Panel ID="Panel3" runat="server">
```

```
    <div>Header</div>
```

```
    <div>Vestibulum ut eros non enim commodo hendrerit. Donec porttitor tellus non magna.
    Nam ligula elit, pretium et, rutrum non, hendrerit id, ante. Nunc mauris sapien, cursus in.</div>
```

```
</asp:Panel>
```

```
<Expander:C1ExpanderExtender ID="ExpanderExtender3" runat="server"
TargetControlID="Panel3" Animated-Effect="custom2"> </Expander:C1ExpanderExtender>
```

```
<h4>Disabled animation</h4>
```

```
<asp:Panel ID="Panel4" runat="server">
```

```
<div>Header</div>
```

```
<div>Vestibulum ut eros non enim commodo hendrerit. Donec porttitor tellus non magna.  
Nam ligula elit, pretium et, rutrum non, hendrerit id, ante. Nunc mauris sapien, cursus in.</div>
```

```
</asp:Panel>
```

```
<Expander:C1ExpanderExtender ID="ExpanderExtender4" runat="server"  
TargetControlID="Panel4" Animated-Disabled="true"></Expander:C1ExpanderExtender>
```

The first expander uses the default animation, the second and third use custom animation effects, and the last has animation disabled (with **Animated-Disabled** set to **True**). In the next step you'll add script for the custom animation effects.

4. Add the following script to set the custom animation effects for the second and third expanders:

```
<script id="scriptInit" type="text/javascript">  
  
$(document).ready(function () {  
  
    jQuery.wijmo.wijexpander.animations.custom1 = function (options) {  
  
        this.slide(options, {  
  
            easing: "easeOutExpo",  
  
            duration: 900  
  
        });  
  
    }  
  
    jQuery.wijmo.wijexpander.animations.custom2 = function (options) {  
  
        if (options.expand)  
  
            options.content.show("puff", options, 300);  
  
        else  
  
            options.content.hide("explode", options, 300);  
  
    }  
  
    });  
  
</script>
```

One custom animation uses an easing effect animation, the other uses jQuery animation.

What You've Accomplished

- Press **F5** to run your application and click on each expanders header to view the animation effects. Observe that :
- The first expander demonstrates default expand/collapse animation effect.
- The second expander demonstrates custom animation (custom1) with "easeOutExpo" easing and duration of 900ms.
- The third expander demonstrates custom animation(custom2) using jQuery effects. The "puff" effect is used for expand animation and "explode" for the collapse animation.
- For the fourth expander the animation is disabled with the Animated-Disabled property set to True.

Displaying External Content in the Expander

Wijmo Control Toolkit Extender Controls > C1Expander Extender > Displaying External Content in the Expander

The C1ExpanderExtender supports displaying external content. For example, you can display a Web site within the content area of the expander extender. In this example, you'll display the ComponentOne Web site within an expander by setting the **ContentUrl** property.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Expander" TagPrefix="Expander" %>
```

4. Note that you may need to edit the above depending on the assembly you are using.
5. And add the following markup within the main <div> tag to add a Panel control and set the expander extender:

```
<asp:Panel ID="Panel1" runat="server">

    <h3>componentone.com (click to collapse/expand)</h3>

    <div>

    </div>

</asp:Panel>

<Expander:C1ExpanderExtender ID="Panel1_ExpanderExtender" runat="server"
TargetControlID="Panel1" ContentUrl="http://www.componentone.com/">
```

```
</Expander:C1ExpanderExtender>
```

Note that the **ContentUrl** property is set to display a Web site.

What You've Accomplished

Press **F5** to run your application and notice that the ComponentOne Web site is displayed inside the expander extender. Note that you can interact with the Web site at run time within the expander.

Setting the Expand Direction at Run Time

Wijmo Control Toolkit Extender Controls > C1Expander Extender > Setting the Expand Direction at Run Time

By default, the C1ExpanderExtender expands downward when the header is clicked. You can customize the expand direction with the **ExpandDirection** property. In this example you'll add an expander control and four radio buttons that can be used to set the expander's expand direction at run time.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the **Solution Explorer**, right-click the project and choose **Add Reference**. Locate and add a reference to the **C1.Web.Wijmo.Extenders** assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Expander" TagPrefix="Expander" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. And add the following markup within the main <div> tag to add a Panel control and set the expander extender:

```
<asp:Panel ID="Panel1" runat="server">
```

```
<h3>header</h3>
```

```
<div>wijexpander widget allows the user to show or hide any embedded or external content
by clicking on an expander header.</div>
```

```
</asp:Panel>
```

```
<Expander:C1ExpanderExtender ID="Panel1_ExpanderExtender" runat="server"
TargetControlID="Panel1">
```

```
</Expander:C1ExpanderExtender>
```

5. And add the following markup just below the expander markup to add four radio buttons:

```
<fieldset class="radio">
```

```
<legend>Select expand direction</legend>
```

```
<label><input type="radio" name="ExpandDirection" value="top"
onclick="setExpandDirection('top');" /> top</label>
```

```
<label><input type="radio" name="ExpandDirection" value="right"
onclick="setExpandDirection('right');" /> right</label>
```

```
<label><input type="radio" name="ExpandDirection" value="bottom"
onclick="setExpandDirection('bottom');" checked="checked" /> bottom</label>
```

```
<label><input type="radio" name="ExpandDirection" value="left"
onclick="setExpandDirection('left');" /> left</label>
```

```
</fieldset>
```

6. These buttons will be used to set the expand direction at run time.
7. Add the following script to set the expand direction at run time.

```
<script type="text/javascript" language="javascript">
```

```
function setExpandDirection(direction) {
```

```
$("#<%=Panel1.ClientID%>").wijexpander("option", "expandDirection", direction);
```

```
}
```

```
</script>
```

What You've Accomplished

Press **F5** to run your application and select a radio button to change the expander's expand direction at run time. You can click the expander's header to view how the expander's expand and collapse actions have changed.

Form Decorator Extenders

The Wijmo FormDecorator extender controls are used to decorate standard HTML form elements. The FormDecorator extender controls allow any form element to be styled uniformly in any browser.

C1ButtonExtender

The C1ButtonExtender control is used to decorate a standard HTML button element.

C1ButtonExtender Markup

The following markup creates a **C1ButtonExtender** control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1ButtonExtender ID="C1ButtonExtender1" runat="server" Label="Save"
TargetControlID="Button1">
```

```
</cc1:C1ButtonExtender>
```

C1CheckboxExtender

The C1CheckboxExtender control is used to decorate a standard HTML check box element.

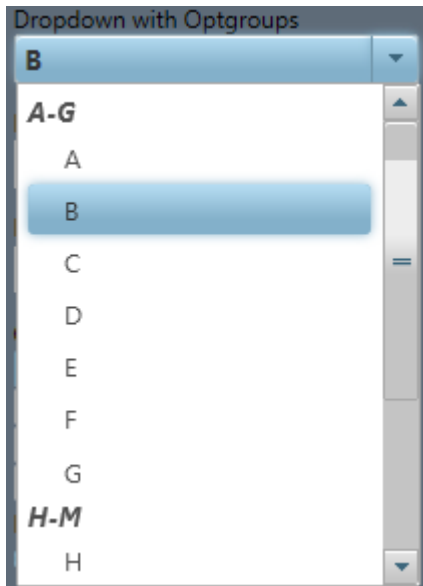

CheckboxExtender Markup

The following markup creates a **C1CheckBoxExtender** control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1CheckboxExtender ID="CheckboxExtender1" runat="server"
TargetControlID="CheckBox1" />
```

C1DropdownExtender

The C1DropdownExtender control is used to decorate a standard HTML drop-down element.

C1DropdownExtender Markup

The following markup creates a **C1DropdownExtender** control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1DropdownExtender ID="DropdownExtender1" runat="server"
    TargetControlID="DropDownList1" />
```

C1RadioExtender

The C1RadioExtender control is used to decorate a standard HTML radio button element.

C1RadioExtender Markup

The following markup creates a **C1RadioExtender** control. Set the **TargetControlID** property to attach the extender to a control.

```
<wijmo:C1RadioExtender ID="RadioExtender1" runat="server"
    TargetControlID="RadioButton1" />
```

C1TextboxExtender

The C1TextboxExtender control is used to decorate a standard HTML text box element.

C1TextboxExtender Markup

The following markup creates a **C1TextboxExtender** control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1TextboxExtender ID="TextboxExtender1" runat="server"
    TargetControlID="TextBox1" />
```

Form Decorator Extender Controls Tutorial

Wijmo Control Toolkit Extender Controls > Form Decorator Extenders > Form Decorator Extender Controls Tutorial

This tutorial demonstrates how to attach the FormDecorator extender controls to corresponding **CheckBox**, **DropDownList**, **RadioButton**, and **TextBox** controls using the **TargetControlID** and **TargetSelector** properties.

See Also

Step 1 of 3: Setting up the Project

Step 2 of 3: Adding Extender Controls to the Page

Step 3 of 3: Running the Project

Step 1 of 3: Setting up the Project

Wijmo Control Toolkit Extender Controls > Form Decorator Extenders > Form Decorator Extender Controls Tutorial > Step 1 of 3: Setting up the Project

In this step you will add a few standard HTML controls using markup.

1. First add some standard controls to your page.
2. In your Web application, add the following markup to add CheckBoxes, a DropDownList, RadioButtons, a Button, and a TextBox to the main content of your page.

```
<ul class="formdecorator">
    <li>
        <h3>TextArea</h3>
```

```

</li>

<h3>Radio</h3>

<input type="radio" name="radiobutton1" id="radio1" /> <label
for="radio1">radio1</label>

<input type="radio" name="radiobutton1" id="radio2" /> <label
for="radio2">radio2</label>

<input type="radio" name="radiobutton1" id="radio3" /> <label
for="radio3">radio3</label>

<input type="radio" name="radiobutton1" id="radio4" /> <label
for="radio4">radio4</label>

</li>

<li>

<h3>Button</h3>

<input type="button" name="button1" value="Submit" />

</li>

</ul>

```

Now you can add the corresponding extender controls.

Step 2 of 3: Adding Extender Controls to the Page

Wijmo Control Toolkit Extender Controls > Form Decorator Extenders > Form Decorator Extender Controls
Tutorial > Step 2 of 3: Adding Extender Controls to the Page

In this step, you will add FormDecorator extender controls to associate with the standard controls. You can use the **TargetControlID** to specify the controls to associate with the **Textbox**, **Button** and **Dropdown** extenders. But since we have multiple checkboxes and radio buttons, we can use the **TargetSelector** property in place of the **TargetControlID** property to apply extender functionality on several controls at one time.

1. Select the **DropDownList** control, click the smart tag and select **Add Extender** from the **DropDownList Tasks** menu.
2. Select **C1DropDownExtender** and click **OK**. If you look at the top of the Default.aspx page in Source view, you'll notice the C1.Web.Wijmo.Extenders.x assembly has been registered, like this:

```

<%@ Register assembly="C1.Web.Wijmo.Extenders.3"
namespace="C1.Web.Wijmo.Extenders.C1FormDecorator" tagprefix="cc1" %>

```

3. In Design view, select the **TextBox** control, click the smart tag and select **Add Extender** from the **TextBox Tasks** menu.
4. Select **C1TextboxExtender** and click **OK**.
5. Select the **Button** control, click the smart tag and select **Add Extender** from the **Button Tasks** menu.
6. Select **C1ButtonExtender** and click **OK**.
7. In Source view, add the following markup for the **C1CheckboxExtender** and **C1RadioExtender** controls.

```
<cc1:C1CheckboxExtender ID="C1CheckboxExtender1" runat="server"
```

```
    TargetSelector=":input[type='checkbox']">
```

```
</cc1:C1CheckboxExtender>
```

```
<cc1:C1RadioExtender ID="C1RadioExtender1" runat="server"
```

```
    TargetSelector=":input[type='radio']">
```

```
</cc1:C1RadioExtender>
```

6. Now run the project to see the formatted FormDecorators.

Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > Form Decorator Extenders > Form Decorator Extender Controls
Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the following:

• TextArea

• Drop-down list of options

• CheckBox

☒ checkbox1
☐ checkbox2
☒ checkbox3
☒ checkbox4

• Radio

☐ radio1
☐ radio2
☒ radio3
☐ radio4

• Button

Step 4 of 4: Running the Project

Step 1 of 4: Creating a Gallery

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > C1GalleryExtender Tutorial > Step 1 of 4: Creating a Gallery

In this topic you will add some list items to a panel which will later become a gallery.

1. In your Web application, add a standard Panel control to the main content of your page.
2. In the Panel, add some images to an unordered list. For example, the markup might look like the following:

```
<asp:Panel ID="Panel1" runat="server" Width="466px">

    <ul class="">

        <li class=""> <a href="http://lorempixel.com/400/200/sports/1">

            </a> </li>

        <li class=""> <a href="http://lorempixel.com/400/200/sports/2">

            </a> </li>

        <li class=""> <a href="http://lorempixel.com/400/200/sports/3">

            </a> </li>

        <li class=""> <a href="http://lorempixel.com/400/200/sports/4">

            </a> </li>

    </ul>

</asp:Panel>
```

Add a C1GalleryExtender to the page in the next step.

Step 2 of 4: Adding C1Gallery Extender to the Page

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > C1GalleryExtender Tutorial > Step 2 of 4: Adding C1Gallery Extender to the Page

In this step, you will add a C1GalleryExtender control to associate with the **Panel** to create the gallery.

1. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
2. In the **Extender Wizard**, select **C1GalleryExtender** and click **OK**. A C1GalleryExtender control is added to the page and the **TargetControlID** is set to Panel1.

```
<cc1:C1GalleryExtender ID="Panel1_C1GalleryExtender" runat="server"
TargetControlID="Panel1" ThumbnailDirection="After">
```

```
</cc1:C1GalleryExtender>
```

3. Now you can begin setting properties for the **C1GalleryExtender** to format the gallery.

Step 3 of 4: Customizing the Gallery

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > C1GalleryExtender Tutorial > Step 3 of 4: Customizing the Gallery

In this topic you will set some of the properties for the C1GalleryExtender to change the appearance of the thumbnails.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1_C1GalleryExtender**.
3. Set the C1GalleryExtender.ThumbsDisplay property to 2. Only two thumbnails will be displayed for the gallery at a time.
4. Set the C1GalleryExtender.ThumbnailOrientation property to **Vertical**. The thumbnails will appear vertically stacked to the right of the gallery.

The markup for the **GalleryExtender** will now look like this:

```
<cc1:C1GalleryExtender ID="Panel1_C1GalleryExtender" runat="server"
    TargetControlID="Panel1" ThumbnailDirection="After"
    ThumbnailOrientation="Vertical" ThumbsDisplay="2">
</cc1:C1GalleryExtender>
```

Now run the project to see the gallery of images.

Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > C1GalleryExtender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- The thumbnails are vertically stacked to the right of the gallery.
- Only two images thumbnails appear at one time.

Setting the Thumbnail Orientation

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > Setting the Thumbnail Orientation

By default, the C1GalleryExtender is displayed horizontally with thumbnail images appearing below the currently selected gallery image. You can customize the orientation of the thumbnail images with the **ThumbnailOrientation** and **ThumbnailDirection** properties. In this example you'll add a gallery control and two drop-down boxes that can be used to set the thumbnail orientation at run time.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gallery" TagPrefix="Gallery" %>
```

Note that you may need to edit the above depending on the assembly you are using.

- ```
<asp:Panel ID="gallery" runat="server" Font-Overline="False" Title="Overview" Width="750"
Height="256">
```

```
<Gallery:C1GalleryExtender runat="server" ID="GalleryExtender1" ThumbnailDirection="After"
ShowControlsOnHover="false" ThumbsDisplay="3" ThumbsLength="120"
ThumbnailOrientation="Vertical" TargetControlID="gallery">
```

Orientation:    

```
<asp:ListItem>Horizontal</asp:ListItem>
```

```
{

 gallery.Width = 750;

 gallery.Height = 256;

 GalleryExtender1.ThumbnailOrientation = C1.Web.Wijmo.Extenders.Orientation.Vertical;

}

else

{

 gallery.Width = 750;

 gallery.Height = 410;

 GalleryExtender1.ThumbsDisplay = 4;

 GalleryExtender1.ThumbnailOrientation = C1.Web.Wijmo.Extenders.Orientation.Horizontal;

}

 GalleryExtender1.ThumbnailDirection = DirectionDDL.SelectedValue == "After" ?
C1.Web.Wijmo.Extenders.C1Gallery.ThumbsPosition.After :
C1.Web.Wijmo.Extenders.C1Gallery.ThumbsPosition.Before;

}
```

Note that the **ThumbnailOrientation** property determines the orientation of the thumbnails (**Horizontal** or **Vertical**) and the **ThumbnailDirection** property determines the position of the thumbnails (**Before** or **After** the selected image).

### What You've Accomplished

Press **F5** to run your application, select different values from the **Orientation** and **Direction** drop-down boxes, and click **Apply**. You can view how different orientation and thumbnail directions appear.

## Adding a Pager to the Gallery

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > Adding a Pager to the Gallery

If you choose, you can add a pager to the Gallery to provide additional navigation options. The pager allows users to move from one item to another quickly. Set the **ShowPager** option to determine if a pager is displayed.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gallery" TagPrefix="Gallery" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content:

```
<asp:Panel ID="gallery" runat="server" Font-Overline="False" Title="Overview" Width="750"
Height="300">
```

```
<ul class="">
```

```
<li class="">
```

```

```

```

```

```
<li class="">
```

```

```

```

```

```
<li class="">
```

```

```

```

```

```
<li class="">
```

```

```

```

```

```
<li class="">
```

```

```

```

<li class="">

<li class="">

<li class="">

<li class="">

<li class="">

</asp:Panel>

```

The above markup adds ten images to the gallery.

5. Add the following markup just below the Panel markup to set the gallery extender:

```

<Gallery:C1GalleryExtender runat="server" ID="GalleryExtender1"
ShowControlsOnHover="false" ShowPager="true" ThumbsDisplay="3" ThumbsLength="120"
TargetControlID="gallery">

</Gallery:C1GalleryExtender>

```

The **ShowPager** option is set to **True** so a pager will be displayed at run time.

### What You've Accomplished

Press **F5** to run your application and notice that a pager is included under the gallery. Choose a number in the pager to view the image associated with that number.

## Setting the Gallery Animation at Run Time

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > Setting the Gallery Animation at Run Time

The C1GalleryExtender can display transition animation effects when the user moves from one gallery item to the next. In this example you'll add a gallery control and a drop-down box that can be used to set the transition animation at run time.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gallery" TagPrefix="Gallery" %>
```

4. Note that you may need to edit the above depending on the assembly you are using.
5. And add the following markup within the main <div> tag to add a Panel with content and set the gallery extender:

```
<asp:Panel ID="gallery" runat="server" Font-Overline="False" Title="Overview" Width="750"
Height="256">
```

```
<ul class="">
```

```
<li class="">
```

```

```

```

```

```
<li class="">
```

```

```

```

```

```
<li class="">
```

```

```

```

```

```
<li class="">
```

```

 <li class="">

 <li class="">

</asp:Panel>

<Gallery:C1GalleryExtender runat="server" ID="Gallery1" ShowTimer="True"
ThumbnailOrientation="Vertical" ThumbsDisplay="3" ShowPager="false"
TargetControlID="gallery">

 <Transitions>

 <Animated Disabled="false" Effect="slide" />

 </Transitions>

</Gallery:C1GalleryExtender>

```

Notice that the **Transitions** tags in the gallery widget that allow setting transition effects or disable these transitions.

6. Add the following markup just below the gallery markup to add a drop-down list with animation options:

```

<label for="showingEffectTypes">Animation</label>

<asp:DropDownList ID="showEffectTypes" runat="server">

 <asp:ListItem Value="blind" Selected="True">Blind</asp:ListItem>

 <asp:ListItem Value="clip">Clip</asp:ListItem>

 <asp:ListItem Value="drop">Drop</asp:ListItem>

 <asp:ListItem Value="explode">Explode</asp:ListItem>

 <asp:ListItem Value="fade">Fade</asp:ListItem>

```

```
<asp:ListItem Value="fold">Fold</asp:ListItem>

<asp:ListItem Value="highlight">Highlight</asp:ListItem>

<asp:ListItem Value="puff">Puff</asp:ListItem>

<asp:ListItem Value="pulsate">Pulsate</asp:ListItem>

<asp:ListItem Value="scale">Scale</asp:ListItem>

<asp:ListItem Value="size">Size</asp:ListItem>

<asp:ListItem Value="slide">Slide</asp:ListItem>

</asp:DropDownList>
```

7. Add the following script to the page to initialize the gallery and the drop-down box:

```
<script type="text/javascript">

$(document).ready(function () {

 var transitions = {

 animated: "fade",

 duration: 1000,

 easing: null

 }

 $('#<%=showEffectTypes.ClientID%>').change(function () {

 var ee = $('#<%=showEffectTypes.ClientID%> option:selected').val();

 $.extend(transitions, { animated: ee });

 $('#<%=gallery.ClientID%>').wijgallery("option", "transitions", transitions);

 });

});

</script>
```

### What You've Accomplished

Press **F5** to run your application, select an option from the **Animation** drop-down boxes, and click a thumbnail image to view how the transition animation appears. Try other animation types.

## Displaying External Content in the Gallery

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > Displaying External Content in the Gallery

If you choose, you can display external Web site content within the Gallery extender. The gallery extender's iFrame mode has an inner iFrame that links to another URL. In this example, you'll set the gallery's Mode to "iframe" and display two Web sites in the gallery.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gallery" TagPrefix="Gallery" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content:

```
<asp:Panel ID="gallery" runat="server" Font-Overline="False" Title="Overview" Width="750"
Height="600">
```

```
<ul class="">
```

```
<li class="">
```

```

```

```
<li class="">
```

```

```

```

```

```

```

```
</asp:Panel>
```

The above markup adds two Web sites to the panel's content.

5. Add the following markup just below the Panel markup to set the gallery extender:

```
<Gallery:C1GalleryExtender runat="server" ID="CarouselExtender2" ShowTimer="false"
ShowCaption="false" ShowControlsOnHover="false" ThumbnailOrientation="Horizontal"
```

```
ThumbsLength="100" ThumbsDisplay="4" ShowPager="false" Mode="Iframe"
TargetControlID="gallery">
```

```
</Gallery:C1GalleryExtender>
```

The **Mode** option is set to "iframe" so the Web site content will be displayed.

### What You've Accomplished

Press **F5** to run your application and notice that a Website is displayed in the gallery. You can interact with the Web site within the gallery or choose another Web site to view.

## Displaying Flash and Video Content in the Gallery

Wijmo Control Toolkit Extender Controls > C1Gallery Extender > Displaying Flash and Video Content in the Gallery

If you choose, you can display video or Flash content within the gallery extender. The gallery's Flash mode has an inner Flash player in the frame to display Flash content. In this example, external Flash content will be linked to in the gallery and the gallery's **Mode** will set to "Swf".

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose **Add Reference**. Locate and add a reference to the **C1.Web.Wijmo.Extenders** assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gallery" TagPrefix="Gallery" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content:

```
<asp:Panel ID="gallery" runat="server" Font-Overline="False" Title="Overview"
Width="700" Height="600">
```

```
<ul class="">
```

```
<li class="">
```

```

```

```
<li class="">
```

```

```

```
<li class="">
```

```

```

```

```

```
</asp:Panel>
```

5. The above markup adds links to three Flash videos to the panel's content.
6. Add the following markup just below the Panel markup to set the gallery extender:

```
<Gallery:C1GalleryExtender runat="server" ID="CarouselExtender2" ShowTimer="True"
ThumbnailOrientation="Horizontal" ThumbsDisplay="4" ShowPager="false" Mode="Swf"
TargetControlID="gallery">
```

```
</Gallery:C1GalleryExtender>
```

The **Mode** option is set to "Swf" so the Flash content will be displayed.

### What You've Accomplished

Press **F5** to run your application and notice that Flash content is displayed in the gallery. You can chose another Flash item's thumbnail image to view that item in the main gallery.

## Gauge Extenders

Wijmo Control Toolkit Extender Controls > Gauge Extenders

Create custom linear and radial gauges using the C1LinearGaugeExtender and C1RadialGaugeExtender controls.

### C1Linear Gauge Extender

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender

The C1LinearGaugeExtender control allows you to create custom linear gauges, which can be horizontal, vertical, or tilted.

#### C1LinearGaugeExtender Markup

The following markup creates a C1LinearGaugeExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1LinearGaugeExtender ID="Panel1_C1LinearGaugeExtender" runat="server"
Max="100" Min="0" TargetControlID="Panel1" Value="0">
```

```
<tickmajor factor="2" interval="10" offset="0">

</tickmajor>

<tickminor factor="1" interval="5" offset="0" visible="False">

</tickminor>

<pointer length="30" offset="0" width="4">

</pointer>

<labels offset="0">

</labels>

<animation duration="2000" easing="EaseOutBack">

</animation>

</cc1:C1LinearGaugeExtender>
```

## C1LinearGaugeExtender Tutorial

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > C1LinearGaugeExtender Tutorial

This tutorial demonstrates how to attach the C1LinearGaugeExtender control to a **Panel** control and customize the gauge.

### See Also

Step 1of 3: Adding a C1LinearGaugeExtender to the Page

Step 2 of 3: Customizing the Gauge

Step 3 of 3: Running the Project

## Step 1of 3: Adding a C1LinearGaugeExtender to the Page

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > C1LinearGaugeExtender Tutorial > Step 1of 3: Adding a C1LinearGaugeExtender to the Page

In this topic you add some content to a **Panel** control and associate a C1LinearGaugeExtender control with it to create a gauge.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select Add Extender from the **Panel Tasks** menu.

3. In the **Extender Wizard**, select **C1LinearGaugeExtender** and click **OK**. A C1LinearGaugeExtender control is added to the page and the **TargetControlID** is set to **Panel1**.

```
<cc1:C1LinearGaugeExtender ID="Panel1_C1LinearGaugeExtender" runat="server"
 Max="100" Min="0" TargetControlID="Panel1" Value="0">
 <tickmajor factor="2" interval="10" offset="0" visible="True">
 </tickmajor>
 <tickminor factor="1" interval="5" offset="0" visible="False">
 </tickminor>
 <pointer length="0.5" offset="0" width="4">
 </pointer>
 <labels offset="0">
 </labels>
 <animation duration="2000" easing="EaseOutBack">
 </animation>
</cc1:C1LinearGaugeExtender>
```

In the next step you will set some of the extender properties.

## Step 2 of 3: Customizing the Gauge

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > C1LinearGaugeExtender Tutorial > Step 2 of 3: Customizing the Gauge

In this topic you will set some of the properties for the C1LinearGaugeExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1\_C1LinearGaugeExtender**.
3. Set the C1GaugeExtender.Value property to 90.
4. Expand the Pointer node, then expand the Style node, and then expand the Fill node. Set the **Color** property to Red using the color picker.
5. Expand the Face node, then expand the **Style** node, and then expand the Fill node. Set the **Color** property to a shade of yellow using the color picker.
6. Expand the **TickMinor** node and set the Visible property to True.

Now run the project to see the formatted gauge.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > C1LinearGaugeExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the gauge. Notice how the red pointer moves to 90 and the minor tick marks are now visible.

## Adding Interactivity to LinearGauge

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > Adding Interactivity to LinearGauge

In this example you create an interactive linear gauge. You'll add the C1LinearGaugeExtender and a slider to the page. At run time when the value of the slider changes, so will the value of the gauge.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the **Solution Explorer**, right-click the project and choose **Add Reference**. Locate and add a reference to the **C1.Web.Wijmo.Extenders** assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gauge" TagPrefix="Gauge" %>
```

4. Note that you may need to edit the above depending on the assembly you are using.
5. Add the following markup within the main <div> tag to add a Panel with content and set the linear gauge extender:

```
<asp:Panel ID="linearGauge" runat="server" CssClass="ui-widget ui-widget-content ui-corner-all"></asp:Panel>
```

```
<Gauge:C1LinearGaugeExtender runat="server" ID="LinearGaugeExtender1" Height="100"
Width="400" TargetControlID="linearGauge" Value="50">
```

```
<Animation Duration="400" />
```

```
<Labels>
```

```
<LabelStyle FontSize="12pt" FontWeight="800">
```

```
<Fill Color="#1E395B"></Fill>
```

```

 </LabelStyle>

 </Labels>

 <TickMajor Position="Inside" Offset="-11" Interval="20" Factor="12">

 <TickStyle Width="2">

 <Fill Color="#1E395B"> </Fill>

 </TickStyle>

 </TickMajor>

 <TickMinor Position="Inside" Offset="-11" Visible="true" Interval="4"
Factor="10">

 <TickStyle Width="1">

 <Fill Color="#1E395B"> </Fill>

 </TickStyle>

 </TickMinor>

 <Pointer Shape="Tri" Length="0.5">

 <PointerStyle Stroke="#1E395B">

 <Fill Color="#1E395B"> </Fill>

 </PointerStyle>

 </Pointer>

 <Face>

 <FaceStyle StrokeWidth="4">

 <Fill LinearGradientAngle="270" ColorBegin="#FFFFFF" ColorEnd="#7BA0CC"
Type="LinearGradient"> </Fill>

 </FaceStyle>

 </Face>

</Gauge:C1LinearGaugeExtender>

```

This will add a styled gauge to the page.

6. Add the following markup just below the gauge markup to add a slider and initialize it:

<p>Drag and release the slider to change the gauge's value:</p>

<div id="slider" style="width: 400px"> </div>

<script type="text/javascript">

```
$(document).ready(function () {

 $("#slider").slider({

 value: $("#<%= linearGauge.ClientID %>").wijlineargauge("option", "value"),

 change: function (event, ui) {

 $("#<%= linearGauge.ClientID %>").wijlineargauge("option", "value", ui.value);

 }

 });

});
```

</script>

### What You've Accomplished

Press **F5** to run your application, click and drag the slider's thumb button and observe that the gauge's value changes when the thumb button is released.

## Styling LinearGauge

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > Styling LinearGauge

The C1LinearGaugeExtender control includes several properties that allow you to style every aspect of the gauge, including the face, pointer, tick marks, and labels. In this topic you'll style the gauge.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose **Add Reference**. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gauge" TagPrefix="Gauge" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content and set the linear gauge extender:

```
<asp:Panel ID="linearGauge" runat="server"> </asp:Panel>

<Gauge:C1LinearGaugeExtender runat="server" ID="LinearGaugeExtender1" Height="75"
Width="400" TargetControlID="linearGauge" Value="50">

 <TickMajor Position="Center" Factor="3">

 <TickStyle>

 <Fill Color="White"> </Fill>

 </TickStyle>

 </TickMajor>

 <TickMinor Position="Center" Visible="true">

 <TickStyle>

 <Fill Color="White"> </Fill>

 </TickStyle>

 </TickMinor>

 <Labels>

 <LabelStyle FontSize="14">

 <Fill Color="White"> </Fill>

 </LabelStyle>

 </Labels>

 <Pointer Length="1" Width="20" Shape="Tri">

 <PointerStyle Stroke="#FB7800" Opacity="0.8">

 <Fill LinearGradientAngle="180" ColorBegin="#FB7800" ColorEnd="#C00100"
Type="LinearGradient"> </Fill>

 </PointerStyle>

 </Pointer>

 <Animation Duration="2000" Easing="EaseOutBack"> </Animation>
```

```
<Face>
```

```
<FaceStyle StrokeWidth="0" Stroke="Gray">
```

```
<Fill ColorBegin="#3333CC" ColorEnd="#0099CC" Type="LinearGradient"></Fill>
```

```
</FaceStyle>
```

```
</Face>
```

```
</Gauge:C1LinearGaugeExtender>
```

This will add a styled gauge to the page.

### What You've Accomplished

Press **F5** to run your application, notice how the gauge is styled. Stop the application and edit the style properties to change the appearance of the gauge.

## Adding a Logarithmic LinearGauge

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > Adding a Logarithmic LinearGauge

The C1LinearGaugeExtender control supports logarithmic gauges. This example will show how you can control the ticks' nonuniform use using the **Islogarithmic** and **LogarithmicBase** properties. You'll add a gauge and a check box that will allow you to select at run time if the gauge should be displayed as logarithmic or not.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the **Solution Explorer**, right-click the project and choose **Add Reference**. Locate and add a reference to the **C1.Web.Wijmo.Extenders assembly**.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gauge" TagPrefix="Gauge" %>
```

4. Note that you may need to edit the above depending on the assembly you are using.
5. Add the following markup within the main <div> tag to add a Panel with content and set the linear gauge extender:

```
<asp:Panel ID="linearGauge" runat="server"></asp:Panel>
```

```
<Gauge:C1LinearGaugeExtender runat="server" ID="LinearGaugeExtender1" Height="80"
Width="400" TargetControlID="linearGauge" Value="50" Islogarithmic="true">
```

```
<Labels>
```

```

 <LabelStyle FontSize="12pt" FontWeight="800">

 <Fill Color="#1E395B"> </Fill>

 </LabelStyle>

</Labels>

<Pointer Shape="Rect" Length="0.5">

 <PointerStyle Stroke="#1E395B">

 <Fill Color="#1E395B"> </Fill>

 </PointerStyle>

</Pointer>

<TickMajor Position="Inside" Factor="2" Interval="20">

 <TickStyle StrokeWidth="0">

 <Fill Color="#1E395B"> </Fill>

 </TickStyle>

</TickMajor>

<TickMinor Visible="true" Interval="4" Position="Inside">

 <TickStyle StrokeWidth="0">

 <Fill Color="#1E395B"> </Fill>

 </TickStyle>

</TickMinor>

<Animation Duration="2000" Easing="EaseOutBack"> </Animation>

<Face>

 <FaceStyle Stroke="#7BA0CC" StrokeWidth="4">

 <Fill ColorBegin="White" ColorEnd="#D9E3F0" LinearGradientAngle="270"
Type="LinearGradient"> </Fill>

 </FaceStyle>

</Face>

```

```
</Gauge:C1LinearGaugeExtender>
```

This will add a styled gauge to the page.

6. Add the following markup just below the gauge markup to add a check box and initialize it:

```
<input type="checkbox" id="checkbox1" checked="checked" />

<label for="checkbox1">IsLogarithmic</label>

<script type="text/javascript">

 $(document).ready(function () {

 $("#checkbox1").change(function () {

 $("#<%= linearGauge.ClientID %>").wijlineargauge("option", "islogarithmic",
$(this).is(":checked"));

 });

 });

</script>
```

### What You've Accomplished

Press **F5** to run your application, notice that the gauge displayed has a logarithmic scale. Deselect the check box to return the gauge to its default view.

## Setting the Linear Gauge Orientation

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Linear Gauge Extender > Setting the Linear Gauge Orientation

The C1LinearGaugeExtender control supports horizontal (default) and vertical orientation. In this example you'll add a drop-down box that will enable user to change the orientation of the gauge at run time.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gauge" TagPrefix="Gauge" %>
```

Note that you may need to edit the above depending on the assembly you are using.

Add the following markup within the main <div> tag to add a **Panel** with content and set the linear gauge extender:

```
<asp:Panel ID="linearGauge" runat="server" Width="310" Height="70">

</asp:Panel>

<Gauge:C1LinearGaugeExtender runat="server" ID="LinearGaugeExtender1"
TargetControlID="linearGauge" Value="50">

 <TickMajor Position="Inside" Factor="3">

</TickMajor>

 <TickMinor Visible="true">

</TickMinor>

</Gauge:C1LinearGaugeExtender>
```

This will add a styled gauge to the page.

Add the following markup just below the gauge markup to add a drop-down box and initialize it:

```
<p>

 <select id="orientation">

 <option>horizontal</option>

 <option>vertical</option>

 </select>

</p>

<script type="text/javascript">

 $(document).ready(function () {

 var gaugeEle = $("#<%= linearGauge.ClientID %>"),

 width = gaugeEle.width(),

 height = gaugeEle.height();

 $("#orientation").change(function () {
```

```
var orientation = $(this).val();

gaugeEle.wijlineargauge("option", "orientation", orientation);

if (orientation === "vertical") {

 gaugeEle.width(height);

 gaugeEle.height(width);

}

else {

 gaugeEle.width(width);

 gaugeEle.height(height);

}

});

});

</script>
```

### What You've Accomplished

Press **F5** to run your application, notice that the gauge appears horizontal. Choose **vertical** from the drop-down box to change the gauge's orientation.

## C1RadialGaugeExtender

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1RadialGaugeExtender

The C1RadialGaugeExtender control allows the user to create custom radial gauges, which can be circular, helical, arc curve, clamshell, or half-circular.

### C1RadialGaugeExtender Markup

The following markup creates a C1RadialGaugeExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1RadialGaugeExtender ID="Panel1_C1RadialGaugeExtender" runat="server"
Max="100" Min="0" StartAngle="0" SweepAngle="180" TargetControlID="Panel2"
```

```
Value="0">
```

```
<cap>
```

```
<style>
```

```
<fill color="Green">
```

```
</fill>
```

```
</style>
```

```
</cap>
```

```
<tickmajor factor="2" interval="10" offset="0" visible="True">
```

```
</tickmajor>
```

```
<tickminor factor="1" interval="5" offset="0" visible="False">
```

```
</tickminor>
```

```
<pointer length="1" offset="0.15" width="4">
```

```
</pointer>
```

```
<labels offset="0">
```

```
</labels>

<animation duration="2000" easing="EaseOutBack">

</animation>

</cc1:C1RadialGaugeExtender>
```

## C1RadialGaugeExtender Tutorial

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1RadialGaugeExtender > C1RadialGaugeExtender Tutorial

This tutorial demonstrates how to attach the C1RadialGaugeExtender control to a Panel control and customize the gauge.

Step 1 of 3: Adding C1RadialGaugeExtender to the Page

Step 2 of 3: Customizing the Gauge

Step 3 of 3: Running the Project

## Step 1 of 3: Adding C1RadialGaugeExtender to the Page

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1RadialGaugeExtender > C1RadialGaugeExtender Tutorial > Step 1 of 3: Adding C1RadialGaugeExtender to the Page

In this topic you add some content to a **Panel** control and associate a C1RadialGaugeExtender control with it to create a gauge.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the Extender Wizard, select **C1RadialGaugeExtender** and click **OK**. A C1RadialGaugeExtender control is added to the page and the **TargetControlID** is set to Panel1.

```
<cc1:C1RadialGaugeExtender ID="Panel1_C1RadialGaugeExtender" runat="server"
Max="100" Min="0" StartAngle="0" SweepAngle="180" TargetControlID="Panel2"
```

```
Value="0">
```

```
<cap>
```

```
<style>
```

```
<fill color="Green">
```

```
</fill>

</style>

</cap>

<tickmajor factor="2" interval="10" offset="0" visible="True">

</tickmajor>

<tickminor factor="1" interval="5" offset="0" visible="False">

</tickminor>

<pointer length="1" offset="0.15" width="4">

</pointer>

<labels offset="0">

</labels>

<animation duration="2000" easing="EaseOutBack">

</animation>

</cc1:C1RadialGaugeExtender>
```

In the next step you will set some of the extender properties.

## Step 2 of 3: Customizing the Gauge

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1RadialGaugeExtender > C1RadialGaugeExtender Tutorial > Step 2 of 3: Customizing the Gauge

In this topic you will set some of the properties for the C1RadialGaugeExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1\_C1RadialGaugeExtender**.
3. Set the **C1GaugeExtender.Value** property to 90.
4. Expand the **Cap** node, then expand the **Style** node, and then expand the **Fill** node. Set the **Color** property to Red using the color picker.
5. Expand the **Pointer** node, then expand the **Style** node, and then expand the **Fill** node. Set the **Color** property to Red using the color picker.
6. Expand the **TickMinor** node and set the **Visible** property to True.
7. Now run the project to see the formatted gauge.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1RadialGaugeExtender >

C1RadialGaugeExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the gauge. Notice how the red pointer moves to 90 and the minor tick marks are now visible.

## Adding a Logarithmic RadialGauge

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1RadialGaugeExtender > Adding a Logarithmic RadialGauge

The C1RadialGaugeExtender control supports logarithmic gauges. This example will show how you can control the ticks' nonuniform use using the **Islogarithmic** and **LogarithmicBase** properties. You'll add a gauge and a check box that will allow you to select at run time if the gauge should be displayed as logarithmic or not.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gauge" TagPrefix="Gauge" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. And add the following markup within the main <div> tag to add a Panel with content and set the linear gauge extender:

```
<asp:Panel ID="radialGauge" Height="475" Width="756" runat="server">
```

```
</asp:Panel>
```

```
<Gauge:C1RadialGaugeExtender runat="server" ID="RadialGaugeExtender1"
TargetControlID="radialGauge" Value="100" StartAngle="-45" SweepAngle="270"
Islogarithmic="true" Max="150">
```

```
 <Cap Radius="10">
```

```
 <PointerCapStyle Stroke="#1E395B">
```

```
 <Fill Color="#1E395B">
```

```
 </Fill>
```

```
 </PointerCapStyle>
```

```
</Cap>
```

```
<TickMajor Factor="2" Visible="True" Interval="10" Offset="27" Position="Inside">
```

```
 <TickStyle Height="4" Stroke="#E7EFF8" StrokeWidth="1.5" Width="20">
```

```
 <Fill Color="#1E395B">
```

```
 </Fill>
```

```
</TickStyle>
```

```
</TickMajor>
```

```
<TickMinor Visible="True" Interval="5" Offset="30" Position="Inside">
```

```
 <TickStyle Height="3" Stroke="#E7EFF8" Width="10">
```

```
 <Fill Color="#1E395B">
```

```
 </Fill>
```

```
</TickStyle>
```

```
</TickMinor>
```

```
<Pointer Length="0.8" Width="6" Offset="0" Shape="Rect">
```

```
 <PointerStyle Stroke="#1E395B">
```

```
 <Fill Color="#1E395B">
```

```
 </Fill>
```

```
</PointerStyle>
```

```
</Pointer>
```

```

<Labels Offset="27">

 <LabelStyle FontSize="12pt" FontWeight="800">

 <Fill Color="#1E395B">

 </Fill>

 </LabelStyle>

 </Labels>

 <Animation Duration="2000" Easing="EaseOutBack"> </Animation>

 <Face>

 <FaceStyle Stroke="#7BA0CC" StrokeWidth="4">

 <Fill ColorBegin="White" ColorEnd="#D9E3F0" RadialGradientFocusPointX="0.9"
 RadialGradientFocusPointY="0.6" Type="RadialGradient">

 </Fill>

 </FaceStyle>

 </Face>

 <Ranges>

 <Gauge:GaugelRange EndDistance="0.58" EndValue="10" EndWidth="5"
 StartDistance="0.6" StartValue="0" StartWidth="2">

 <RangeStyle Stroke="#7BA0CC" StrokeWidth="0">

 <Fill Color="#7BA0CC">

 </Fill>

 </RangeStyle>

 </Gauge:GaugelRange>

 <Gauge:GaugelRange EndDistance="0.54" EndValue="125" EndWidth="20"
 StartDistance="0.58" StartValue="10" StartWidth="5">

 <RangeStyle Stroke="White" StrokeWidth="0">

 <Fill ColorBegin="#B4D5F0" ColorEnd="#B4D5F0" Type="LinearGradient">

 </Fill>

```

```

 </RangeStyle>

 </Gauge:GaugelRange>

 <Gauge:GaugelRange EndDistance="0.5" EndValue="150" EndWidth="25"
 StartDistance="0.54" StartValue="125" StartWidth="20">

 <RangeStyle Stroke="#7BA0CC" StrokeWidth="0">

 <Fill Color="#7BA0CC">

 </Fill>

 </RangeStyle>

 </Gauge:GaugelRange>

 </Ranges>

</Gauge:C1RadialGaugeExtender>

```

This will add a styled gauge to the page.

5. And add the following markup just below the gauge markup to add a check box and initialize it:

```

<script type="text/javascript">

 $(document).ready(function () {

 $("#checkbox1").change(function () {

 $("#<%= radialGauge.ClientID %>").wijradialgauge("option", "islogarithmic",
 $(this).is(":checked"));

 });

 });

</script>

<input type="checkbox" id="checkbox1" checked="checked" />

<label for="checkbox1">IsLogarithmic</label>

```

### What You've Accomplished

Press **F5** to run your application, notice that the gauge displayed has a logarithmic scale. Deselect the check box to return the gauge to its default view.

## Styling RadialGauge

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1RadialGaugeExtender > Styling RadialGauge

The **C1RadialGaugeExtender** control includes several properties that allow you to style every aspect of the gauge, including the face, pointer, tick marks, and labels. In this topic you'll style the gauge using these properties and also a face template.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1Gauge" TagPrefix="Gauge" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. And add the following markup within the main <div> tag to add a Panel with content and set the linear gauge extender:

```
<asp:Panel ID="radialGauge" runat="server" CssClass="ui-widget ui-widget-content ui-corner-all">
```

```
</asp:Panel>
```

```
<Gauge:C1RadialGaugeExtender runat="server" ID="RadialGaugeExtender1"
TargetControlID="radialGauge" Value="468" Max="1200" StartAngle="270" Width="500"
Height="500" SweepAngle="240">
```

```
<Labels Offset="-5">
```

```
<LabelStyle FontSize="15pt" FontWeight="800" Fill-Color="#000"> </LabelStyle>
```

```
</Labels>
```

```
<Pointer Width="16" Length="0.95">
```

```
<PointerStyle>
```

```
<Fill LinearGradientAngle="340" ColorBegin="#FB7800" ColorEnd="#C00100"
Type="LinearGradient"> </Fill>
```

```
</PointerStyle>
```

```
</Pointer>
```

```

<Cap>

 <PointerCapStyle>

 <Fill Color="#C00100"> </Fill>

 </PointerCapStyle>

</Cap>

<TickMajor Factor="8" Offset="0" Interval="100" Position="Inside" >

 <TickStyle Height="4">

 <Fill Color="#333333"> </Fill>

 </TickStyle>

</TickMajor>

<TickMinor Factor="3" Visible="true" Offset="10" Interval="25" Position="Inside">

 <TickStyle Height="1">

 <Fill Color="#333333"> </Fill>

 </TickStyle>

</TickMinor>

<Face Template="face"> </Face>

<Ranges>

 <Gauge:GaugelRange StartWidth="73" EndWidth="73" StartValue="1000"
EndValue="1200" StartDistance="0.575" EndDistance="0.575">

 <RangeStyle>

 <Fill LinearGradientAngle="40" ColorBegin="#FB7800" ColorEnd="#C00100"
Type="LinearGradient"> </Fill>

 </RangeStyle>

 </Gauge:GaugelRange>

 <Gauge:GaugelRange StartWidth="10" EndWidth="1" StartValue="625" EndValue="1175"
StartDistance="0.75" EndDistance="0.8">

 <RangeStyle>

```

```
<Fill Color="#333333"></Fill>

</RangeStyle>

</Gauge:GaugeRange>

</Ranges>

</Gauge:C1RadialGaugeExtender>
```

This will add a styled gauge to the page.

5. And add the following markup just below the gauge markup to add a face template:

```
<script type="text/javascript">

function face(ui) {

 var set = ui.canvas.set();

 var circle = ui.canvas.circle(ui.origin.x, ui.origin.y, ui.r);

 circle.attr({ "stroke": "#474747", "stroke-width": 3, fill: "#fff" });

 set.push(circle);

 var circle2 = ui.canvas.circle(ui.origin.x, ui.origin.y, 100);

 circle2.attr({ fill: "#060606" });

 set.push(circle2);

 return set;

}

</script>
```

### What You've Accomplished

Press **F5** to run your application, notice that the gauge displayed is styled to appear like a speedometer. Stop the application and edit the style properties to change the appearance of the gauge.

## C1Grid Extender

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender

The C1GridExtender control creates a tabular datagrid that allows users to interactively select, edit, sort, scroll through, filter, and group data. The grid is highly customizable and can be used to better understand and visualize data more effectively.

## C1GridExtender Tutorial

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > C1GridExtender Tutorial

This tutorial demonstrates how to attach the C1GridExtender to a **GridView** control, add data to the grid from a bound data source, and customize it by setting the extender properties.

### See Also

Step 1 of 3: Adding a C1GridExtender to the Page

Step 2 of 3: Binding the Grid to a Data Source

Step 3 of 3: Customizing the Grid

## Step 1 of 3: Adding a C1GridExtender to the Page

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > C1GridExtender Tutorial > Step 1 of 3: Adding a C1GridExtender to the Page

In this topic you add some content to a **Table** control and associate a **C1GridExtender** control with it to create a grid.

1. In your Web application, add a standard **Data.GridView** control to the main content of your page.
2. Click the **GridView** smart tag and select **Add Extender** from the Table Tasks menu.
3. In the Extender Wizard, select **C1GridExtender** and click **OK**. A C1GridExtender control is added to the page and the **TargetControlID** is set to **GridView1**.

```
<cc1:C1GridExtender ID="GridView1_C1GridExtender" runat="server"
AlwaysParseData="False" ShowFooter="False" TargetControlID="GridView1">

</cc1:C1GridExtender>
```

In the next step you will bind the C1GridExtender to a data source.

## Step 2 of 3: Binding the Grid to a Data Source

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > C1GridExtender Tutorial > Step 2 of 3: Binding the Grid to a Data Source

In this topic you will add the **C1NWind.mdb** database that is installed with the product and bind it to the C1GridExtender.

1. Add the C1NWind.mdb database installed with this product to the App\_Data folder of the project.
2. In the Solution Explorer, right-click the App\_Data folder and select Add | Existing Item.

3. Select C1NWind.mdb and click Add.
4. In the Toolbox, drag an AccessDataSource control to the page, click the smart tag, and choose Configure Data Source in the Tasks menu.
5. Click **Browse**, select the **C1NWind.mdb** database, and click **OK**.
6. Click **Next**, click **Next** again, and then **Finish** to close the **Configure Data Source** wizard.
7. Click the GridView smart tag and select AccessDataSource1 next to Choose Data Source.

## Step 3 of 3: Customizing the Grid

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > C1GridExtender Tutorial > Step 3 of 3: Customizing the Grid

In this topic you will set grid properties to allow columns to be moved and filtered.

1. Select the markup for the C1GridExtender.
2. In the Properties window, set the **AllowColMoving** property to **True**.
3. Set the ShowFilter property to True. The markup will look like the following:

```
<cc1:C1GridExtender ID="GridView1_GridExtender" runat="server"
 TargetControlID="GridView1" AllowColMoving="True" ShowFilter="True" >

</cc1:C1GridExtender>
```

Now run the project to see the grid.

## Allowing Column Resizing

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > Allowing Column Resizing

The C1GridExtender control supports column resizing on the grid at run time. To allow users to resize the grid's columns at run time, simply set the **AllowColSizing** to **True**. For example, with the following markup:

```
<cc1:C1GridExtender runat="server" ID="GridExtender1" TargetControlID="demo"
 AllowColSizing="true">
```

At run time, click and drag the right or left edge of a column to resize it.

## Allowing Column Moving

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > Allowing Column Moving

The C1GridExtender control supports moving the column at run time to change the order of columns. To allow users to resize the grid's columns at run time, simply set the **AllowColMoving** to **True**. For example, with the following markup:

```
<cc1:C1GridExtender runat="server" ID="GridExtender1" TargetControlID="demo"
AllowColMoving="true">
```

At run time, drag a source column header on a target column header. Columns can be inserted either to the right or to the left of the target column, depending upon closer to which border dragged column is dropped. To add column to a band its header should be dropped to the center of band header.

## Grid Extender Adding Grid Filters

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > Grid Extender Adding Grid Filters

The C1GridExtender control supports adding a filter bar to the top of the grid so that users can filter the grid at run time. To allow users to filter the grid's columns at run time, simply set the **ShowFilter** property to **True**. For example, with the following markup:

```
<cc1:C1GridExtender runat="server" ID="GridExtender1" TargetControlID="demo"
ShowFilter="true">
```

At run time, enter values in the filter bar to filter the grid.

## Allowing Sorting

Wijmo Control Toolkit Extender Controls > Gauge Extenders > C1Grid Extender > Allowing Sorting

The C1GridExtender control supports sorting columns on the grid at run time. To allow users to sort the grid's columns at run time, simply set the **AllowSorting** to **True**. For example, with the following markup:

```
<cc1:C1GridExtender runat="server" ID="GridExtender1" TargetControlID="demo"
AllowSorting="true">
```

To set a column's sort initial sort direction, set the **SortDirection** property on the column, for example:

```
<cc1:C1Field HeaderText="Number" DataType="Number" DataFormatString="n0"
SortDirection="Ascending" />
```

## Input Extenders

The Wijmo Input extender controls allow you to create masked, numeric, percentage, currency and date inputs, depending on the type of data users will be entering.

- C1InputDateExtender

The C1InputDateExtender control is used to edit the date and time.

### C1InputDateExtender Markup

The following markup creates a C1InputDateExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1InputDateExtender ID="TextBox1_C1InputDateExtender" runat="server"
 TargetControlID="TextBox1">
 <PopupPosition>
 <Offset Top="4">
 </Offset>
 </PopupPosition>
</cc1:C1InputDateExtender>
```

- C1InputMaskExtender

The C1InputMaskExtender control supports data formatting, edit mask, data validation, and other features.

### **C1InputDateExtender Markup**

The following markup creates a C1InputMaskExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<asp:TextBox ID="TextBox1" runat="server"></asp:TextBox>
<cc1:C1InputMaskExtender ID="TextBox1_C1InputMaskExtender" runat="server"
 TargetControlID="TextBox1">
</cc1:C1InputMaskExtender>
```

- C1InputNumberExtender

The C1InputNumberExtender control is specialized for editing numeric values.

### **C1InputNumberExtender Markup**

The following markup creates a C1InputNumberExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<wijmo:C1InputNumberExtender ID="TextBox1_C1InputNumberExtender"
 runat="server"
 TargetControlID="TextBox1">
</cc1:C1InputNumberExtender>
```

# InputExtenders Tutorial

Wijmo Control Toolkit Extender Controls > Input Extenders > InputExtenders Tutorial

This tutorial demonstrates how to attach the **Input Extender** controls to **TextBox** controls and customize them by setting the extender properties.

## See Also

Step 1 of 3: Adding Input Extender Controls to the Page

Step 2 of 3: Customizing the Input Extender Controls

Step 3 of 3: Running the Project

## Step 1 of 3: Adding Input Extender Controls to the Page

Wijmo Control Toolkit Extender Controls > Input Extenders > InputExtenders Tutorial > Step 1 of 3: Adding Input Extender Controls to the Page

In this topic you will associate three **TextBox** controls with a **C1InputNumberExtender**, **C1InputDateExtender**, and **C1InputMaskExtender** control to create a calendar.

1. In your Web application, select **Table | Insert Table** to add a table with three row and two columns.
2. Enter **Product Number**, **Order Date**, and **Customer SSN** in the first column and add three text boxes in the second column so your table looks similar to this:
3. Click the first TextBox's smart tag and select **Add Extender** from the Tasks menu.
4. Select **C1InputNumberExtender** and click **OK**.
5. Click the second TextBox's smart tag and select **Add Extender** from the Tasks menu.
6. Select **C1InputDateExtender** and click **OK**.
7. Click the third TextBox's smart tag and select **Add Extender** from the Tasks menu.
8. Select **C1InputMaskExtender** and click **OK**. The **XAML** markup will look similar to this:

```
<table class="style1">
 <tr>
 <td>
 Product Number:</td>
 <td>
 <asp:TextBox ID="TextBox1" runat="server"></asp:TextBox>
```

```

 <cc1:C1InputNumberExtender ID="TextBox1_C1InputNumberExtender"
runat="server"

 TargetControlID="TextBox1">

 </cc1:C1InputNumberExtender>

 </td>

</tr>

<tr>

 <td>

 Order Date:</td>

 <td>

 <asp:TextBox ID="TextBox2" runat="server"> </asp:TextBox>

 <cc1:C1InputDateExtender ID="TextBox2_C1InputDateExtender"
runat="server"

 TargetControlID="TextBox2">

 <PopupPosition>

 <Offset Top="4">

 </Offset>

 </PopupPosition>

 </cc1:C1InputDateExtender>

 </td>

</tr>

<tr>

 <td>

 Customer SSN:</td>

 <td>

 <asp:TextBox ID="TextBox3" runat="server"> </asp:TextBox>

```

```
<cc1:C1InputMaskExtender ID="TextBox3_C1InputMaskExtender"
runat="server"

 TargetControlID="TextBox3">

</cc1:C1InputMaskExtender>

</td>

</tr>

</table>
```

In the next step you will set some of the extender properties.

## Step 2 of 3: Customizing the Input Extender Controls

Wijmo Control Toolkit Extender Controls > Input Extenders > InputExtenders Tutorial > Step 2 of 3: Customizing the Input Extender Controls

In this topic you will set some of the properties for the Input Extender controls.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputNumberExtender**.
3. Set the **C1InputNumberExtender.DecimalPlaces** property to **0** and the **C1InputExtenderBase.ShowSpinner** property to **True**.
4. Click the drop-down list at the top of the Properties window and select **TextBox2\_C1InputDateExtender**.
5. Set the **C1InputDateExtender.StartYear** property to **2010** and the **C1InputDateExtender.MinDate** property to **7/1/2010**.
6. Click the drop-down list at the top of the Properties window and select **TextBox3\_C1InputMaskExtender**.
7. Set the **C1InputMaskExtender.Mask** property to **000-00-0000** and **C1InputMaskExtender.PromptChar** to **#**.

Now run the project to see the formatted Input textboxes.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > Input Extenders > InputExtenders Tutorial > Step 3 of 3:

Running the Project

Press **F5** to run the project and view the following:

Product Number:

Order Date:

Customer SSN:

- You can change the product number using the spin buttons.
- You cannot enter a year prior to 2010 or a date prior to 7/1/2010 in the Order Date textbox.
- The Customer SSN textbox format allows you to enter only nine digits.

## C1InputMaskExtender

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputMaskExtender

Use the C1InputMaskExtender control to improve the efficiency and accuracy of data entry by controlling the values users can enter into a text box.

### Mask Types

The following table lists some examples of masks and their behaviors:

Mask	Behavior
00/00/0000	A date (day, numeric month, year) in international date format. The "/" character is a logical date separator, and will appear to the user as the date separator appropriate to the application's current culture. Note that to specify date patterns, you can use the <b>C1InputDateExtender</b> .
00->L<LL-0000	A date (day, month abbreviation, and year) in United States format in which the three-letter month abbreviation is displayed with an initial uppercase letter followed by two lowercase letters.
(999) 000-0000	United States phone number, area code optional. If users do not want to enter the optional characters, they can either enter spaces or place the mouse pointer directly at the position in the mask represented by the first 0.
\$999,999.00	A currency value in the range of 0 to 999999. The currency, thousandth, and decimal characters will be replaced at run time with their culture-specific equivalents.

Use the **mask** option to define masking elements for the control. If you define an edit mask, each character position in the widget maps to either a special placeholder or a literal character. Literal characters, or literals, can give visual cues about the type of data being used. For example, the parentheses surrounding the area code of a telephone number and dash are

literals: (412) 123-4567. The edit mask prevents users from entering invalid characters and provides other enhancements of the user interface.

### Mask Characters

To enable masked input, set the **mask** property to a mask string composed of one or more placeholders and literals, the following table lists available placeholders:

Masking Element	Description
0	Digit, required. This element will accept any single digit between 0 and 9.
9	Digit or space, optional.
#	Digit or space, optional. If this position is blank in the mask, it will be rendered as a space. Plus (+) and minus (-) signs are allowed.
L	Letter, required. Restricts input to the ASCII letters a-z and A-Z. This mask element is equivalent to [a-zA-Z] in regular expressions.
?	Letter, optional. Restricts input to the ASCII letters a-z and A-Z. This mask element is equivalent to [a-zA-Z]? in regular expressions.
&	Character, required.
C	Character, optional. Any non-control character.
A	Alphanumeric, optional.
.	Decimal placeholder. The actual display character used will be the decimal placeholder appropriate to the culture option.
,	Thousands placeholder. The actual display character used will be the thousands placeholder appropriate to the culture option.
:	Time separator. The actual display character used will be the time placeholder appropriate to the culture option.
/	Date separator. The actual display character used will be the date placeholder appropriate to the culture option.
\$	Currency symbol. The actual character displayed will be the currency symbol appropriate to the culture option.
<	Shift down. Converts all characters that follow to lowercase.
>	Shift up. Converts all characters that follow to uppercase.
	Disable a previous shift up or shift down.
\	Escape. Escapes a mask character, turning it into a literal. "\\\" is the escape sequence for a backslash.
<<n...m>>	Restricts the user input to the declared numeric range, for example, <<0...255>>.
<<Value1 Value2 Value3>>	Restricts the user input to one of the set options. Character (" ") serves as a separator between the option values, for example, <<Option One Option Two Option Three>>.
All other characters	Literals. All non-mask elements will appear as themselves within the mask. Literals always occupy a static position in the mask at run time and cannot be moved or deleted by the user.

## Adding a Mask to a Drop-Down List

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputMaskExtender > Adding a Mask to a

## Drop-Down List

The **C1InputMaskExtender** control allows you to create a mask for a drop-down list box. Use the **ShowTrigger** property to show the drop-down arrow and use the **ComboItems** property to populate the drop-down list.

1. Create an ASP.NET Web application.
2. Add a standard TextBox control to the main content of your page.
3. Click the TextBox smart tag and select **Add Extender** from the Tasks menu.
4. In the **Extender Wizard**, select **C1InputMaskExtender** and click **OK**. A C1InputMaskExtender control is added to the page and the **TargetControlID** is set to TextBox1.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputMaskExtender**.
7. Set the **C1InputMaskExtender.Mask** property to **000-0000**.
8. Set the **C1InputExtenderBase.ShowTrigger** property to **True**.
9. Click the ellipsis button next to the **C1InputExtenderBase.ComboItems** property. Click the Add button three times and enter three values, for example, 100-1000, 200-2000, and 123-1234.

The markup should now look similar to the following:

```
<asp:TextBox ID="TextBox1" runat="server"></asp:TextBox>

<cc1:C1InputMaskExtender ID="TextBox1_C1InputMaskExtender" runat="server"
Mask="000-0000" ShowTrigger="True" TargetControlID="TextBox1">

 <ComboItems>

 <cc1:C1ComboBoxItem Value="100-1000" />

 <cc1:C1ComboBoxItem Value="200-2000" />

 <cc1:C1ComboBoxItem Value="123-1234" />

 </ComboItems>

</cc1:C1InputMaskExtender>
```

10. Press **F5** to run the application. The **ShowTrigger** property displays the drop-down arrow. The Mask requires digits in the format specified, and the drop-down list specified in the ComboItems property contains three preset values.

## Creating a Mask Requiring Letters

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputMaskExtender > Creating a Mask Requiring Letters

The **C1InputMaskExtender** widget allows you to create a mask that requires users to enter letters, for example, in an input box for a user name. Use the **L** masking element for the **Mask** property to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard TextBox control to the main content of your page.
3. Click the TextBox smart tag and select **Add Extender** from the Tasks menu.
4. In the **Extender Wizard**, select **C1InputMaskExtender** and click **OK**. A **C1InputMaskExtender** control is added to the page and the **TargetControlID** is set to TextBox1.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **TextBox1.C1InputMaskExtender**.
7. Set the **C1InputMaskExtender.Mask** property to >L|LLLLLLLLL. Using an L as the masking element requires that a letter is entered. In this case, 10 letters can be entered. The >L| ensures the first letter is capitalized and the letters that follow are lowercase, unless the Shift key is used to capitalize other letters.

The markup should now look similar to the following:

```
<cc1:C1InputMaskExtender ID="TextBox1_C1InputMaskExtender" runat="server"
 Mask=">L|LLLLLLLLL" TargetControlID="TextBox1">
</cc1:C1InputMaskExtender>
```

8. Press **F5** to run the application. Enter some letters and notice the first letter is automatically capitalized.

## Hiding Input in Passwords and SSNs

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputMaskExtender > Hiding Input in Passwords and SSNs

The **C1InputMaskExtender** widget allows you to use password characters so that the actual password or social security number doesn't appear on the screen.

1. Create an ASP.NET Web application.
2. Add two standard TextBox controls to the main content of your page.
3. Click the first TextBox's smart tag and select **Add Extender** from the Tasks menu.
4. In the Extender Wizard, select **C1InputMaskExtender** and click **OK**. A C1InputMaskExtender control is added to the page and the **TargetControlID** is set to TextBox1.
5. Add a **C1InputMaskExtender** to the second TextBox as well. A second C1InputMaskExtender control is added to the page and the TargetControlID is set to **TextBox2**.
6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputMaskExtender**. Set the following properties:

<b>Mask</b>	000-00-0000
<b>PasswordChar</b>	#
<b>HidePromptOnLeave</b>	True

8. Click the drop-down list at the top of the Properties window and select **TextBox2\_C1InputMaskExtender**. Set the following properties:

<b>Mask</b>	CCCCCCC
<b>PasswordChar</b>	*
<b>HidePromptOnLeave</b>	True

9. Press **F5** to run the application and enter numbers in the first textbox. They are hidden by the '#' character. Enter numbers or letters in the second textbox. They are hidden by the '\*' character.

## C1InputNumberExtender

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputNumberExtender

The C1InputNumberExtender control allows users to enter only numbers in an input box. You can specify a minimum and maximum value and determine how many decimal places can be seen.

## Formatting Input as Currency

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputNumberExtender > Formatting Input

as Currency

The `C1InputNumberExtender` control allows you to format input as currency. Set the **NumberType** property to *Currency* to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard `TextBox` control to the main content of your page.
3. Click the `TextBox` smart tag and select **Add Extender** from the Tasks menu.
4. In the **Extender Wizard**, select `C1InputNumberExtender` and click **OK**. A `C1InputNumberExtender` control is added to the page and the **TargetControlID** is set to `TextBox1`.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputNumberExtender**.
7. Set the **C1InputNumberExtender.NumberType** property to **Currency**.
8. Set the **C1InputNumberExtender.Value** property to **25.5**.

The markup should now look similar to the following:

```
<cc1:C1InputNumberExtender ID="TextBox1_C1InputNumberExtender" runat="server"
 NumberType="Currency" TargetControlID="TextBox1" Value="25.5">

 </cc1:C1InputNumberExtender>
```

9. Press **F5** to run the application. The text box displays the initial value of **25.5** formatted as **\$25.50**. Enter any numeric value, and it is formatted as currency.

## Input Number Formatting Input as a Percentage

Wijmo Control Toolkit Extender Controls > Input Extenders > `C1InputNumberExtender` > Input Number Formatting Input as a Percentage

The `C1InputNumberExtender` control allows you to format input as a percentage. Set the **NumberType** property to *Percent* to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard `TextBox` control to the main content of your page.
3. Click the `TextBox` smart tag and select **Add Extender** from the Tasks menu.
4. In the **Extender Wizard**, select **C1InputNumberExtender** and click **OK**. A `C1InputNumberExtender` control is added to the page and the **TargetControlID** is set to `TextBox1`.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputNumberExtender**.
7. Set the **C1InputNumberExtender.NumberType** property to **Percent**.
8. Set the **C1InputNumberExtender.Value** property to **50**.
9. Set the **C1InputNumberExtender.DecimalPlaces** property to **4**.
10. Set the **C1InputExtenderBase.ShowSpinner** property to **True**.

The markup should now look similar to the following:

```
<cc1:C1InputNumberExtender ID="TextBox1_C1InputNumberExtender" runat="server"
 DecimalPlaces="4" NumberType="Percent" ShowSpinner="True"
 TargetControlID="TextBox1" Value="50">

</cc1:C1InputNumberExtender>
```

10. Press **F5** to run the application. The text box displays the initial value of 50 formatted as 50.0000%. Enter any numeric value, and it is formatted as currency.

## Adding Numbers to Drop-Down List

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputNumberExtender > Adding Numbers to Drop-Down List

The C1InputNumberExtender widget allows you to add preset numbers to a drop-down list box. Use the **ShowTrigger** property to show the drop-down arrow and use the **ComboItems** property to populate the drop-down list.

1. Create an ASP.NET Web application.
2. Add a standard TextBox control to the main content of your page.
3. Click the TextBox smart tag and select **Add Extender** from the Tasks menu.
4. In the **Extender Wizard**, select **C1InputNumberExtender** and click **OK**. A **C1InputNumberExtender** control is added to the page and the **TargetControlID** is set to **TextBox1**.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputNumberExtender**.
7. Set the **C1InputNumberExtender.NumberType** property to **Currency**.
8. Set the **C1InputExtenderBase.ShowTrigger** property to **True**.
9. Click the ellipsis button next to the **C1InputExtenderBase.ComboItems** property. Add four members.

Member	Label Property	Value Property
0	100,12\$	100.12
1	1200\$	1200
2	2000\$	2000
3	5200\$	5200

10. Press **F5** to run the application. The showTrigger option displays the drop-down arrow. The type sets the values in the drop-down list to currency. The drop-down list specified in the comboItems option contains four preset values.

## C1InputDateExtender

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputDateExtender

Use the C1InputDateExtender control to convert a textbox control into a date/time input.

### Creating a Date Picker Drop-down Calendar

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputDateExtender > Creating a Date Picker Drop-down Calendar

The **C1InputDateExtender** control allows you to create a create a drop-down calendar that can be used as a date picker. Set the **showTrigger** option to *true* to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard **TextBox** control to the main content of your page.
3. Click the **TextBox** smart tag and select **Add Extender** from the **Tasks** menu.
4. In the **Extender Wizard**, select **C1InputDateExtender** and click **OK**. A **C1InputDateExtender** control is added to the page and the **TargetControlID** is set to **TextBox1**.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputDateExtender**.
7. Set the C1InputExtenderBase.ShowTrigger property to **True**.

The markup should now look similar to the following:

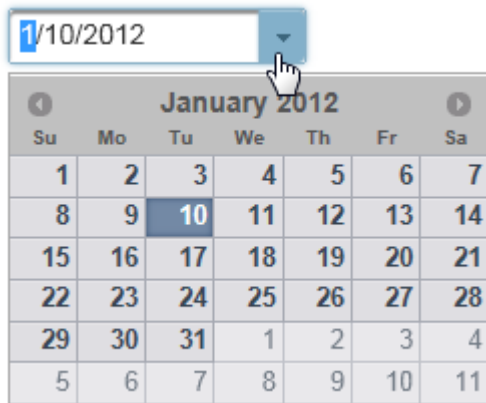

```
<asp:TextBox ID="TextBox1" runat="server"> </asp:TextBox>

<cc1:C1InputDateExtender ID="TextBox1_C1InputDateExtender" runat="server"

 ShowTrigger="True" TargetControlID="TextBox1">
```

```
</cc1:C1InputDateExtender>
```

- Press **F5** to run the application. Click the drop-down arrow and a calendar appears, allowing you to select a date.

## Creating a Drop-Down List of Dates

Wijmo Control Toolkit Extender Controls > Input Extenders > C1InputDateExtender > Creating a Drop-Down List of Dates

The **C1InputDateExtender** control allows you to create a drop-down list box of dates. Use the **showTrigger** option to show the drop-down arrow and use the **comboItems** option to populate the drop-down list.

- Create an ASP.NET Web application.
- Add a standard **TextBox** control to the main content of your page.
- Click the **TextBox** smart tag and select **Add Extender** from the **Tasks** menu.
- In the **Extender Wizard**, select **C1InputDateExtender** and click **OK**. A **C1InputDateExtender** control is added to the page and the **TargetControlID** is set to **TextBox1**.
- Select **View | Properties Window** in the Visual Studio menu.
- Click the drop-down list at the top of the Properties window and select **TextBox1\_C1InputDateExtender**.
  - Set the **C1InputDateExtender.DateFormat** property to **yyyy/M/d**.
  - Set the **C1InputExtenderBase.ShowTrigger** property to **True**.
  - Click the ellipsis button next to the **C1InputExtenderBase.ComboItems** property. Add three members.

Member	Label Property	Value Property
--------	----------------	----------------

0	Birthday	4/8/1980
1	Wedding Day	12/25/2007
3	Today	1/3/2012

The markup should now look similar to the following:

```
<asp:TextBox ID="TextBox1" runat="server"> </asp:TextBox>

<cc1:C1InputDateExtender ID="TextBox1_C1InputDateExtender" runat="server"

 DateFormat="yyyy/M/d" ShowTrigger="True" TargetControlID="TextBox1">

 <PopupPosition>

 <Offset Top="4">

 </Offset>

 </PopupPosition>

 <ComboItems>

 <cc1:C1ComboBoxItem Label="Birthday" Value="4/8/1980" />

 <cc1:C1ComboBoxItem Label="Wedding Day" Value="12/25/2007" />

 <cc1:C1ComboBoxItem Label="Today" Value="1/3/2012" />

 </ComboItems>

 </cc1:C1InputDateExtender>
```

- Press **F5** to run the application. The **showTrigger** option displays the drop-down arrow. The **dateFormat** option sets the format of the dates, and the drop-down list specified in the **comboItems** option contains three list items. When you click one of the list items, the date (value) appears in the text box.

# C1LightBoxExtender

Use the C1LightBoxExtender control to overlay images on the current page. It is a simple way to highlight, or give focus to, an image. You can customize the C1LightBoxExtender to autoplay through images, play flash videos, show animated transitions, and more.

## C1LightBoxExtender Markup

The following markup creates a C1LightBoxExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
 TargetControlID="Panel1">
</cc1:C1LightBoxExtender>
```

# C1LightBoxExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > C1LightBoxExtender Tutorial

This tutorial demonstrates how to attach the C1LightBoxExtender to a **Panel** control containing multiple images.

## See Also

Step 1 of 4: Setting up the Panel

Step 2 of 4: Adding a C1LightBoxExtender to the Page

Step 3 of 4: Customizing the C1LightBoxExtender

Step 4 of 4: Running the Project

## Step 1 of 4: Setting up the Panel

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > C1LightBoxExtender Tutorial > Step 1 of 4: Setting up the Panel

In this topic you will add some images to panel.

1. In your Web application, add a standard Panel control to the main content of your page.
2. In the Panel, add some images. For example, the XAML might look like the following:

```
<asp:Panel ID="Panel1" runat="server">

 <a href="http://lorempixum.com/600/400/sports/1"
 rel="wijlightbox[stock];player=img">

 <a href="http://lorempixum.com/600/400/sports/2"
 rel="wijlightbox[stock];player=img">

 <a href="http://lorempixum.com/600/400/sports/3"
 rel="wijlightbox[stock];player=img">

 <a href="http://lorempixum.com/600/400/sports/4"
 rel="wijlightbox[stock];player=img">

 </asp:Panel>
```

3. Add a C1LightBoxExtender to the page in the next step.

## Step 2 of 4: Adding a C1LightBoxExtender to the Page

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > C1LightBoxExtender Tutorial > Step 2 of 4: Adding a C1LightBoxExtender to the Page

In this step, you will add a C1LightBoxExtender control to associate with the **Panel**.

1. Click the Panel smart tag and select **Add Extender** from the Panel Tasks menu.
2. In the Extender Wizard, select **C1LightBoxExtender** and click **OK**. A **C1LightBoxExtender** control is added to the page and the **TargetControlID** is set to Panel1.

```
<cc1:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
 TargetControlID="Panel1" Player="Img">

</cc1:C1LightBoxExtender>
```

Now you can begin setting properties for the C1LightBoxExtender.

## Step 3 of 4: Customizing the C1LightBoxExtender

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > C1LightBoxExtender Tutorial > Step 3 of 4: Customizing the C1LightBoxExtender

In this topic you will set some of the properties for the C1LightBoxExtender to change the behaviors of the control.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select Panel1\_C1LightBoxExtender.
3. Set the **C1LightBoxExtender.KeyNav** property to true. This allows keyboard buttons to be used to navigate through the images.
4. Set the **C1LightBoxExtender.CtrlButtons** property to **Play, Stop**. This allows the user to click a play button to automatically advance to the next picture or click a stop button to stop advancing.

The markup for the **C1LightBoxExtender** will now look like this:

```
<cc1:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
 FlashInstall="player\expressInstall.swf" FlvPlayer="player\player.swf"
 TargetControlID="Panel1" CtrlButtons="Play, Stop" KeyNav="True">

</cc1:C1LightBoxExtender>
```

Now run the project to see navigate images.

## Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > C1LightBoxExtender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- Click an image to give the image focus.
- Notice that you can advance through the images using the keyboard arrow buttons.

- Click the Play button to automatically advance through the images.

## Displaying Flash and Video Content in the LightBox

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > Displaying Flash and Video Content in the LightBox

If you choose, you can display video or Flash content within the lightbox extender. The lightbox's Flash mode has an inner Flash player in the frame to display Flash content. In this example, external Flash content will be linked to in the lightbox.

Complete the following steps:

- Create a new ASP.NET Web application.
- In the Solution Explorer, right-click the project and choose **Add Reference**. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
- Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1LightBox" TagPrefix="LightBox" %>
```

Note that you may need to edit the above depending on the assembly you are using.

- Add the following markup within the main <div> tag to add a Panel with content:

```
<asp:Panel ID="Panel1" runat="server">

 <a href="http://cdn.wijmo.com/movies/skip.swf"
rel="wilightbox[stock];width=400;height=300">
```

```

```

```
<a href="http://cdn.wijmo.com/movies/caveman.swf"
rel="wijilightbox[stock];width=520;height=390">
```

```

```

```
<a href="http://cdn.wijmo.com/movies/old_man.swf"
rel="wijilightbox[stock];width=600;height=450">
```

```

```

```
</asp:Panel>
```

The above markup adds links to three Flash videos to the panel's content.

5. Add the following markup just below the Panel markup to set the lightbox extender:

```
<LightBox:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
TargetControlID="Panel1" TextPosition="Outside" ControlsPosition="Outside"
ShowCounter="false">
```

```
</LightBox:C1LightBoxExtender>
```

### What You've Accomplished

Press **F5** to run your application and notice that Flash content is displayed in the lightbox. You can choose another Flash item's thumbnail image to view that item in the main lightbox.

## Adding Keyboard Navigation

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > Adding Keyboard Navigation

The C1LightBoxExtender extender supports keyboard navigation to improve accessibility. In this example, you'll set the **KeyNav** property to **True** to add keyboard navigation to your application.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1LightBox" TagPrefix="LightBox" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content:

```
<asp:Panel ID="Panel1" runat="server">

</asp:Panel>
```

5. The above markup adds links to images to the panel's content.
6. Add the following markup just below the Panel markup to set the lightbox extender:

```
<LightBox:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
TargetControlID="Panel1" Player="Img" TextPosition="TitleOverlay" KeyNav="true">

</LightBox:C1LightBoxExtender>
```

Note that you set the **KeyNav** property to **True**.

### What You've Accomplished

Press **F5** to run your application, click an image, and try some of the following keys to navigate through the images:

- LEFT ARROW/DOWN ARROW - Moves to the previous page.
- RIGHT ARROW/UP ARROW - Moves to the next page.
- HOME - Moves to the first page.
- END - Moves to the last page.

## Adding Button Controls to the LightBox

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > Adding Button Controls to the LightBox

The C1LightBoxExtender extender includes options to add Play/Pause and Stop buttons to the control. This gives users the option to play through the images like a slideshow. This example shows how to set the **CtrlButtons** property to determine the visibility of control buttons.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose **Add Reference**. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1LightBox" TagPrefix="LightBox" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content:

```
<asp:Panel ID="Panel1" runat="server">

</asp:Panel>
```

The above markup adds images to the lightbox.

5. Add the following markup just below the Panel markup to set the lightbox extender:

```
<LightBox:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
TargetControlID="Panel1" Player="Img" ShowTimer="true" CtrlButtons="Play, Stop"
Loop="false">

</LightBox:C1LightBoxExtender>
```

The **CtrlButtons** option is set to "Play" and "Stop" so the images can be played like a slideshow.

### What You've Accomplished

Press **F5** to run your application, click an image, and notice that **Play** and **Stop** buttons appear above the upper-right corner of the image. If you click the **Play** button, the images will begin playing automatically. Click the **Pause** or **Stop** buttons to stop the slideshow.

## LightBox Animation at Run Time

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > LightBox Animation at Run Time

The C1LightBoxExtender can display transition animation effects when the user moves from one lightbox item to the next. In this example you'll add a lightbox control and two drop-down boxes that can be used to set the transition animation at run time.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1LightBox" TagPrefix="LightBox" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content and set the lightbox extender:

```
<asp:Panel ID="Panel1" runat="server">

```

```

```

```

```

```

```

```
</asp:Panel>
```

```
<LightBox:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
TargetControlID="Panel1" Player="Img" TextPosition="TitleOverlay">
```

```
</LightBox:C1LightBoxExtender>
```

5. Add the following markup just below the lightbox markup to add two drop-down boxes with animation options:

```
<label>Animation</label> <select id="animation" class='option'>
```

```
<option value="fade" selected='true'>fade</option>
```

```
<option value="slide">slide</option>
```

```
<option value="none">none</option>
```

```
</select>
```

```
<label>Slide Direction</label> <select id="direction" class='option'>
```

```
<option value="horizontal" selected='true'>horizontal</option>
```

```
<option value="vertical">vertical</option>
```

```
</select>
```

Add the following script to the page to initialize the lightbox and the drop-down boxes:

```
<script type="text/javascript">
```

```
$(function () {
```

```
$('#option').change(function () {
```

```
$('#<%=Panel1.ClientID%>').wijlightbox('option', {
```

```
transAnimation: { animated: $('#animation').val() },
```

```
slideDirection: $('#direction').val()
```

```
});
```

```
});

});

</script>
```

You can change the animation style by setting the **TransAnimation.Animated** property to "None", "Slide", or "Fade". **TransAnimation.Easing** determines the easing style to animate. **TransAnimation.Duration** determines the time span to animate. For the slide animation, you can also change the slide direction by setting the **SlideDirection** property to "Horizontal" or "Vertical".

### What You've Accomplished

Press **F5** to run your application, select an options from the **Animation** and **Slide Direction** drop-down boxes, and click a thumbnail image, click the **Next** or **Previous** button in the displayed image to view how the transition animation appears.

## Displaying External Content in the LightBox

Wijmo Control Toolkit Extender Controls > C1LightBoxExtender > Displaying External Content in the LightBox

The C1LightBoxExtender supports displaying the content of URL in an iFrame. In this example you'll set the **Player** property to "iframe" and display a Web site in the lightbox.

Complete the following steps:

1. Create a new ASP.NET Web application.
2. In the Solution Explorer, right-click the project and choose Add Reference. Locate and add a reference to the C1.Web.Wijmo.Extenders assembly.
3. Switch to Source view, and add the following markup at the top of the page to register the assembly:

```
<%@ Register Assembly="C1.Web.Wijmo.Extenders.4"
Namespace="C1.Web.Wijmo.Extenders.C1LightBox" TagPrefix="LightBox" %>
```

Note that you may need to edit the above depending on the assembly you are using.

4. Add the following markup within the main <div> tag to add a Panel with content:

```
<asp:Panel ID="Panel1" runat="server">
```

```

```

```

```

```

```

```

```

```
</asp:Panel>
```

The above markup adds two Web sites to the panel's content.

5. Add the following markup just below the Panel markup to set the lightbox extender:

```
<LightBox:C1LightBoxExtender ID="Panel1_C1LightBoxExtender" runat="server"
TargetControlID="Panel1" Player="Iframe" MaxWidth="960" MaxHeight="600">

</LightBox:C1LightBoxExtender>
```

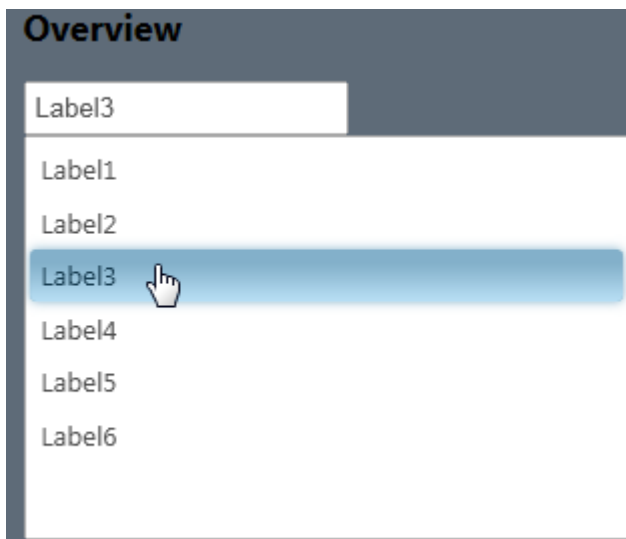

The **Player** option is set to "iframe" so the Web site content will be displayed.

### What You've Accomplished

Press **F5** to run your application, click an image, and notice that a Website is displayed in the lightbox. You can interact with the Web site within the lightbox or choose another Web site to view.

## C1ListExtender

The C1ListExtender control allows users to select one or more items from a list.

### ListExtender Markup

The following markup creates a C1ListExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1ListExtender ID="Panel1_ListExtender" runat="server"

 TargetControlID="Panel1">

</cc1:C1ListExtender>
```

# C1ListExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1ListExtender > C1ListExtender Tutorial

This tutorial demonstrates how to attach the C1ListExtender control to a **Panel** control and customize the list by setting the extender properties.

## Step 1 of 3: Creating the List

Wijmo Control Toolkit Extender Controls > C1ListExtender > C1ListExtender Tutorial > Step 1 of 3: Creating the List

In this topic you will add content to a **Panel** control.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the Tasks menu.
3. In the Extender Wizard, select C1ListExtender and click OK. A C1ListExtender control is added to the page and the TargetControlID is set to Panel1.
4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select TextBox1\_C1InputDateExtender.
6. Click the ellipsis button next to the C1ListExtender.ListItems property and add six members (Members 0-5). Set the Label and Value properties for each member as follows:

Member	Label	Value
0	Label1	Value1
1	Label2	Value2
2	Label3	Value3
3	Label4	Value4
4	Label5	Value5
5	Label6	Value6

The markup should look similar to the following:

```
<cc1:C1ListExtender ID="Panel1_C1ListExtender" runat="server"
```

```
TargetControlID="Panel1">
```

```
<ListItems>
```

```
<cc1:ListItem Label="Label1" Value="Value1" />
```

```
<cc1:ListItem Label="Label2" Value="Value2" />
```

```

 <cc1:ListItem Label="Label3" Value="Value3" />

 <cc1:ListItem Label="Label4" Value="Value4" />

 <cc1:ListItem Label="Label5" Value="Value5" />

 <cc1:ListItem Label="Label6" Value="Value6" />

 </ListItems>

</cc1:C1ListExtender>

```

Now you can begin setting properties for the C1ListExtender to format the list.

## Step 2 of 3: Customizing the List

Wijmo Control Toolkit Extender Controls > C1ListExtender > C1ListExtender Tutorial > Step 2 of 3: Customizing the List

In this topic you will set some of the properties for the C1ListExtender.

1. In the Visual Studio Properties window, click the drop-down list at the top of the Properties window and select C1ListExtender.
2. Set the C1ListExtender.AutoSize property to True.
3. Set the C1ListExtender.MaxItemCount property to 3.
4. Set the Theme property to rocket. The markup for the C1ListExtender will now look like this:

```

<cc1:C1ListExtender ID="Panel1_C1ListExtender" runat="server"

 TargetControlID="Panel1" AutoSize="True" MaxItemCount="3">

 <ListItems>

 <cc1:ListItem Label="Label1" Value="Value1" />

 <cc1:ListItem Label="Label2" Value="Value2" />

 <cc1:ListItem Label="Label3" Value="Value3" />

 <cc1:ListItem Label="Label4" Value="Value4" />

 <cc1:ListItem Label="Label5" Value="Value5" />

 <cc1:ListItem Label="Label6" Value="Value6" />

 </ListItems>

</cc1:C1ListExtender>

```

Now run the project to see the formatted list.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1ListExtender > C1ListExtender Tutorial > Step 3 of 3:  
Running the Project

Press **F5** to run the project and view the following:

- Only three list items are visible at a time. You can scroll the list to view the other items.
- The list is formatted with the rocket theme.

## Multiple Selection in a List

Wijmo Control Toolkit Extender Controls > C1ListExtender > Multiple Selection in a List

The **C1ListExtender** control supports the multiple selection of list items.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Click the Panel smart tag and select Add Extender from the Tasks menu.
4. In the Extender Wizard, select C1ListExtender and click OK. A C1ListExtender control is added to the page and the TargetControlID is set to Panel1.
5. Select View | Properties Window in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select TextBox1\_C1ListExtender.
7. Click the ellipsis button next to the C1ListExtender.ListItems property and add six members (Members 0-5). Set the Label and Value properties for each member as follows:

Member	Label	Value
0	Label1	Value1
1	Label2	Value2
2	Label3	Value3
3	Label4	Value4
4	Label5	Value5
5	Label6	Value6

8. The markup should look similar to the following:

```
<cc1:C1ListExtender ID="Panel1_C1ListExtender" runat="server"
 TargetControlID="Panel1">

 <ListItems>

 <cc1:ListItem Label="Label1" Value="Value1" />

 <cc1:ListItem Label="Label2" Value="Value2" />

 <cc1:ListItem Label="Label3" Value="Value3" />

 <cc1:ListItem Label="Label4" Value="Value4" />

 <cc1:ListItem Label="Label5" Value="Value5" />

 <cc1:ListItem Label="Label6" Value="Value6" />

 </ListItems>

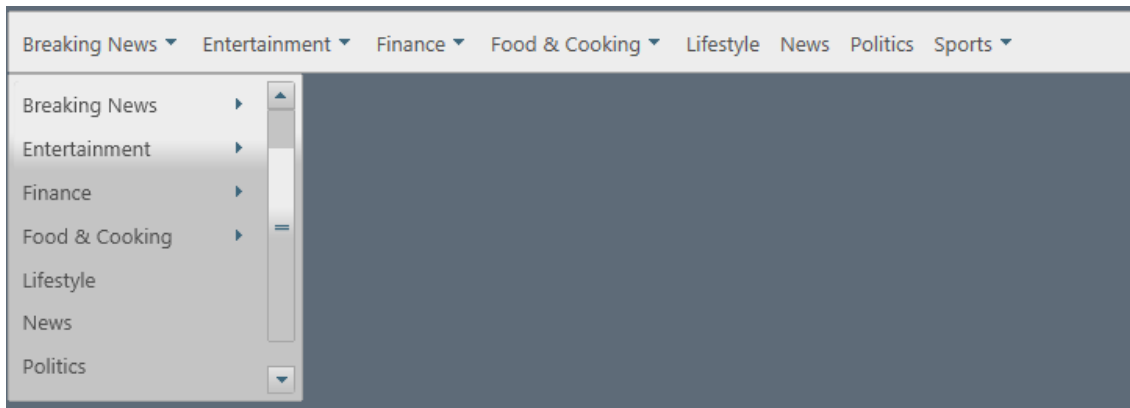

</cc1:C1ListExtender>
```

9. Set the C1ListExtender.SelectionMode property to Multiple.  
 10. Press F5 to run the application. Select multiple list items.

## C1MenuExtender

Create multi-level menus with animation effects, images and check box items, interactive item scrolling, and more using the C1MenuExtender. You can even create a pop-up menu for context help within your application.

### C1MenuExtender Markup

The following markup creates C1MenuExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1MenuExtender ID="Panel1_C1MenuExtender" runat="server"
 TargetControlID="Panel1">
 <hideanimation>
 <animated effect="fade">
 </animated>
 </hideanimation>
 <slidinganimation easing="">
 </slidinganimation>
</cc1:C1MenuExtender>
```

## C1Menu Extender Tutorial

Wijmo Control Toolkit Extender Controls > C1MenuExtender > C1Menu Extender Tutorial

This tutorial demonstrates how to attach the C1MenuExtender control to a **Panel** control and customize the menu by setting the extender properties.

### Step 1 of 4: Creating the Menu

Wijmo Control Toolkit Extender Controls > C1MenuExtender > C1Menu Extender Tutorial > Step 1 of 4: Creating the Menu

In this topic you will add list content to a **Panel** control. The list will eventually become menu items.

1. In your Web application, add a standard Panel control to the main content of your page.
2. Add some content for the list. For example:

```
<asp:Panel ID="Panel1" runat="server">

 Both please.

</asp:Panel>
```

Now you can associate a C1MenuExtender control with the **Panel**.

## Step 2 of 4: Adding a C1MenuExtender to the Page

Wijmo Control Toolkit Extender Controls > C1MenuExtender > C1Menu Extender Tutorial > Step 2 of 4: Adding a C1MenuExtender to the Page

In this step, you will add a C1MenuExtender control to associate with the **Panel**.

1. Click the Panel smart tag and select Add Extender from the Panel Tasks menu.
2. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel1. The markup looks like this:

```
<cc1:C1MenuExtender ID="Panel1_C1MenuExtender" runat="server">
```

```
TargetControlID="Panel1">

<hideanimation>

 <animated effect="fade">

 </animated>

</hideanimation>

<slidinganimation easing="">

</slidinganimation>

</cc1:C1MenuExtender>
```

Now you can begin setting properties for the C1MenuExtender to format the list.

## Step 3 of 4: Customizing the Menu

Wijmo Control Toolkit Extender Controls > C1MenuExtender > C1Menu Extender Tutorial > Step 3 of 4: Customizing the Menu

In this topic you will set some of the properties for the C1MenuExtender.

1. In the Visual Studio Properties window, click the drop-down list at the top of the Properties window and select Panel1\_C1MenuExtender.
2. Set the C1MenuExtender.TriggerEvent property to Rtclick.
3. Set the C1MenuExtender.Orientation property to Vertical. The markup for the C1MenuExtender will now look like this:

```
<cc1:C1MenuExtender ID="Panel1_C1MenuExtender" runat="server"

 TargetControlID="Panel1" TriggerEvent="Rtclick" Orientation="Vertical">

<hideanimation>

 <animated effect="fade">

 </animated>

</hideanimation>

<slidinganimation easing="">

</slidinganimation>

</cc1:C1MenuExtender>
```

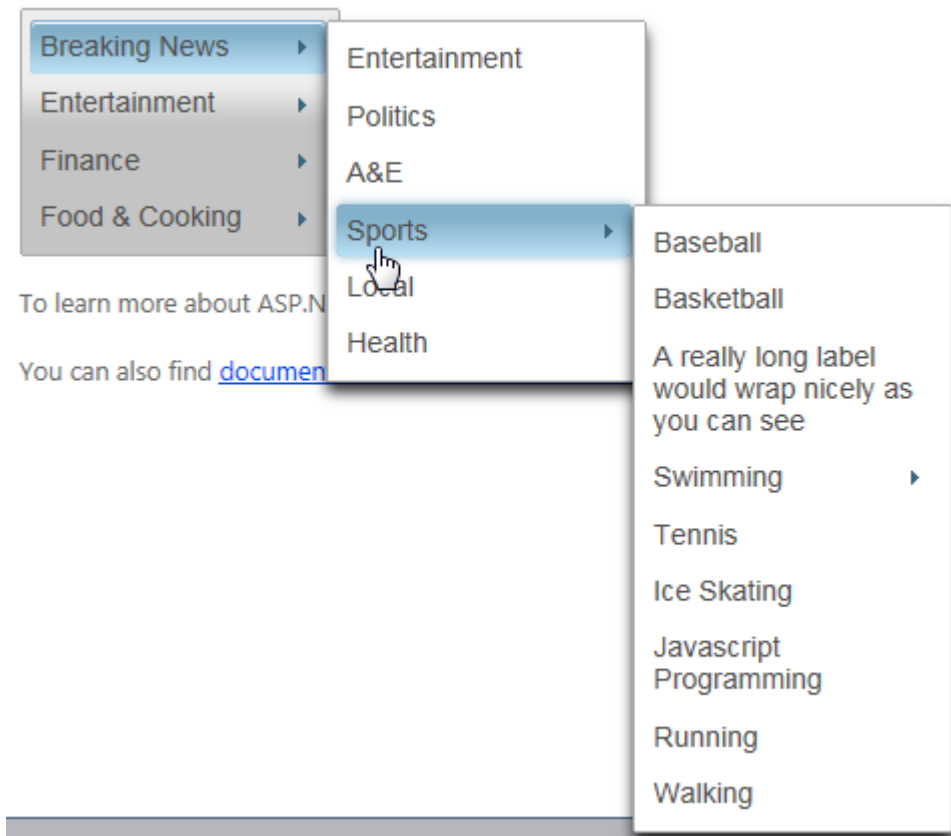

4. Now run the project to see the formatted menu.

## Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1MenuExtender > C1Menu Extender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- The menu runs vertically down the left side of the page instead of horizontally.
- Right-click to open a menu item.

## Using Custom Icons

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Using Custom Icons

The C1MenuExtender control supports using custom icons in the menu. You will use special markup to apply the icons to the C1MenuExtender control.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create a list that will become the menu.

```
<ul id="menu1">
```

```
<a><span class="ui-icon ui-icon-arrowthick-1-w wijmo-wijmenu-icon-
left">
```

```
Menu1
```

```
<a><span class="ui-icon ui-icon-arrowrefresh-1-s wijmo-wijmenu-icon-

<a><span class="ui-icon ui-icon-minusthick wijmo-wijmenu-icon-
left">Menu8

```

Click the Panel smart tag and select Add Extender from the Tasks menu.

4. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel1.
5. Press F5 to run the application. Notice the custom icon next to each menu item.

## Changing the Menu's Orientation

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Changing the Menu's Orientation

The C1MenuExtender control supports using custom icons in the menu. You will use special markup to apply the icons to the C1MenuExtender control.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create a list that will become the menu.

```

<ul id="menu2">

4. Click the Panel smart tag and select Add Extender from the Tasks menu.
5. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel1.
6. Select View | Properties Window in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select Panel1\_C1MenuExtender.
8. Set the C1MenuExtender.Orientation property to Vertical.
9. Press F5 to run the application. The menu appears vertically rather than horizontally.

# Setting Menu Functions

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Setting Menu Functions

The C1MenuExtender control allows you to set certain events.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create a list that will become the menu.

```
<ul id="menu1">

4. Click the Panel smart tag and select Add Extender from the Tasks menu.
5. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel1.
6. Select View | Properties Window in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select Panel1\_C1MenuExtender.
8. Set the C1MenuExtender.Orientation property to Vertical.
9. Press F5 to run the application. The menu appears vertically rather than horizontally.

## Setting Menu Triggers

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Setting Menu Triggers

You can change the trigger that opens the submenus. For this tutorial, we will be using a right click to trigger the submenus to open.

Complete the following steps:

1. Create an ASP.NET Web application.
2. Add a standard Panel to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create a list that will become the menu.

```
<ul id="menu1">

 MenuItem
```

4. Click the Panel smart tag and select Add Extender from the Tasks menu.
5. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel.
6. Select View | Properties Window in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select Panel1\_C1MenuExtender.
8. Set the C1MenuExtender.Trigger property to .wijmo-wijmenu-item.
9. Set the C1MenuExtender.TriggerEvent property to RtClick.
10. Press to run the application. Note that the submenus only appear when you right click on the main menu item.

## Working with Shortcuts

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Working with Shortcuts

You can create menus with shortcut menu items.

Complete the following steps:

1. Create an ASP.NET Web application.
2. Add a standard Panel to the main content of your page.

3. Add the following markup within the <asp:Panel> tags to create a list that will become the menu.

```
<ul id="menu1">

 File

 <div>

 New <span class="wijmo-
wijmenu-icon-right">Ctrl+N

 </div>

 <div>

 Open <span class="wijmo-
wijmenu-icon-right">Ctrl+O

 </div>

 <div>

 Save <span class="wijmo-
wijmenu-icon-right">Ctrl+S

 </div>

Edit

```

```

 <div>

 Undo <span class="wijmo-
wijmenu-icon-right">Ctrl+Z

 </div>

 <div>

 Cut <span class="wijmo-
wijmenu-icon-right">Ctrl+X

 </div>

 <div>

 Copy <span class="wijmo-
wijmenu-icon-right">Ctrl+C

 </div>

 <div>

 Paste <span class="wijmo-
wijmenu-icon-right">Ctrl+V

 </div>

```

4. Click the Panel smart tag and select Add Extender from the Tasks menu.

5. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel1.
6. Press F5 to run your program. The menu will contain shortcut items as in the following

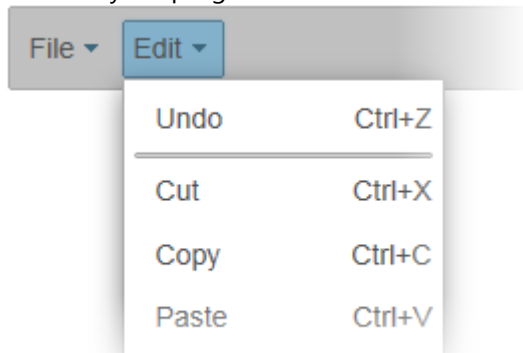

image.

## Changing the Position of the Submenus

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Changing the Position of the Submenus

You can specify where the menu and submenus open relative to a trigger. For this tutorial, we will be using a button click to open the menu and trigger the **Position** property.

Complete the following steps:

1. Create an ASP.NET Web application.
2. Add an input button to the main content of your page using the following markup:
3. `<input type="button" id="btn1" value="Click Here" />`
4. Add a standard Panel control to the main content of your page.
5. Add the following markup within the `<asp:Panel>` tags to create a list that will become the menu.

```
<ul id="wijmenu1">

 Breaking News

 Entertainment

 Finance

 Food & Cooking

 Lifestyle

 submenu

 News

 Politics
```

```
Sports
```

```

```

6. Click the Panel smart tag and select Add Extender from the Tasks menu.
7. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel1.
8. After the closing </asp:Panel> tag, add the following markup to create buttons that, when clicked, will perform the specified menu function.

```
<p>
```

```
<input type="button" id="previous" value="previous" />
```

```
<input type="button" id="next" value="next" />
```

```
<input type="button" id="previousPage" value="previousPage" />
```

```
<input type="button" id="nextPage" value="nextPage" />
```

```
</p>
```

9. After the markup for the buttons, add the following script which will call the client-side widget functions we want to perform:

```
<script type="text/javascript">
```

```
$(document).ready(function () {
 $("#previous").click(function () {
 $("#<%=Panel1.ClientID %>").focus().wijmenu("previous");
 });
 $("#next").click(function () {
 $("#<%=Panel1.ClientID %>").focus().wijmenu("next");
 });
 $("#previousPage").click(function () {
 $("#<%=Panel1.ClientID %>").focus().wijmenu("previousPage");
 });
 $("#nextPage").click(function () {
 $("#<%=Panel1.ClientID %>").focus().wijmenu("nextPage");
 });
});
```

```
</script>
```

10. In the HeadContent ContentPlaceholder, add links to the CDN, or the content delivery network that contains the dependencies required by the client-side wijmenu widget to access the events and methods that we'll be using in this example. The markup will look similar to the following, but make sure to visit the CDN to get the most recent version of the dependency files:

```
<asp:Content ID="HeaderContent" runat="server"
ContentPlaceHolderID="HeadContent">

<link href="http://cdn.wijmo.com/themes/rocket/jquery-wijmo.css" rel="stylesheet"

</asp:Content>
```

11. Press F5 to run the application. Click the Click Here button. The menu appears vertically and is aligned to the right of the bottom of the button.

## Using Menu Templates

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Using Menu Templates

The C1MenuExtender control supports using templates for menu items. In this topic, you will create a menu using a template.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Add the following markup within the `<asp:Panel>` tags to create a list that will become the menu.

```
<ul id="menu1">

 MenuItem

 Breaking News

 <li class="header">

 <li class="header">

```

4. Add the following markup within the first set of `<li class="header">` tags.

<Template>

```

<div>

 New <span class="wijmo-wijmenu-
icon-right">Ctrl+N

</div>

</Template>

```

5. Add the following markup within the second set of <li class="header"> tags.

```

<Template>

<div>

 Close <span class="wijmo-wijmenu-
icon-right">Ctrl+C

</div>

</Template>

```

6. Press **F5** to run your application. The menu should resemble the following image.

## Animating the Menu

Wijmo Control Toolkit Extender Controls > C1MenuExtender > Animating the Menu

The C1MenuExtender control supports using custom icons in the menu. You will use special markup to apply the icons to the C1MenuExtender control.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create a list that will become the menu.

```

<ul id="menu">

 <a>menuitem1

```

```
 <a>menuitem1a

 <a>menuitem2a

 <a>menuitem2

 <a>menuitem3
```

4. Click the Panel smart tag and select Add Extender from the Tasks menu.
5. In the Extender Wizard, select C1MenuExtender and click OK. A C1MenuExtender control is added to the page and the TargetControlID is set to Panel1.
6. Select View | Properties Window in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select Panel1\_C1MenuExtender.
8. Expand the Animation node.
9. Set the Animation.Duration property to 800.
10. Expand the Animated node and set Effect to bounce.
11. Press F5 to run the application. Click menuitem1 and notice the submenu bounces as it appears.

## C1PagerExtender

The C1PagerExtender control allows end-users to scan through elements or pages by clicking on a visible element. You can use several modes; for example, you can set it up to use a numeric paging system or a next/previous system.

### C1PagerExtender Markup

The following markup creates a C1PagerExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1PagerExtender ID="Panel1_C1PagerExtender" runat="server">
```

```
TargetControlID="Panel1">

</cc1:C1PagerExtender>
```

## C1PagerExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1PagerExtender > C1PagerExtender Tutorial

This tutorial demonstrates how to attach the C1PagerExtender control to a **Panel** control and customize paging by setting the extender properties.

### Step 1 of 3: Adding a Page Extender to the Project

Wijmo Control Toolkit Extender Controls > C1PagerExtender > C1PagerExtender Tutorial > Step 1 of 3: Adding a Page Extender to the Project

In this topic you will associate the C1PagerExtender with a **Panel** control to create a paging navigation system.

1. In your Web application, add a standard Panel control to the main content of your page.
2. In Source view, drag a C1PagerExtender control to the page.
3. Select the C1PagerExtender markup, and in the Visual Studio Properties window, set the TargetControlID property to Panel1. The markup will look like this:

```
<asp:Panel ID="Panel1" runat="server">

</asp:Panel>

<cc1:C1PagerExtender ID="Panel1_C1PagerExtender" runat="server"

TargetControlID="Panel1">

</cc1:C1PagerExtender>
```

Now you can begin setting properties for the C1PagerExtender.

### Step 2 of 3: Customizing Paging

Wijmo Control Toolkit Extender Controls > C1PagerExtender > C1PagerExtender Tutorial > Step 2 of 3: Customizing Paging

In this topic you will set some of the properties for the C1PagerExtender.

1. In the Visual Studio Properties window, click the drop-down list at the top of the Properties window and select PagerExtender.
2. Set the C1PagerExtender.PageCount property to 40.
3. Set the C1PagerExtender.Mode property to NumericFirstLast.
4. Set the C1PagerExtender.PageButtonCount property to 10. The markup for the C1PagerExtender will now look like this:

```
<cc1:C1PagerExtender ID="Panel1_C1PagerExtender" runat="server"
 TargetControlID="Panel1" Mode="NumericFirstLast" PageCount="40"
 PageButtonCount="10">
</cc1:C1PagerExtender >
```

5. Now run the project to see the formatted pager.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1PagerExtender > C1PagerExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the following:

- There are 40 pages in the total page count.
- Only 10 pages are shown at a time.
- Numbers are shown for each page and you can page through to the first or last page using the navigation buttons.

## Setting Pager Modes

Wijmo Control Toolkit Extender Controls > C1PagerExtender > Setting Pager Modes

C1PagerExtender supports four different modes for the control. This topic will take you through setting the different pager modes.

### Next Previous Mode

Wijmo Control Toolkit Extender Controls > C1PagerExtender > Setting Pager Modes > Next Previous Mode

**NextPrevious** mode is comprised of two directional buttons that will allow you to move to the next page or to the previous page.

1. Create a new ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Click the Panel control smart tag to open the Panel Tasks menu and click Add Extender.
4. Use the Extender Wizard to add a C1PagerExtender to your page.
5. Go to View | Properties and use the Properties drop-down menu to view the Panel1\_C1PagerExtender properties.
6. Locate the C1PagerExtender.Mode property and use the drop-down menu to set it to NextPrevious.
7. Press F5 to run your application. It should resemble the following image:

## NextPreviousFirstLast Mode

Wijmo Control Toolkit Extender Controls > C1PagerExtender > Setting Pager Modes > NextPreviousFirstLast Mode

**NextPreviousFirstLast** mode is comprised of four directional buttons: two that allow you to move page-by-page, and two that are direct links to the first page and to the last page:

1. Create a new ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Click the Panel control smart tag to open the Panel Tasks menu and click Add Extender.
4. Use the Extender Wizard to add a C1PagerExtender to your page.
5. Go to View | Properties and use the Properties drop-down menu to view the Panel1\_C1PagerExtender properties.
6. Locate the C1PagerExtender.Mode property and use the drop-down menu to set it to NextPreviousFirstLast.
7. Press F5 to run your application. It should resemble the following image:

## Numeric Mode

Wijmo Control Toolkit Extender Controls > C1PagerExtender > Setting Pager Modes > Numeric Mode

**Numeric** mode creates a set of numbered buttons that allow you to move page-by-page.

1. Create a new ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Click the Panel control smart tag to open the Panel Tasks menu and click Add Extender.
4. Use the Extender Wizard to add a C1PagerExtender to your page.
5. Go to View | Properties and use the Properties drop-down menu to view the Panel1\_C1PagerExtender properties.
6. Locate the C1PagerExtender.Mode property and use the drop-down menu to set it to Numeric.
7. Press F5 to run your application. It should resemble the following image:

## Numeric First Last Mode

Wijmo Control Toolkit Extender Controls > C1PagerExtender > Setting Pager Modes > Numeric First Last

Mode

**NumericFirstLast** mode creates a set of numbered buttons and two buttons that are direct links to the first page and to the last page.

1. Create a new ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Click the Panel control smart tag to open the Panel Tasks menu and click Add Extender.
4. Use the Extender Wizard to add a C1PagerExtender to your page.
5. Go to View | Properties and use the Properties drop-down menu to view the Panel1\_C1PagerExtender properties.
6. Locate the C1PagerExtender.Mode property and use the drop-down menu to set it to NumericFirstLast.
7. Press F5 to run your application. It should resemble the following image:

## C1Progress Bar Extender

Let end-users know the progress of an operation with the C1ProgressBarExtender control. You can easily customize the look of the indicator with animations, styles, labels, and more.

### C1ProgressBarExtender Markup

The following markup creates a C1ProgressBarExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1ProgressBarExtender ID="Panel1_C1ProgressBarExtender" runat="server"
 TargetControlID="Panel1">
```

```
<animationoptions easing="">

</animationoptions>

</cc1:C1ProgressBarExtender>
```

## C1ProgressBarExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1Progress Bar Extender > C1ProgressBarExtender Tutorial

This tutorial demonstrates how to attach the C1ProgressBarExtender control to a **Panel** control and customize how the progress bar is filled.

### Step 1 of 3: Adding a C1ProgressBarExtender to the Project

Wijmo Control Toolkit Extender Controls > C1Progress Bar Extender > C1ProgressBarExtender Tutorial > Step 1 of 3: Adding a C1ProgressBarExtender to the Project

In this topic you will associate the C1ProgressBarExtender with a **Panel** control to create a progress bar.

1. In your Web application, add a standard **Panel** control to the main content of your page.
2. In Source view, drag a C1ProgressBarExtender control to the page.
3. Select the C1ProgressBarExtender markup, and in the Visual Studio Properties window, set the **TargetControlID** property to **Panel1**. The markup will look like this:

```
<asp:Panel ID="Panel1" runat="server" >

</asp:Panel>

<cc1:C1ProgressBarExtender ID="Panel1_C1ProgressBarExtender" runat="server"
 TargetControlID="Panel1">

</cc1:C1ProgressBarExtender>
```

Now you can begin setting properties for the C1ProgressBarExtender.

### Step 2 of 3: Customizing the Progress Bar

Wijmo Control Toolkit Extender Controls > C1Progress Bar Extender > C1ProgressBarExtender Tutorial > Step 2 of 3: Customizing the Progress Bar

In this topic you will set some of the properties for the C1ProgressBarExtender.

1. In the Visual Studio Properties window, click the drop-down list at the top of the Properties window and select **Panel1\_C1ProgressBarExtender**.
2. Set the C1ProgressBarExtender.FillDirection property to North. This will create a vertical progress bar that fills from South (bottom) to North (top). By default, the C1ProgressBarExtender.FillDirection property is set to East; therefore, the progress bar fills from West (right) to East (left) and is horizontal.
3. Set the C1ProgressBarExtender.Value property to 75.
4. Set the C1ProgressBarExtender.Tooltip property to {1} percent. The markup for the C1ProgressBarExtender will now look like this:

```
<cc1:C1ProgressBarExtender ID="Panel1_C1ProgressBarExtender" runat="server"
 TargetControlID="Panel1" ToolTip="{1} percent" Value="75">

</cc1:C1ProgressBarExtender>
```

5. Now run the project to see the formatted progress bar.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1Progress Bar Extender > C1ProgressBarExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the following:

- The progress bar fills from bottom to top and stops at 75 percent.
- Mouse over the progress bar and notice the tooltip shows "75 percent".

## Changing the Fill Direction of the Progress Bar

Wijmo Control Toolkit Extender Controls > C1Progress Bar Extender > Changing the Fill Direction of the Progress Bar

The **C1ProgressBarExtender** control allows you to change the direction in which the progress bar fills up. Options include *east* (left-to-right), *west* (right-to-left), *north* (bottom-to-top), and *south* (top-to-bottom) . Simply set the **FillDirection** property to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.

3. Click the Panel smart tag and select **Add Extender** from the Tasks menu.
4. In the Extender Wizard, select **C1ProgressBarExtender** and click **OK**. A C1ProgressBarExtender control is added to the page and the TargetControlID is set to Panel1.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **Panel1\_C1ProgressBarExtender**.
7. Set the **C1ProgressBarExtender.FillDirection** property to North.
8. Set the **C1ProgressBarExtender.Value** property to 75.

The markup should now look similar to the following:

```
<asp:Panel ID="Panel1" runat="server">

 </asp:Panel>

 <cc1:C1ProgressBarExtender ID="Panel1_C1ProgressBarExtender" runat="server"

 FillDirection="North" TargetControlID="Panel1" Value="75">

 </cc1:C1ProgressBarExtender>
```

9. Press **F5** to run the application. You'll see the progress bar fill from bottom-to-top. If you set the **FillDirection** property to east or west, the bar will be horizontal.

## C1RatingExtender

The C1RatingExtender control allows you to generate customizable star rating widgets automatically.

### RatingExtender Markup

The following markup creates a C1RatingExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1RatingExtender ID="DropDownList1_C1RatingExtender" runat="server"

 TargetControlID="DropDownList2">

</cc1:C1RatingExtender>
```

## C1RatingExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1RatingExtender > C1RatingExtender Tutorial

This tutorial demonstrates how to attach the C1RatingExtender control to a **DropDownList** control and customize the star rating.

## Step 1 of 3: Adding a C1RatingExtender to the Page

Wijmo Control Toolkit Extender Controls > C1RatingExtender > C1RatingExtender Tutorial > Step 1 of 3: Adding a C1RatingExtender to the Page

1. In this topic you add some content to a DropDownList control and associate a C1RatingExtender control with it to create a rating.
2. In your Web application, add a standard DropDownList control to the main content of your page.
3. Click the DropDownList smart tag and select Add Extender from the DropDownList Tasks menu.
4. In the Extender Wizard, select C1RatingExtender and click OK. A C1RatingExtender control is added to the page and the TargetControlID is set to DropDownList1.

```
<cc1:C1RatingExtender ID="DropDownList1_C1RatingExtender" runat="server"
 TargetControlID="DropDownList1">
</cc1:C1RatingExtender>
```

In the next step you will set some of the extender properties.

## Step 2 of 3: Customizing the C1RatingExtender

Wijmo Control Toolkit Extender Controls > C1RatingExtender > C1RatingExtender Tutorial > Step 2 of 3: Customizing the C1RatingExtender

In this topic you will set some of the properties for the C1RatingExtender.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1\_C1RatingExtender**.
3. Set the **C1RatingExtender.Count** property to **4**. When the application runs, there will be **4** stars for the rating control.
4. Set the **C1RatingExtender.TotalValue** property to **4**. Each star will have a value of 1 point.
5. Set the **C1RatingExtender.Split** property to **2**. Each star will have two halves, each half is worth .5 points.
6. Set the **C1RatingExtender.Value** property to **2**. The C1RatingExtender control will start out with a rating of 2 shaded stars.

Now run the project to see the star rating.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1RatingExtender > C1RatingExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the star rating. Notice the rating starts out with 2 shaded stars. Each of the 4 stars is made up of two halves; each half is worth .5 points.

## Animating C1RatingExtender

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Animating C1RatingExtender

1. Create a new ASP.NET Web application.
2. Add a standard DropDownList control to the main content of your page.
3. Click the DropDownList smart tag and choose **Add Extender** from the **DropDownList Tasks** menu.
4. In the Extender Wizard, select the **C1RatingExtender** from the list and click **OK**. A C1RatingExtender control is added to the page and the TargetControlID is set to DropDownList1.
5. Select **View | Properties** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **DropDownList1\_C1RatingExtender**.
7. Set the **C1RatingExtender.RatingAnimation > Animated** property to bounce.
8. Press **F5** to run your application. When you click on the stars to enter a rating, they should bounce before returning the rated value.

## Using C1Rating Extender Events

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Using C1Rating Extender Events

Create a new ASP.NET Web application.

1. Add a standard Panel control to the main content of your page and set the ID to ratingDiv.
2. Click the Panel smart tag and choose **Add Extender** from the Panel Tasks menu.
3. In the Extender Wizard, select the C1RatingExtender from the list and click OK. A C1RatingExtender control is added to the page and the TargetControlID is set to ratingDiv.
4. Select **View | Properties** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **ratingDiv\_C1RatingExtender**.
6. Set the **C1RatingExtender.OnClientHover** event to starHover.
7. Set the **C1RatingExtender.OnClientRated** event to starRated.

8. Add the following script to the first set of <asp:Content> tags.

```
<script type="text/javascript">

 function starHover(e, args) {

 $("#hover").html(args.value);

 }

 function starRated(e, args) {

 $("#rated").html(args.value);

 }

</script>
```

9. Add the following markup to the second set of <asp:Content> tags, after the closing </div> tag.

```
<div>hover value is:<label id="hover"> </label> </div>
```

```
<div>rated value is:<label id="rated"> </label> </div>
```

10. Press F5 to run your application. Click on the stars to use the rating control. The events should fire and the page should resemble the following image.

hover value is:5  
rated value is:4.5

## Setting Customized C1RatingExtender Icons

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Setting Customized C1RatingExtender Icons

C1RatingExtender supports customized icons. There are four different icon sets available with the C1RatingExtender control.

## Setting the String 24 Icons

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Setting Customized C1RatingExtender Icons > Setting the String 24 Icons

The string 24 icon set is comprised of a string of stars.

1. Create a new ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.

3. Click the Panel smart tag and choose **Add Extender** from the Panel Tasks menu.
4. In the Extender Wizard, select the C1RatingExtender and click OK. A C1RatingExtender control is added to the page and the TargetControlID is set to Panel1.
5. Select **View | Properties** from the Visual Studio menu and navigate to the **C1RatingExtender.Icons** property.
6. Use the arrow to expand the C1RatingExtender.Icons > HoverIconsClass property and set the HoverIconsClass > IconClass property to wijmo-wijrating-hover-24.
7. Use the arrow to expand the C1RatingExtender.Icons > IconsClass property and set the IconsClass > IconClass property to wijmo-wijrating-normal-24.
8. Use the arrow to expand the C1RatingExtender.Icons > RatedIconsClass property and set the RatedIconsClass > IconClass property to wijmo-wijrating-rated-24.
9. In the Properties window, navigate to the **C1RatingExtender.IconHeight** property and set it to **24**.
10. Navigate to the **C1RatingExtender.IconWidth** property and set it to **24**.
11. Press F5 to run your application. The stars should appear as in the following image:

## Setting the String 32 Icons

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Setting Customized C1RatingExtender Icons > Setting the String 32 Icons

The String 32 icons are another icon set comprised of a string of stars, larger than both the normal star rating string and the string 24 stars.

1. Create a new **ASP.NET Web** application.
2. Add a standard Panel control to the main content of your page.
3. Click the Panel smart tag and choose **Add Extender** from the **Panel Tasks** menu.
4. In the Extender Wizard, select the C1RatingExtender and click OK. A **C1RatingExtender** control is added to the page and the TargetControlID is set to Panel1.
5. Select **View | Properties** from the Visual Studio menu and navigate to the Icons property.
6. Use the arrow to expand the C1RatingExtender.Icons > HoverIconsClass property and set the HoverIconsClass > IconClass property to wijmo-wijrating-hover-32.
7. Use the arrow to expand the C1RatingExtender.Icons > IconsClass property and set the IconsClass > IconClass property to wijmo-wijrating-normal-32.
8. Use the arrow to expand the C1RatingExtender.Icons > RatedIconsClass property and set the RatedIconsClass > IconClass property to wijmo-wijrating-rated-32.
9. In the Properties window, navigate to the C1RatingExtender.IconHeight property and set it to 32.
10. Navigate to the C1RatingExtender.IconWidth property and set it to 32.
11. Press F5 to run your application. The stars should appear as in the following image:

## Setting the Thumb Icons

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Setting Customized C1RatingExtender Icons > Setting the Thumb Icons

The thumbs icons can be used to rate items with a simple thumbs up or thumbs down rating system.

1. Create a new ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Click the Panel smart tag and choose **Add Extender** from the Panel Tasks menu.
4. In the Extender Wizard, select the C1RatingExtender and click OK. A C1RatingExtender control is added to the page and the TargetControlID is set to Panel1.
5. Select **View | Properties** from the Visual Studio menu and navigate to the **C1RatingExtender.Icons** property.
6. Use the arrow to expand the C1RatingExtender.Icons > HoverIconsClass property and set the HoverIconsClass > IconClass property to wijmo-wijrating-hover-thumbdown,wijmo-wijrating-hover-thumbup.
7. Use the arrow to expand the C1RatingExtender.Icons > IconsClass property and set the IconsClass > IconClass property to wijmo-wijrating-normal-thumbdown,wijmo-wijrating-normal-thumbup.
8. Use the arrow to expand the C1RatingExtender.Icons > RatedIconsClass property and set the RatedIconsClass > IconClass property to wijmo-wijrating-rated-thumbdown,wijmo-wijrating-rated-thumbup.
9. In the Properties window, navigate to the **C1RatingExtender.IconHeight** property and set it to **16**.
10. Navigate to the **C1RatingExtender.IconWidth** property and set it to **16**.
11. Set the **C1RatingExtender.RatingMode** to Single.
12. Press **F5** to run your application. The thumbs should appear as in the following image:

## Setting Bar Array Icons

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Setting Customized C1RatingExtender Icons > Setting Bar Array Icons

Create a new ASP.NET Web application.

1. Add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and choose **Add Extender** from the Panel Tasks menu.
3. In the Extender Wizard, select the C1RatingExtender and click OK. A C1RatingExtender control is added to the page and the TargetControlID is set to Panel1.
4. Select **View | Properties** from the Visual Studio menu and navigate to the **C1RatingExtender.Icons** property.
5. Use the arrow to expand the C1RatingExtender.Icons > HoverIconsClass property and set the HoverIconsClass > IconsClass property to wijmo-wijrating-hover-bar-11,wijmo-wijrating-hover-bar-21,wijmo-wijrating-hover-bar-31,wijmo-wijrating-hover-bar-41,wijmo-wijrating-hover-bar-51,wijmo-wijrating-hover-bar-61.

6. Use the arrow to expand the **C1RatingExtender.Icons > IconsClass** property and set the **IconsClass > IconsClass** property to `wijmo-wijrating-normal-bar-11,wijmo-wijrating-normal-bar-21,wijmo-wijrating-normal-bar-31,wijmo-wijrating-normal-bar-41,wijmo-wijrating-normal-bar-51,wijmo-wijrating-normal-bar-61`.
7. Use the arrow to expand the **C1RatingExtender.Icons > RatedIconsClass** property and set the **RatedIconsClass > IconsClass** property to `wijmo-wijrating-rated-bar-11,wijmo-wijrating-rated-bar-21,wijmo-wijrating-rated-bar-31,wijmo-wijrating-rated-bar-41,wijmo-wijrating-rated-bar-51,wijmo-wijrating-rated-bar-61`.
8. In the Properties window, navigate to the **C1RatingExtender.IconHeight** property and set it to **61**.
9. Navigate to the **C1RatingExtender.IconWidth** property and set it to 11.
10. Press **F5** to run your application. The bar array should appear as in the following image:

## Setting Customized C1RatingExtender Hints

Wijmo Control Toolkit Extender Controls > C1RatingExtender > Setting Customized C1RatingExtender Hints

C1RatingExtender allows you to set custom hints that appear when a user hovers over the rating string or array.

1. Create a new **ASP.NET Web** application.
2. Add a standard **Panel** control to the main content of your page.
3. Click the Panel smart tag and choose **Add Extender** from the Panel Tasks menu.
4. In the **Extender Wizard**, select the **C1RatingExtender** and click **OK**. A **C1RatingExtender** control is added to the page and the TargetControlID is set to Panel1.
5. Select **View | Properties** from the Visual Studio menu and navigate to the **C1RatingExtender.Hint** property.
6. In the C1RatingExtender.Hint > Content property, click the ellipsis button to open the **String Collection Editor**. This is where you will enter the content for your hints.
7. For this topic, select five words that will serve as your hints, enter them in the **String Collection Editor**, and click **OK**.
8. Press **F5** to run your application. Hover over one of the stars to make the hint appear.

## C1Slider Extender

The C1SliderExtender control simplifies user input by providing a rich visual representation of numeric changes. The **C1SliderExtender** is a sliding selector that provides a simple, familiar way for end-users to choose a single value or a range of values in a predefined range at run time.

### C1SliderExtender Markup

The following markup creates C1SliderExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1SliderExtender ID="TextBox1_C1SliderExtender" runat="server"
 TargetControlID="TextBox1">
</cc1:C1SliderExtender>
```

## C1SliderExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1Slider Extender > C1SliderExtender Tutorial

This tutorial demonstrates how to attach the C1SliderExtender control to a **TextBox** control and create a range between two values.

## Step 1 of 3: Adding a C1SliderExtender to the Project

Wijmo Control Toolkit Extender Controls > C1Slider Extender > C1SliderExtender Tutorial > Step 1 of 3: Adding a C1SliderExtender to the Project

In this topic you will associate the C1SliderExtender with a **TextBox** control to create a range between values.

1. In your Web application, add a standard TextBox control to the main content of your page and set the Width to 300 and Text to "100; 400".
2. In Source view, drag a C1SliderExtender control to the page.
3. Select the C1SliderExtender markup, and in the Visual Studio Properties window, set the TargetControlID property to TextBox1. The markup will look like this:

```
<cc1:C1SliderExtender ID="SliderExtender1" runat="server"
 TargetControlID="TextBox1">
</cc1:C1SliderExtender>
```

Now you can begin setting properties for the C1SliderExtender.

## Step 2 of 3: Customizing the Slider Bar

Wijmo Control Toolkit Extender Controls > C1Slider Extender > C1SliderExtender Tutorial > Step 2 of 3: Customizing the Slider Bar

In this topic you will set some of the properties for the C1SliderExtender.

1. In the Visual Studio Properties window, click the drop-down list at the top of the Properties window and select **C1SliderExtender1**.
2. Set the **C1SliderExtender.Range** property to True. This will create a styleable range element between the two text values, 100 and 400, you set in the TextBox in Step 1.
3. Set the **C1SliderExtender.Max** property to **500** to set the maximum value on the slider. The markup for the C1SliderExtender will now look like this

```
<cc1:C1SliderExtender ID="SliderExtender1" runat="server"
 TargetControlID="TextBox1" Range="True" Max="500">

</cc1:C1SliderExtender>
```

Now run the project to see the formatted slider.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1Slider Extender > C1SliderExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the following:

- The slider shows two handles at 100 and 400 as specified in the text box.
- The background of the range is a different color to show those values are selected.
- The maximum value of the slider is 500.

## Setting C1SliderExtender's Thumbs

Wijmo Control Toolkit Extender Controls > C1Slider Extender > Setting C1SliderExtender's Thumbs

C1SliderExtender supports setting bounds. This allows users to set an upper bound and a lower bound by inputting two values.

1. Create a new ASP.NET Web application.
2. In your Web application, add a standard TextBox control to the main content of your page.
3. In Source View, drag a C1SliderExtender control to the page.
4. Select **View | Properties** from the Visual Studio menu and find the **TextBox1.C1SliderExtender** in the drop-down list at the top of the Properties window.
5. Locate the **C1SliderExtender.Value** property in the Properties window and set it to **2**.
6. Locate the **C1SliderExtender.Values** property in the Properties window and set it to **3, 95**.
7. Press **F5** to run your program. Note that although there are two thumbs on the slider, there is no stylable range element between them.

## Setting C1SliderExtender's Range

Wijmo Control Toolkit Extender Controls > C1Slider Extender > Setting C1SliderExtender's Range

The C1SliderExtender supports capturing a range of values with two drag handles.

1. Create a new ASP.NET Web application.
2. In your Web application, add a standard TextBox control to the main content of your page.
3. In Source View, drag a C1SliderExtender control to the page.
4. Select **View | Properties** from the Visual Studio menu and find the **TextBox1.C1SliderExtender** in the drop-down list at the top of the Properties window.
5. Locate the **C1SliderExtender.Range** property in the list of C1SliderExtender properties and set it to True.
6. Locate the **C1SliderExtender.Value** property and set it to 2. This property sets the number of thumbs on the slider.
7. Locate the **C1SliderExtender.Values** property and set it to 4, 205. This property sets the values for the range.
8. Press **F5** to run your application. The C1SliderExtender control should resemble the following image:

## Setting C1SliderExtender's DragFill Behavior

Wijmo Control Toolkit Extender Controls > C1Slider Extender > Setting C1SliderExtender's DragFill Behavior

C1SliderExtender allows you to create a stylable range element that can be dragged between the two handles.

1. Create a new ASP.NET Web application.

2. In your Web application, add a standard Panel control to the main content of your page and set the ID as hSlider.
3. Set the CssClass of your Panel control as hSlider. This will allow you to add CSS styling to the C1SliderExtender.
4. In Source View, drag a C1SliderExtender control to the page.
5. Select **View | Properties** from the Visual Studio menu and find the C1SliderExtender in the drop-down list at the top of the Properties window.
6. Locate the **C1SliderExtender.DragFill** property and set it to true.
7. Locate the **C1SliderExtender.Range** property and set it to true.
8. Set the **C1SliderExtender.Value** property to **2** and the **C1SliderExtender.Values** property to **3, 105**.
9. Add the following CSS styling to the first set of <asp:Content> tags to set the width and height of the control. This will make it easier to see the DragFill behavior.

```
<style type="text/css">

 .hSlider
 {
 width: 300px;
 height: 100px;
 }

 .header2
 {
 margin-bottom: 10px;
 }

</style>
```

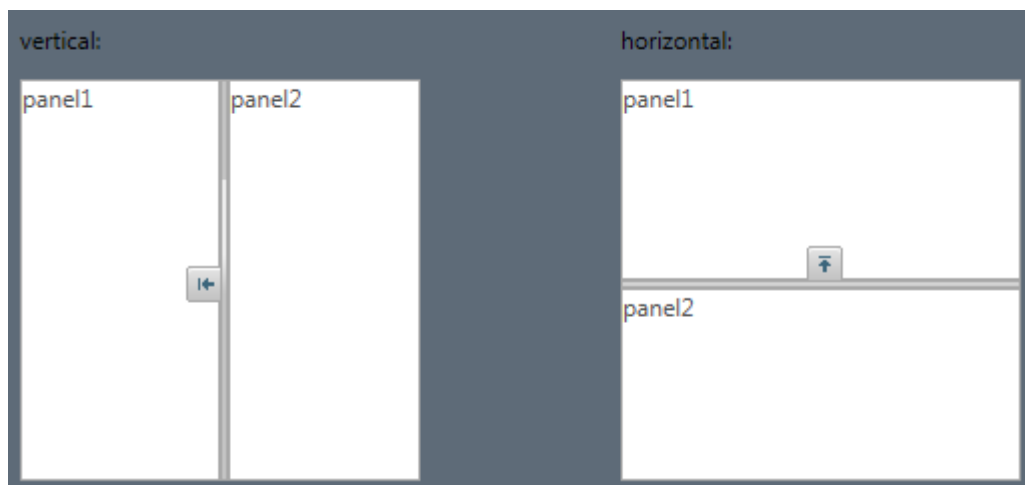

10. Press **F5** to run your application. The C1SliderExtender control should resemble the following image:

## C1SplitterExtender

Create a professional and polished website with the help of the C1SplitterExtender control. The C1SplitterExtender control is a container featuring a movable and collapsible bar that divides a

container's display area into two resizable panels. Splitters are able to be nested indefinitely, providing you infinite possibilities in Web interface design.

### C1SplitterExtender Markup

The following markup creates C1SplitterExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1SplitterExtender ID="Panel1_C1SplitterExtender" runat="server"
 TargetControlID="Panel1">
 <resizesettings>
 <animationoptions easing="">
 </animationoptions>
 </resizesettings>
</cc1:C1SplitterExtender>
```

## C1SplitterExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1SplitterExtender > C1SplitterExtender Tutorial

This tutorial demonstrates how to attach multiple C1SplitterExtender controls to **Panel** controls and create a nested splitter.

### Step 1 of 3: Adding C1SplitterExtender Controls to the Project

Wijmo Control Toolkit Extender Controls > C1SplitterExtender > C1SplitterExtender Tutorial > Step 1 of 3:

### Adding C1SplitterExtender Controls to the Project

In this topic you will associate two C1SplitterExtender controls with two **Panel** controls.

1. In your Web application, add a standard Panel control to the main content of your page and within the <div> tags of the first panel, add a second panel. Set the Width and Height for both panels. The markup should look similar to this:

```
<asp:Panel ID="Panel1" runat="server" Width="300" Height="300px">

 <div>Panel1</div>

 <div>

 <asp:Panel ID="Panel2" runat="server" Width="200"
Height="200px">

 <div>Panel2</div>

 </asp:Panel>

 </div>

</asp:Panel>
```

Drag two C1SplitterExtender controls to the page.

2. Select the C1SplitterExtender markup for the first control, and in the Visual Studio Properties window, set the **TargetControlID** property to **Panel1**. The markup will look like this:

```
<cc1:C1SplitterExtender ID="Panel1_C1SplitterExtender" runat="server"

 TargetControlID="Panel1">

</cc1:C1SplitterExtender>
```

4. Select the C1SplitterExtender markup for the second control and set the TargetControlID property to Panel2. The markup will look like this:

```
<cc1:C1SplitterExtender ID="Panel2_C1SplitterExtender" runat="server"

 TargetControlID="Panel2">

</cc1:C1SplitterExtender>
```

Now you can begin setting properties for the **C1SplitterExtenders**.

## Step 2 of 3: Customizing the Splitters

Wijmo Control Toolkit Extender Controls > C1SplitterExtender > C1SplitterExtender Tutorial > Step 2 of 3: Customizing the Splitters

In this topic you will set some of the properties for the C1SplitterExtender controls.

1. In the Visual Studio Properties window, click the drop-down list at the top of the Properties window and select **Panel1\_C1SplitterExtender**.
2. Set the **C1SplitterExtender.Orientation** property to **Horizontal**.
3. In the Visual Studio Properties window, click the drop-down list at the top of the Properties window and select Panel2\_SplitterExtender.
4. Set the **C1SplitterExtender.FullSplit** property to **True**. The second splitter will fill the width inside Panel1. The markup should now look like this:

```
<cc1:C1SplitterExtender ID="Panel1_C1SplitterExtender" runat="server"
```

```
 TargetControlID="Panel1" Orientation="Horizontal">
```

```
</cc1:SplitterExtender>
```

```
<cc1:C1SplitterExtender ID="Panel2_C1SplitterExtender" runat="server"
```

```
 TargetControlID="Panel2" FullSplit="True">
```

```
</cc1:C1SplitterExtender>
```

Now run the project to see the formatted splitters.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1SplitterExtender > C1SplitterExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the following:

- Panel2 is nested within Panel1.
- Panel1 has a horizontal split and Panel 2 has a vertical split.
- Panel2 is the same width as Panel1 now that it has been made a C1SplitterExtender.FullSplit.

## Creating a Full-Sized Splitter

Wijmo Control Toolkit Extender Controls > C1SplitterExtender > Creating a Full-Sized Splitter

The **C1SplitterExtender** control allows you to create a full-sized splitter that fills the page. Simply set the **FullSplit** property to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page and add the following markup to the Panel.

```
<asp:Panel runat="server" ID="Panel1">

 <div>

 panel1

 </div>

 <div>

 panel2

 </div>

</asp:Panel>
```

3. Click the **Panel** smart tag and select **Add Extender** from the Tasks menu.
4. In the **Extender Wizard**, select **C1SplitterExtender** and click **OK**. A **C1SplitterExtender** control is added to the page and the **TargetControlID** is set to Panel1.
5. Select **View | Properties Window** in the Visual Studio menu.
6. Click the drop-down list at the top of the Properties window and select **Panel1\_C1SplitterExtender**.
7. Set the **C1SplitterExtender.FullSplit** property to **True**.
8. Press **F5** to run the application. The splitter will look similar to this:

## Creating a Horizontal or Vertical Splitter

Wijmo Control Toolkit Extender Controls > C1SplitterExtender > Creating a Horizontal or Vertical Splitter

The **C1SplitterExtender** control allows you to change the orientation of a splitter. Simply set the **Orientation** property to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard Panel control to the main content of your page.
3. Add a second Panel control within the first panel, Panel1.
4. Add markup within each panel so the final markup looks like this:

```
<asp:Panel runat="server" ID="Panel1">

 <div>

 panel1

 </div>

 <div>

 <asp:Panel runat="server" ID="Panel2">

 <div>

 panel2</div>

 <div>

 panel3</div>

 </asp:Panel>

 </div>
```

```
</asp:Panel>
```

5. Click the **Panel1** smart tag and select **Add Extender** from the Tasks menu.
6. In the **Extender Wizard**, select **C1SplitterExtender** and click **OK**. A C1SplitterExtender control is added to the page and the **TargetControlID** is set to Panel1.
7. Click the **Panel2** smart tag and select **Add Extender** from the **Tasks** menu.
8. In the **Extender Wizard**, select **C1SplitterExtender** and click **OK**. A **C1SplitterExtender** control is added to the page and the TargetControlID is set to Panel2.
9. Select **View | Properties Window** in the Visual Studio menu.
10. Click the drop-down list at the top of the Properties window and select **Panel1\_C1SplitterExtender**.
11. Set the C1SplitterExtender.Orientation property to **Vertical**.
12. Click the drop-down list at the top of the Properties window and select **Panel2\_C1SplitterExtender**.
13. Set the C1SplitterExtender.Orientation property to Horizontal and set the C1SplitterExtender.FullSplit property to true.
14. Press **F5** to run the application. The splitter will look similar to this:

## Setting the Location of the Splitter

Wijmo Control Toolkit Extender Controls > C1SplitterExtender > Setting the Location of the Splitter

The **C1SplitterExtender** control allows you to specify the location of the splitter, in pixels, from the left or top edge of the SplitContainer. Simply set the **SplitterDistance** property to take advantage of this feature.

1. Create an **ASP.NET Web** application.
2. Add a standard Panel control to the main content of your page.
3. Add a second Panel control within the first panel, Panel1.
4. Add markup within each panel so the final markup looks like this:

```
<asp:Panel runat="server" ID="Panel1">
```

```
<h3>SplitterDistance = 200</h3>
```

```
<div id="splitter1">
```

```
<div>panel1</div>
```

```
<div>panel2</div>
```

```
</div>
```

```

</asp:Panel>

<div class="layout" style="width: 100px;">

 </div>

<asp:Panel ID="Panel2" runat="server">

 <h3>SplitterDistance = 100</h3>

 <div id="splitter2">

 <div>

 panel1

 </div>

 <div>

 panel2</div>

 </div>

</asp:Panel>

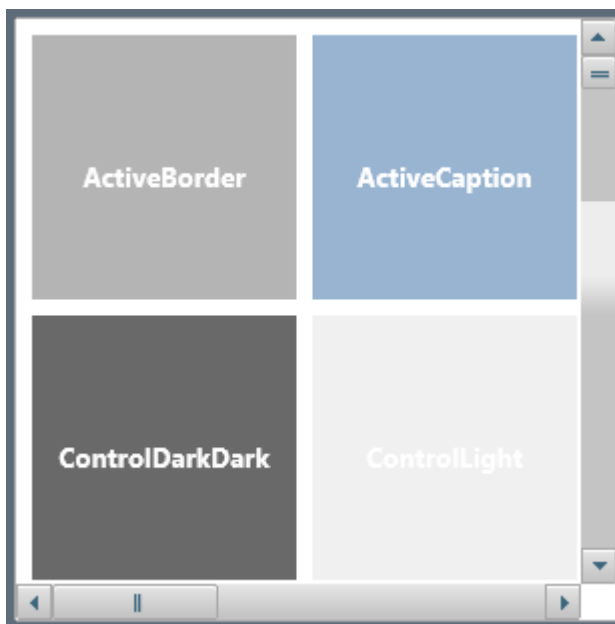

```

5. Click the **Panel1** smart tag and select **Add Extender** from the Tasks menu.
6. In the **Extender Wizard**, select **C1SplitterExtender** and click **OK**. A **C1SplitterExtender** control is added to the page and the **TargetControlID** is set to Panel1.
7. Click the **Panel2** smart tag and select **Add Extender** from the **Tasks** menu.
8. In the **Extender Wizard**, select **C1SplitterExtender** and click **OK**. A **C1SplitterExtender** control is added to the page and the **TargetControlID** is set to Panel2.
9. Select **View | Properties Window** in the Visual Studio menu.
10. Click the drop-down list at the top of the Properties window and select **Panel1\_C1SplitterExtender**.
11. Set the **C1SplitterExtender.SplitterDistance** property to **200**.
12. Click the drop-down list at the top of the Properties window and select **Panel2\_C1SplitterExtender**.
13. Set the **C1SplitterExtender.Orientation** property to Horizontal.
14. Press **F5** to run the application. The splitters will look similar to this:

## C1SuperPanel Extender

The C1SuperPanelExtender control is an alternative to the HTML scroll bar enabling you to easily scroll overflowed elements. Add custom scrolling, resizing, rounded corners, and drop shadows to any panel on your page.

### C1SuperPanelExtender Markup

The following markup creates C1SuperPanelExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1SuperPanelExtender ID="C1SuperPanelExtender1" runat="server"
TargetControlID="Panel1">

</cc1:C1SuperPanelExtender>
```

# C1SuperPanelExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > C1SuperPanelExtender Tutorial

This tutorial demonstrates how to attach the C1SuperPanelExtender control to a **Panel** control and customize panel scrolling by setting the extender properties.

## Step 1 of 4: Creating the Panel

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > C1SuperPanelExtender Tutorial > Step 1 of 4: Creating the Panel

In this topic you will add a **Panel** control with some formatted content.

1. In the Visual Studio Toolbox, double-click the Panel control to add a panel to the main content of your page.
2. Add some content to the panel. For example:

```
<asp:Panel ID="Panel1" runat="server" Height="300" Width="300">

 <div class="elements">

 <li style="background: AliceBlue;"> AliceBlue

 <li style="background: AntiqueWhite;"> AntiqueWhite

 <li style="background: Aqua;"> Aqua

 <li style="background: Aquamarine;"> Aquamarine

 <li style="background: Azure;"> Azure

 <li style="background: Beige;"> Beige

 <li style="background: Bisque;"> Bisque

 <li style="background: Black;"> Black

 <li style="background:
BlanchedAlmond;"> BlanchedAlmond

 <li style="background: Blue;"> Blue

 <li style="background: BlueViolet;"> BlueViolet

 <li style="background: Brown;"> Brown
```

```

<li style="background: BurlyWood;"> BurlyWood

<li style="background: CadetBlue;"> CadetBlue

<li style="background: Chartreuse;"> Chartreuse

<li style="background: Chocolate;"> Chocolate

<li style="background: Coral;"> Coral

<li style="background:
CornflowerBlue;"> CornflowerBlue

<li style="background: Cornsilk;"> Cornsilk

<li style="background: Crimson;"> Crimson

<li style="background: Cyan;"> Cyan

<li style="background: DarkBlue;"> DarkBlue

<li style="background: DarkCyan;"> DarkCyan

<li style="background:
DarkGoldenrod;"> DarkGoldenrod

<li style="background: DarkGray;"> DarkGray

<li style="background: DarkGreen;"> DarkGreen

<li style="background: DarkKhaki;"> DarkKhaki

<li style="background: DarkMagenta;"> DarkMagenta

<li style="background:
DarkOliveGreen;"> DarkOliveGreen

<li style="background: DarkOrange;"> DarkOrange

</div>

</asp:Panel>

```

3. Format the content with a CSS so it appears a little cleaner by adding the following markup within the <asp:Content> tags for the HeaderComponent. Add the following:

```
<asp:Content ID="HeaderContent" runat="server" ContentPlaceHolderID="HeadContent">
```

```
<style type="text/css">

.elements ul

{

 padding: 8px 0 0 8px;

 margin: 0px;

 width: 840px;

 float: left;

}

.elements ul li

{

 background: #fff;

 color: #fff;

 font-weight: 900;

 height: 70px;

 margin: 0 8px 8px 0;

 padding: 0;

 padding-top: 62px;

 position: relative;

 text-align: center;

 width: 132px;

}

.elements li

{
```

```
float: left;

list-style: none;

}

</style>

</asp:Content>
```

4. Next, add a **C1SuperPanelExtender** control and associate it with the panel.

## Step 2 of 4: Adding a C1SuperPanelExtender to the Page

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > C1SuperPanelExtender Tutorial > Step 2 of 4: Adding a C1SuperPanelExtender to the Page

In this step, you will add a **C1SuperPanelExtender** control to associate with the panel to create a scrollable panel.

1. Drag a **C1SuperPanelExtender** to the form.
2. Set the **TargetControlID** property to **Panel1**.

```
<cc1:C1SuperPanelExtender ID="C1SuperPanelExtender1" runat="server"
TargetControlID="Panel1">
```

```
</cc1:C1SuperPanelExtender>
```

Now set some properties to customize scrolling.

## Step 3 of 4: Customizing the C1SuperPanelExtender

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > C1SuperPanelExtender Tutorial > Step 3 of 4: Customizing the C1SuperPanelExtender

In this topic you will set some of the properties for the C1SuperPanelExtender to change the way the panel is scrolled.

1. Select View | Properties Window in the Visual Studio menu.
2. Click the drop-down list at the top of the window and select C1SuperPanelExtender1.
3. Expand the C1SuperPanelExtender.HScroller property node and set ScrollMode to Edge.
4. Expand the C1SuperPanelExtender.VScroller property node and set the ScrollMode property to Buttons.

```
<cc1:C1SuperPanelExtender ID="C1SuperPanelExtender1" runat="server"
TargetControlID="Panel1">

 <AnimationOptions Easing=""></AnimationOptions>

 <HScroller ScrollMode="Edge">

 </HScroller>

 <VScroller ScrollMode="Buttons">

 </VScroller>

 <ResizableOptions Handles="All" Helper="ui-widget-content wijmo-wijsuperpanel-
helper"></ResizableOptions>

</cc1:C1SuperPanelExtender>
```

Next, run the project to scroll the panel.

## Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > C1SuperPanelExtender Tutorial >  
Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- Hover over the right or left side of the panel to scroll horizontally.
- Notice the scroll buttons at the top and bottom of the panel. Use the buttons to scroll vertically.

## Applying Animation to the SuperPanel

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > Applying Animation to the SuperPanel

To set the animation effect and animation duration for the combobox, complete the following:

1. In your Web application, add a reference to the **C1.Web.Wijmo.Extenders.3.dll** and then add a standard Panel control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1SuperPanel** and click **OK**. A **SuperPanelExtender** control is added to the page and the TargetControlID is set to Panel1.
4. Select **View | Properties Window** in the Visual Studio menu.
5. Click the drop-down list at the top of the Properties window and select **Panel1\_C1SuperPanelExtender**.
6. Expand the **AnimationOptions** node and set the **Easing** property to EaseInBounce.
7. Increase the **Duration** value to 1500.

## Hiding Vertical Scrolling

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > Hiding Vertical Scrolling

You can hide vertical scrolling by setting the **Vscroller.ScrollBarVisibility** property to **Hidden**.

This topic shows how to modify the **Vscroller.ScrollBarVisibility** property in Design view and in Source view.

### Hiding Vertical Scrolling in Design View:

To hide vertical scrolling in design view, follow these steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1\_C1SuperPanel**.
3. Expand the **Vscroller** node and set the **ScrollBarVisibility** property to **Hidden**.

### Hiding Vertical Scrolling in Source View:

To hide vertical scrolling on the superpanel, click the source tab and add the following code in your source file:

```
<cc1:C1SuperPanelExtender ID="Panel1_C1SuperPanelExtender" runat="server"
```

```
 KeyboardSupport="False" TargetControlID="Panel1">
```

```
 <VScroller ScrollBarVisibility="Hidden">
```

```
 </VScroller>
```

```
 <resizableoptions handles="All"
```

```
 helper="ui-widget-content wijmo-wijsuperpanel-helper">

 </resizableoptions>

 </cc1:C1SuperPanelExtender>
```

## Resizing the SuperPanel

Wijmo Control Toolkit Extender Controls > C1SuperPanel Extender > Resizing the SuperPanel

You can resize the SuperPanel at run time when you set the **AllowResize** property to True.

To set the **AllowResize** property in design view, follow these steps:

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the Properties window and select **Panel1\_C1SuperPanel**.
3. Set the **AllowResize** property to **True**.

### Setting the AllowResize Property in Source View:

To set the **AllowResize** property in source view, click the source tab and add the following code in your source file:

```
<asp:Panel ID="Panel1" runat="server" Height="15px" Width="180px"
DropdownHeight="500"

 DropdownWidth="400">

 </asp:Panel>

 <cc1:C1SuperPanelExtender ID="Panel1_C1SuperPanelExtender" runat="server"

 AllowResize="True" KeyboardSupport="False" TargetControlID="Panel1">

 <VScroller ScrollBarVisibility="Hidden">

 </VScroller>

 <resizableoptions handles="All"

 helper="ui-widget-content wijmo-wijsuperpanel-helper">

 </resizableoptions>

 </cc1:C1SuperPanelExtender>
```

# C1TabsExtender

The C1TabsExtender control is generally used to break content into multiple sections that can be swapped to save screen real estate.

## C1TabsExtender Markup

The following markup creates C1TabsExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1TabsExtender ID="Panel1_C1TabsExtender" runat="server"
 TargetControlID="Panel1">

</cc1:C1TabsExtender>
```

# C1TabsExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1TabsExtender > C1TabsExtender Tutorial

This tutorial demonstrates how to attach the C1TabsExtender control to a **Panel** control and customize panel scrolling by setting the extender properties.

## Step 1 of 4: Setting up the Panel

Wijmo Control Toolkit Extender Controls > C1TabsExtender > C1TabsExtender Tutorial > Step 1 of 4: Setting up the Panel

In this topic you will add a **Panel** control with some content that will become tabbed.

1. In the Visual Studio Toolbox, double-click the Panel control to add a panel to the main content of your page.
2. Add some content to the panel. For example:

```
<asp:Panel ID="Panel1" runat="server">

 Nunc tincidunt
```

```
Proin dolor
```

```
Aenean lacinia
```

```

```

```
<div id="tabs-1">
```

```
<p>
```

Proin elit arcu, rutrum commodo, vehicula tempus, commodo a, risus. Curabitur nec

arcu. Donec sollicitudin mi sit amet mauris. Nam elementum quam ullamcorper ante.

Etiam aliquet massa et lorem. Mauris dapibus lacus auctor risus. Aenean tempor ullamcorper

leo. Vivamus sed magna quis ligula eleifend adipiscing. Duis orci. Aliquam sodales

tortor vitae ipsum. Aliquam nulla. Duis aliquam molestie erat. Ut et mauris vel

pede varius sollicitudin. Sed ut dolor nec orci tincidunt interdum. Phasellus ipsum.

Nunc tristique tempus lectus.</p>

```
</div>
```

```
<div id="tabs-2">
```

```
<p>
```

Morbi tincidunt, dui sit amet facilisis feugiat, odio metus gravida ante, ut pharetra

massa metus id nunc. Duis scelerisque molestie turpis. Sed fringilla, massa eget

luctus malesuada, metus eros molestie lectus, ut tempus eros massa ut dolor. Aenean

aliquet fringilla sem. Suspendisse sed ligula in ligula suscipit aliquam. Praesent

in eros vestibulum mi adipiscing adipiscing. Morbi facilisis. Curabitur ornare consequat

nunc. Aenean vel metus. Ut posuere viverra nulla.  
Aliquam erat volutpat. Pellentesque

convallis. Maecenas feugiat, tellus pellentesque  
pretium posuere, felis lorem euismod

felis, eu ornare leo nisi vel felis. Mauris consectetur  
tortor et purus.</p>

</div>

<div id="tabs-3">

<p>

Mauris eleifend est et turpis. Duis id erat. Suspendisse

</div>

</asp:Panel>

Next, add a **C1TabsExtender** control and associate it with the panel.

## Step 2 of 4: Adding a Tab Extender to the Page

Wijmo Control Toolkit Extender Controls > C1TabsExtender > C1TabsExtender Tutorial > Step 2 of 4:  
Adding a Tab Extender to the Page

In this step, you will add a C1TabsExtender control to associate with the panel and create tabs.

1. Drag a **C1TabsExtender** control to the form from the Visual Studio Toolbox.
2. Set the **TargetControlID** property to **Panel1**.

```
<cc1:C1TabsExtender ID="Panel1_C1TabsExtender" runat="server"
```

```
 TargetControlID="Panel1">
```

```
</cc1:C1TabsExtender>
```

Now set some properties to customize the tabs.

## Step 3 of 4: Customizing the Tabs

Wijmo Control Toolkit Extender Controls > C1TabsExtender > C1TabsExtender Tutorial > Step 3 of 4:  
Customizing the Tabs

In this topic you will set some of the properties for the C1TabsExtender control to customize the tabbing.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the window and select **Panel1\_TabsExtender**.
3. Set the C1TabsExtender.Alignment property to **Left**.
4. Set the C1TabsExtender.Event property to mouseover.
5. Set the C1TabsExtender.Collapsible event to True. The markup will look like this:

```
<cc1:C1TabsExtender ID="Panel1_C1TabsExtender" runat="server"
```

```
 TargetControlID="Panel1" Alignment="Left" Collapsible="True"
```

```
 Event="mouseover" >
```

```
</cc1:C1TabsExtender>
```

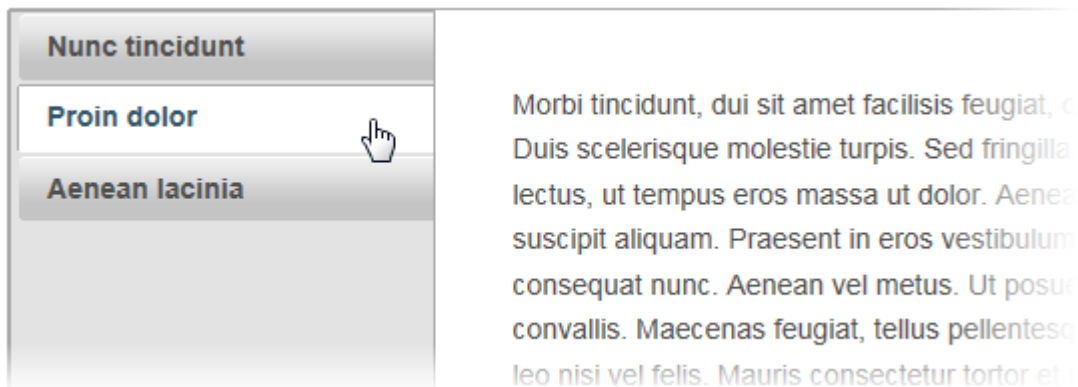

Now run the project to see the tabbed content.

## Step 4 of 4: Running the Project

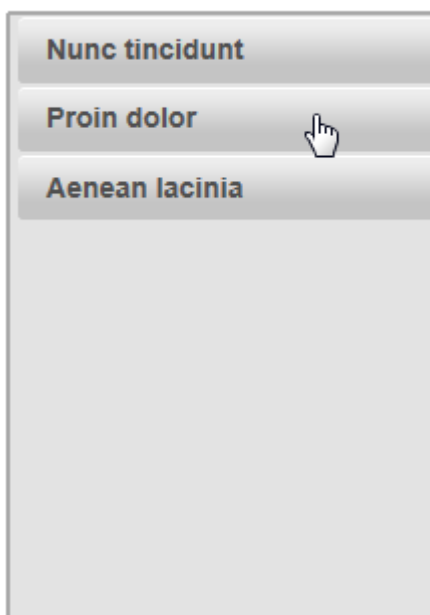

Wijmo Control Toolkit Extender Controls > C1TabsExtender > C1TabsExtender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- The tabs appear on the left of the panel.
- Hover over the tabs and the content appears.

- Hover over a tab once, move the focus off of the tab, and hover over the same tab again; the tab collapses.

# Opening Tabs on Hover

Wijmo Control Toolkit Extender Controls > C1TabsExtender > Opening Tabs on Hover

The **wijtabs** widget allows users to view the content for a tab by hovering the tab header. Simply set the **Event** property to take advantage of this feature.

1. Create an **ASP.NET Web** application.
2. Add a standard Panel control to the main content of your page.
3. In the panel, add some content for the tabs and tab headers using the following markup:

```
<asp:Panel ID="Panel1" runat="server">
```

```

```

```
Nunc tincidunt
```

```
Proin dolor
```

```
Aenean lacinia
```

```

```

```
<div id="tabs-1">
```

```
<p>
```

Proin elit arcu, rutrum commodo, vehicula tempus, commodo  
a, risus. Curabitur nec

arcu. Donec sollicitudin mi sit amet mauris. Nam elementum  
quam ullamcorper ante.

Etiam aliquet massa et lorem. Mauris dapibus lacus auctor  
risus. Aenean tempor ullamcorper

leo. Vivamus sed magna quis ligula eleifend adipiscing. Duis  
orci. Aliquam sodales

tortor vitae ipsum. Aliquam nulla. Duis aliquam molestie erat.  
Ut et mauris vel

pede varius sollicitudin. Sed ut dolor nec orci tincidunt  
interdum. Phasellus ipsum.

Nunc tristique tempus lectus.</p>

```
</div>
```

<div id="tabs-2">

<p>

gravida ante, ut pharetra Morbi tincidunt, dui sit amet facilisis feugiat, odio metus

fringilla, massa eget massa metus id nunc. Duis scelerisque molestie turpis. Sed

massa ut dolor. Aenean luctus malesuada, metus eros molestie lectus, ut tempus eros

```

 <p>
 Duis cursus. Maecenas ligula eros, blandit nec, pharetra at,
semper at, magna. Nullam
 ac lacus. Nulla facilisi. Praesent viverra justo vitae neque.
Praesent blandit adipiscing
 velit. Suspendisse potenti. Donec mattis, pede vel pharetra
blandit, magna ligula
 faucibus eros, id euismod lacus dolor eget odio. Nam
scelerisque. Donec non libero
 sed nulla mattis commodo. Ut sagittis. Donec nisi lectus,
feugiat porttitor, tempor
 ac, tempor vitae, pede. Aenean vehicula velit eu tellus
interdum rutrum. Maecenas
 commodo. Pellentesque nec elit. Fusce in lacus. Vivamus a
libero vitae lectus hendrerit
 hendrerit.</p>
 </div>
</asp:Panel>

```

4. Click the **Panel** smart tag and select **Add Extender** from the **Tasks** menu.
5. In the Extender Wizard, select **C1TabsExtender** and click **OK**. A **C1TabsExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.
6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1\_C1TabsExtender**.
8. Set the C1TabsExtender.Event property to mouseover.
9. The markup for the C1TabsExtender control should now look similar to the following:

```

<cc1:C1TabsExtender ID="Panel1_C1TabsExtender" runat="server"
 TargetControlID="Panel1" Event="mouseover">

</cc1:C1TabsExtender>

```

10. Press **F5** to run the application. Move the mouse over the tab headers and notice the tab's content appears.

## Setting Tab Location

Wijmo Control Toolkit Extender Controls > C1TabsExtender > Setting Tab Location

The **C1TabsExtender** control allows you to align the tabstrip to the right, left, top, or bottom of the control. Simply set the **Alignment** property to take advantage of this feature.

1. Create an ASP.NET Web application.
2. Add a standard **Panel** control to the main content of your page.
3. In the panel, add some content for the tabs and tab headers using the following markup:

```
<asp:Panel ID="Panel1" runat="server">
```

```

```

```
Nunc tincidunt
```

```
Proin dolor
```

```
Aenean lacinia
```

```

```

```
<div id="tabs-1">
```

```
<p>
```

```
Proin elit arcu, rutrum commodo, vehicula tempus, commodo
a, risus. Curabitur nec
```

```
arcu. Donec sollicitudin mi sit amet mauris. Nam elementum
quam ullamcorper ante.
```

```
Etiam aliquet massa et lorem. Mauris dapibus lacus auctor
risus. Aenean tempor ullamcorper
```

```
leo. Vivamus sed magna quis ligula eleifend adipiscing. Duis
orci. Aliquam sodales
```

```
tortor vitae ipsum. Aliquam nulla. Duis aliquam molestie erat.
Ut et mauris vel
```

```
pede varius sollicitudin. Sed ut dolor nec orci tincidunt
interdum. Phasellus ipsum.
```

```
Nunc tristique tempus lectus.</p>
```

```
</div>
```

```
<div id="tabs-2">
```

```
<p>
```

gravida ante, ut pharetra Morbi tincidunt, dui sit amet facilisis feugiat, odio metus

fringilla, massa eget massa metus id nunc. Duis scelerisque molestie turpis. Sed

 interdum rutrum. Maecenas
 commodo. Pellentesque nec elit. Fusce in lacus. Vivamus a
 libero vitae lectus hendrerit
 hendrerit.</p>
 </div>
</asp:Panel>

```

4. Panel smart tag and select **Add Extender** from the **Tasks** menu.
5. **Extender Wizard**, select **C1TabsExtender** and click **OK**. A **C1TabsExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.
6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1\_C1TabsExtender**.
8. Set the **C1TabsExtender.Alignment** property to **Right**.
9. The markup for the **C1TabsExtender** control should now look similar to the following:

```

<cc1:C1TabsExtender ID="Panel1_C1TabsExtender" runat="server"
 TargetControlID="Panel1" Alignment="Right">

</cc1:C1TabsExtender>

```

10. Press **F5** to run the application. The **C1TabsExtender** will look similar to the following, with the tab headers on the right:

## Tab Animation

Wijmo Control Toolkit Extender Controls > C1TabsExtender > Tab Animation

The **C1TabsExtender** control allows you to add animation for transitioning between tabs. Use the **ShowOption** and **HideOption** properties to take advantage of this feature.

1. Create an **ASP.NET Web** application.
2. Add a standard **Panel** control to the main content of your page.

3. In the panel, add some content for the tabs and tab headers using the following markup:

```
<asp:Panel ID="Panel1" runat="server">
```

```

```

```
Nunc tincidunt
```

```
Proin dolor
```

```
Aenean lacinia
```

```

```

```
<div id="tabs-1">
```

```
<p>
```

Proin elit arcu, rutrum commodo, vehicula tempus, commodo  
a, risus. Curabitur nec

arcu. Donec sollicitudin mi sit amet mauris. Nam elementum  
quam ullamcorper ante.

Etiam aliquet massa et lorem. Mauris dapibus lacus auctor  
risus. Aenean tempor ullamcorper

leo. Vivamus sed magna quis ligula eleifend adipiscing. Duis  
orci. Aliquam sodales

libero vitae lectus hendrerit

 hendrerit.</p>

 </div>

</asp:Panel>

```

4. Click the Panel smart tag and select **Add Extender** from the Tasks menu.
5. In the **Extender Wizard**, select **C1TabsExtender** and click **OK**. A **C1TabsExtender** control is added to the page and the TargetControlID is set to Panel1.
6. Select **View | Properties Window** in the Visual Studio menu.
7. Click the drop-down list at the top of the Properties window and select **Panel1\_C1TabsExtender**.
8. Set the C1TabsExtender.ShowOption properties:

ShowOption-Blind	True
ShowOption-Duration	1500
ShowOption-Fade	True

9. Set the C1TabsExtender.HideOption properties:

HideOption-Blind	False
HideOption-Duration	200
HideOption-Fade	True

10. The markup for the C1TabsExtender control should now look similar to the following:

```

<wijmo:C1TabsExtender ID="Panel1_C1TabsExtender" runat="server"

 TargetControlID="Panel1" ShowOption-Duration="1500" HideOption-
 Blind="False" HideOption-Duration="200">

</cc1:C1TabsExtender>

```

Press **F5** to run the application. When you click a tab, the content from the previously selected tab fades quickly, and the content for the selected tab drops down and slowly fades in.

## C1ToolTipExtender

Wijmo Control Toolkit Extender Controls > C1ToolTipExtender

The C1ToolTipExtender control allows you to show a popup tooltip or an overlay that provides information about a target element in a callout or small box. Embed any HTML, images, and text to create a fully customized tooltip.

## C1ToolTipExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1ToolTipExtender > C1ToolTipExtender Tutorial

This tutorial demonstrates how to attach the C1ToolTipExtender control to a **Label** control and customize tooltip by setting the extender properties.

### Step 1 of 3: Adding a C1ToolTipExtender

Wijmo Control Toolkit Extender Controls > C1ToolTipExtender > C1ToolTipExtender Tutorial > Step 1 of 3: Adding a C1ToolTipExtender

In this topic you will add a **Label** control and associate it with a C1ToolTipExtender control.

1. In the Visual Studio Toolbox, double-click the Label control to add a label to the main content of your page.
2. Double-click the **C1ToolTipExtender** control to add it to the page.
3. Set the **TargetControlID** property to **Label1**. The markup will look like this:

```
<cc1:C1ToolTipExtender ID="TooltipExtender1" runat="server">
```

```
</cc1:C1ToolTipExtender>
```

Now set some properties to customize the tooltip.

### Step 2 of 3: Customizing the Tooltip

Wijmo Control Toolkit Extender Controls > C1ToolTipExtender > C1ToolTipExtender Tutorial > Step 2 of 3: Customizing the Tooltip

In this topic you will set some of the properties for the C1ToolTipExtender control.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the window and select **C1ToolTipExtender1**.
3. Set the C1ToolTipExtender.CloseBehavior property to **Sticky**.
4. Enter "Here is a tooltip!" next to the C1ToolTipExtender.Content property.

5. Set the C1TooltipExtender.Triggers event to RightClick. The markup looks like this:

```
<cc1:C1TooltipExtender ID="C1TooltipExtender1" runat="server"
CloseBehavior="Sticky"

 Content="Here is the tooltip!" Triggers="RightClick" TargetControlID="Label1">

</cc1:C1TooltipExtender>
```

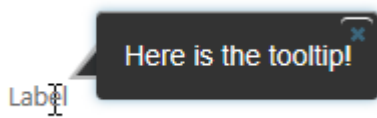

Now run the project to view the tooltip.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1ToolTipExtender > C1ToolTipExtender Tutorial > Step 3 of 3: Running the Project

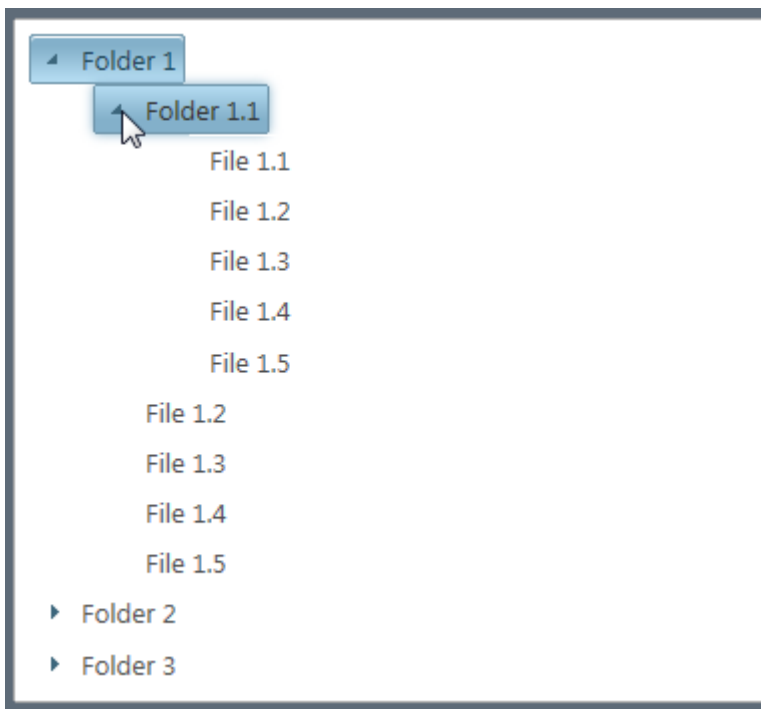

Press **F5** to run the project and view the following:

- Right-click the label and the tooltip appears.
- Click the X button to close the tooltip.

## C1TreeExtender

Present items in a hierarchical tree structure with the C1TreeExtender control. The C1TreeExtender control supports expand/collapse animations, stylish themes, and drag-and-drop functionality.

### C1TreeExtender Markup

The following markup creates C1TreeExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1TreeExtender ID="Panel1_C1TreeExtender" runat="server"
 TargetControlID="Panel1">
</cc1:C1TreeExtender>
```

## C1TreeExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1TreeExtender > C1TreeExtender Tutorial

This tutorial demonstrates how to attach the C1TreeExtender control to a **Panel** control and customize the tree by setting the extender properties.

### Step 1 of 4: Setting up the Panel

Wijmo Control Toolkit Extender Controls > C1TreeExtender > C1TreeExtender Tutorial > Step 1 of 4:  
Setting up the Panel

In this topic you will add a **Panel** control with some content that will become a hierarchical tree structure.

1. In the Visual Studio Toolbox, double-click the **Panel** control to add a panel to the main content of your page.

2. Add some content to the panel. For example:

```
<asp:Panel ID="Panel1" runat="server">

 <li class="folder"><a>Folder 1

 <li class="folder"><a>Folder 1.1

 <li class="file"><a>File 1.1

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

 <li class="file"><a>File 1.5

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

 <li class="file"><a>File 1.5

 <li class="folder"><a>Folder 2

 <li class="file"><a>File 2.1

 <li class="file"><a>File 2.2

 <li class="file"><a>File 2.3

</asp:Panel>
```

```

 <li class="file"> <a> File 2.4

 <li class="file"> <a> File 2.5

<li class="folder"> <a> Folder 3

 <li class="file"> <a> File 3.1

 <li class="file"> <a> File 3.2

 <li class="file"> <a> File 3.3

 <li class="file"> <a> File 3.4

 <li class="file"> <a> File 3.5

</asp:Panel>

```

Next, add a C1TreeExtender control and associate it with the panel.

## Step 2 of 4: Adding a C1TreeExtender to the Page

Wijmo Control Toolkit Extender Controls > C1TreeExtender > C1TreeExtender Tutorial > Step 2 of 4:  
Adding a C1TreeExtender to the Page

In this step, you will add a C1TreeExtender control to associate with the panel and create a hierarchical tree.

1. Drag a **C1TreeExtender** control to the form from the Visual Studio Toolbox.
2. Set the **TargetControlID** property to **Panel1**.

```

<cc1:C1TreeExtender ID="Panel1_C1TreeExtender" runat="server"

 TargetControlID="Panel1">

</cc1:C1TreeExtender>

```

Now set some properties to customize the tree.

## Step 3 of 4: Customizing the Tree

Wijmo Control Toolkit Extender Controls > C1TreeExtender > C1TreeExtender Tutorial > Step 3 of 4: Customizing the Tree

In this topic you will set some of the properties for the C1TreeExtender control.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the window and select **Panel1\_TreeExtender**.
3. Set the C1TreeExtender.AllowDrag and C1TreeExtender.AllowDrop properties to True.
4. Set the C1TreeExtender.AutoCollapse property to True. The markup will look like this:

```
<cc1:C1TreeExtender ID="Panel1_C1TreeExtender" runat="server"
 TargetControlID="Panel1" AllowDrag="True" AllowDrop="True"
 AutoCollapse="True">
</cc1:C1TreeExtender>
```

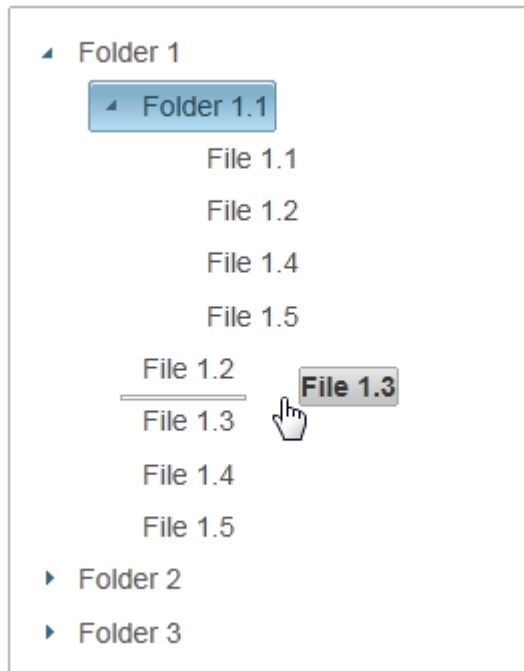

Now run the project to see the tree.

## Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1TreeExtender > C1TreeExtender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- Click the nodes to expand each folder.
- Drag a file or folder and drop it in another area of the tree.
- Click Folder 1 and then click Folder 2. Folder 1 automatically closes because you set the C1TreeExtender.AutoCollapse property to True.

## Setting the Auto Collapse Option

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Setting the Auto Collapse Option

You can set the C1TreeExtender control so that the open nodes will automatically collapse when another node is opened.

Complete these steps:

1. Create a new ASP.NET Web Application.
2. In the Visual Studio Toolbox, double-click on a standard Panel control to add it to the main content of your page.
3. Add the following markup within the `<asp:Panel>` tags to create the list that will become the tree.

```

```

```
<li class="folder"><a>Folder 1
```

```

```

```
<li class="folder"><a>Folder 1.1
```

```

```

```
<li class="file"><a>File 1.1
```

```
<li class="file"><a>File 1.2
```

```
<li class="file"><a>File 1.3
```

```

<li class="file"><a>File 1.4

<li class="file"><a>File 1.5

<li class="file"><a>File 1.2
<li class="file"><a>File 1.3
<li class="file"><a>File 1.4
<li class="file"><a>File 1.5

<li class="folder"><a>Folder 2

<li class="file"><a>File 2.1
<li class="file"><a>File 2.2
<li class="file"><a>File 2.3
<li class="file"><a>File 2.4
<li class="file"><a>File 2.5

<li class="folder"><a>Folder 3

<li class="file"><a>File 3.1
<li class="file"><a>File 3.2
<li class="file"><a>File 3.3
<li class="file"><a>File 3.4
<li class="file"><a>File 3.5

```

```

```

4. Use the Panel control's smart tag to open the **Extender Wizard** by clicking **Add Extender**.
5. Select the **C1TreeExtender** from the list and click **OK** to add it to the application.
6. Select **View | Properties** from the Visual Studio menu and use the drop-down list at the top of the Properties window to select **Panel1\_C1TreeExtender**.
7. Locate the C1TreeExtender.AutoCollapse property and set it to true.
8. Press F5 to run your application. Note that the C1TreeExtender.AutoCollapse property will not allow two nodes to be open at one time.

## Setting the Expand on Hover Option

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Setting the Expand on Hover Option

C1TreeExtender supports expanding or collapsing a node when the mouse hovers the node and then leaves the node.

1. Create a new ASP.NET Web Application.
2. In the Visual Studio Toolbox, double-click on a standard Panel control to add it to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create the list that will become the tree.

```

<li class="folder"><a>Folder 1

 <li class="folder"><a>Folder 1.1

 <li class="file"><a>File 1.1

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

 <li class="file"><a>File 1.5

```

```

<li class="file"><a>File 1.2

<li class="file"><a>File 1.3

<li class="file"><a>File 1.4

<li class="file"><a>File 1.5

<li class="folder"><a>Folder 2

<li class="file"><a>File 2.1

<li class="file"><a>File 2.2

<li class="file"><a>File 2.3

<li class="file"><a>File 2.4

<li class="file"><a>File 2.5

<li class="folder"><a>Folder 3

<li class="file"><a>File 3.1

<li class="file"><a>File 3.2

<li class="file"><a>File 3.3

<li class="file"><a>File 3.4

<li class="file"><a>File 3.5

```

4. Use the Panel control's smart tag to open the **Extender Wizard** by clicking **Add Extender**.
5. Select the **C1TreeExtender** from the list and click **OK** to add it to the application.
6. Select **View | Properties** from the Visual Studio menu and use the drop-down list at the top of the Properties window to select **Panel1\_C1TreeExtender**.
7. Locate the C1TreeExtender.ExpandCollapseHoverUsed property and set it to true.
8. Press **F5** to run your application. Note that the nodes will open when you hover over them with your mouse pointer and close when your mouse pointer leaves the node.

## Using Tree Node Checkboxes

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Using Tree Node Checkboxes

**C1TreeExtender** supports showing tree nodes with a checkbox.

1. Create a new ASP.NET Web Application.
2. In the Visual Studio Toolbox, double-click on a standard Panel control to add it to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create the list that will become the tree.

```

<li class="folder"><a>Folder 1

 <li class="folder"><a>Folder 1.1

 <li class="file"><a>File 1.1

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

 <li class="file"><a>File 1.5

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

```

```

<li class="file"><a>File 1.5

<li class="folder"><a>Folder 2

 <li class="file"><a>File 2.1

 <li class="file"><a>File 2.2

 <li class="file"><a>File 2.3

 <li class="file"><a>File 2.4

 <li class="file"><a>File 2.5

<li class="folder"><a>Folder 3

 <li class="file"><a>File 3.1

 <li class="file"><a>File 3.2

 <li class="file"><a>File 3.3

 <li class="file"><a>File 3.4

 <li class="file"><a>File 3.5

```

4. Use the Panel control's smart tag to open the Extender Wizard by clicking **Add Extender**.
5. Select the C1TreeExtender from the list and click OK to add it to the application.
6. Select **View | Properties** from the Visual Studio menu and use the drop-down list at the top of the Properties window to select Panel1\_C1TreeExtender.
7. Locate the C1TreeExtender.AllowEdit property and set it to true.
8. Locate the C1TreeExtender.ShowCheckbox property and set it to true.

- Press **F5** to run your application. The **C1TreeExtender** control should resemble the following image:

## Setting Tree Node Icons

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Setting Tree Node Icons

This topic will walk you through adding icons to C1TreeExtender's nodes. You will also learn how you can switch icons based on C1TreeExtender's current state.

- Create a new ASP.NET Web Application.
- In the Visual Studio Toolbox, double-click on a standard Panel control to add it to the main content of your page.
- Add the following markup within the `<asp:Panel>` tags to create the list that will become the tree.

```

```

```
 <li expandediconclass="ui-icon-folder-open" collapsediconclass="ui-icon-folder-collapsed"
class="folder"> <a> Folder 1
```

```

```

```

<li itemiconclass="ui-icon-document" class="file"><a>File 1.1

<li itemiconclass="ui-icon-document" class="file"><a>File 1.2

<li itemiconclass="ui-icon-document" class="file"><a>File 1.3

<li itemiconclass="ui-icon-document" class="file"><a>File 1.4

<li itemiconclass="ui-icon-document" class="file"><a>File 1.5

<li itemiconclass="ui-icon-document" class="file"><a>File 1.2

<li itemiconclass="ui-icon-document" class="file"><a>File 1.3

<li itemiconclass="ui-icon-document" class="file"><a>File 1.4

<li itemiconclass="ui-icon-document" class="file"><a>File 1.5

<li expandediconclass="ui-icon-folder-open" collapsediconclass="ui-icon-folder-collapsed"
class="folder"><a>Folder 2

 <li itemiconclass="ui-icon-document" class="file"><a>File 2.1

 <li itemiconclass="ui-icon-document" class="file"><a>File 2.2

 <li itemiconclass="ui-icon-document" class="file"><a>File 2.3

 <li itemiconclass="ui-icon-document" class="file"><a>File 2.4

 <li itemiconclass="ui-icon-document" class="file"><a>File 2.5

<li expandediconclass="ui-icon-folder-open" collapsediconclass="ui-icon-folder-collapsed"
class="folder"><a>Folder 3

```

```

<li itemiconclass="ui-icon-document" class="file"><a>File 3.1

<li itemiconclass="ui-icon-document" class="file"><a>File 3.2

<li itemiconclass="ui-icon-document" class="file"><a>File 3.3

<li itemiconclass="ui-icon-document" class="file"><a>File 3.4

<li itemiconclass="ui-icon-document" class="file"><a>File 3.5

```

4. Use the Panel control's smart tag to open the Extender Wizard by clicking Add Extender.
5. Select the C1TreeExtender from the list and click OK to add it to the application.
6. Press F5 to run your application. The C1TreeExtender should appear as in the following image.

## Dynamically Adding and Removing Tree Nodes

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Dynamically Adding and Removing Tree Nodes

This sample shows how to dynamically add and remove nodes for C1TreeExtender at client side.

1. Create a new ASP.NET Web Application.
2. In the Visual Studio Toolbox, double-click on a standard Panel control to add it to the main content of your page.
3. Add the following markup within the <asp:Panel> tags to create the list that will become the tree.

```

 <a>Folder 1

 <a>Folder 1.1

 <a>Folder 1.2

 <a>Folder 1.3

 <a>Folder 1.4

 <a>Folder 1.5

```

4. Use the Panel control's smart tag to open the Extender Wizard by clicking Add Extender.
5. Select the C1TreeExtender from the list and click OK to add it to the application.
6. Add the following script to the first set of <asp:Content> tags. This will allow you to add and remove nodes from the client-side.

```
<script type="text/javascript">

function getNode() {

 return $("#<%= Panel1.ClientID %>").wijtree("findNodeByText", "Folder 1"); ;

}

function add() {

 var node = getNode();

 if (node != null)

 node.element.wijtree("add", 'New node', parseInt($("#addIndex").val()));

}

function remove() {

 var node = getNode();

 if (node != null)
```

```
node.element.wijtree("remove", parseInt($("#removeIndex").val()));
}
</script>
```

7. Insert the following markup after the closing </ul> tag for the list. This will create the buttons and input areas for the user to add and remove nodes.

```
<div>

<input id="addNode" onclick="add();" type="button" value="Add" />

at index

<input id="addIndex" type="text" value="0" />

</div>

<div>

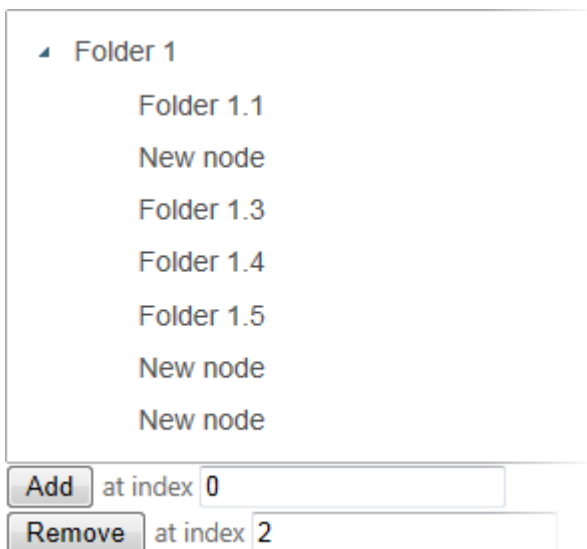

<input id="removeNode" onclick="remove();" type="button" value="Remove" />

at index

<input id="removeIndex" type="text" value="0" />

</div>
```

8. Press F5 to run your application. C1TreeExtender should resemble the following image:

## Using the Drag-and-Drop Option

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Using the Drag-and-Drop Option

C1TreeExtender supports drag-and-drop node behavior for end-user. You can use this option within one tree or between two trees.

## Using the Drag-and-Drop Within One Tree

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Using the Drag-and-Drop Option > Using the Drag-and-Drop Within One Tree

1. Create a new ASP.NET Web Application.
2. In the Visual Studio Toolbox, double-click on a standard Panel control to add it to the main content of your page.
3. Add the following markup within the `<asp:Panel>` tags to create the list that will become the tree.
4. Use the Panel control's smart tag to open the Extender Wizard by clicking Add Extender.
5. Select the C1TreeExtender from the list and click OK to add it to the application.
6. Select View | Properties from the Visual Studio menu and use the drop-down list at the top of the Properties window to select Panel1\_C1TreeExtender.
7. Locate the C1TreeExtender.AllowDrag property in the list and set it to true.
8. Locate the C1TreeExtender.AllowDrag property in the list and set it to true.
9. Press F5 to run your application. You will be able to rearrange the node structure of the tree using the drag-and-drop operation.

## Using the Drag-and-Drop Option Between Two Trees

Wijmo Control Toolkit Extender Controls > C1TreeExtender > Using the Drag-and-Drop Option > Using the Drag-and-Drop Option Between Two Trees

1. Create a new ASP.NET Web Application.
2. In the Visual Studio Toolbox, double-click on a standard Panel control to add it to the main content of your page.
3. Add the following markup within the `<asp:Panel>` tags to create the list that will become the tree.

`<ul>`

`<li class="folder"><a><span>Folder 1</span></a>`

`<ul>`

`<li class="folder"><a><span>Folder 1.1</span></a>`

```

 <li class="file"><a>File 1.1

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

 <li class="file"><a>File 1.5

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

 <li class="file"><a>File 1.5

<li class="folder"><a>Folder 2

 <li class="file"><a>File 2.1

 <li class="file"><a>File 2.2

 <li class="file"><a>File 2.3

 <li class="file"><a>File 2.4

 <li class="file"><a>File 2.5

<li class="folder"><a>Folder 3

 <li class="file"><a>File 3.1

```

```
<li class="file"><a>File 3.2

<li class="file"><a>File 3.3

<li class="file"><a>File 3.4

<li class="file"><a>File 3.5

```

5. Use the Panel control's smart tag to open the Extender Wizard by clicking Add Extender.
6. Select the C1TreeExtender from the list and click OK to add it to the application.
7. Select View | Properties from the Visual Studio menu and use the drop-down list at the top of the Properties window to select Panel1\_C1TreeExtender.
8. Locate the C1TreeExtender.AllowDrag property in the list and set it to true.
9. Locate the C1TreeExtender.AllowDrag property in the list and set it to true.
10. Add another Panel control to the main content of your page.
11. In Source View, add the following markup to the <asp:Panel> tags to create the list that will form the tree.

```

 <li class="folder"><a>Folder 1

 <li class="folder"><a>Folder 1.1

 <li class="file"><a>File 1.1

 <li class="file"><a>File 1.2

 <li class="file"><a>File 1.3

 <li class="file"><a>File 1.4

 <li class="file"><a>File 1.5

 <li class="file"><a>File 1.2
```

```

<li class="file"><a>File 1.3

<li class="file"><a>File 1.4

<li class="file"><a>File 1.5

<li class="folder"><a>Folder 2

<li class="file"><a>File 2.1

<li class="file"><a>File 2.2

<li class="file"><a>File 2.3

<li class="file"><a>File 2.4

<li class="file"><a>File 2.5

<li class="folder"><a>Folder 3

<li class="file"><a>File 3.1

<li class="file"><a>File 3.2

<li class="file"><a>File 3.3

<li class="file"><a>File 3.4

<li class="file"><a>File 3.5

```

12. Use the Panel2 control's smart tag to open the Extender Wizard by clicking Add Extender.
13. Select the C1TreeExtender from the list and click OK to add it to the application.

14. Select View | Properties from the Visual Studio menu and use the drop-down list at the top of the Properties window to select Panel2\_C1TreeExtender.
15. Locate the C1TreeExtender.AllowDrag property in the list and set it to true.
16. Locate the C1TreeExtender.AllowDrag property in the list and set it to false.
17. Press F5 to run your application. Note that you can now drag items from the first Tree and drop them into the second Tree.

## C1UploadExtender

The upload widget supports batch or single uploads and has an API for displaying upload progress.

### C1UploadExtender Markup

The following markup creates a C1UploadExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1UploadExtender ID="Panel1_C1UploadExtender" runat="server"
 TargetControlID="Panel1">
</cc1:C1UploadExtender>
```

## C1UploadExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1UploadExtender > C1UploadExtender Tutorial

This tutorial demonstrates how to attach the C1UploadExtender control to a **Panel** control and customize the tree by setting the extender properties.

## Step 1 of 3: Adding a C1UploadExtender to the Page

Wijmo Control Toolkit Extender Controls > C1UploadExtender > C1UploadExtender Tutorial > Step 1 of 3: Adding a C1UploadExtender to the Page

In this topic you add some content to a **Panel** control and associate a C1UploadExtender control with it to allow users to upload files.

1. In your Web application, add a standard **Panel** control to the main content of your page.
2. Click the Panel smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1UploadExtender** and click **OK**. A **C1UploadExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.

```
<cc1:C1UploadExtender ID="Panel1_C1UploadExtender" runat="server"
```

```
TargetControlID="Panel1">
```

```
</cc1:C1UploadExtender>
```

In the next step you will set some of the extender properties.

## Step 2 of 3: Adding Events to the Page

Wijmo Control Toolkit Extender Controls > C1UploadExtender > C1UploadExtender Tutorial > Step 2 of 3: Adding Events to the Page

In this step, you will add some events for uploading files and showing the progress.

1. With the C1UploadExtender control selected in the source, choose View | Properties Window in the Visual Studio menu.
2. In the Properties window, add the following text next to the properties:

OnClientChange	<b>change</b>
OnClientComplete	<b>complete</b>
OnClientProgress	<b>progress</b>
OnClientTotalComplete	<b>totalComplete</b>
OnClientTotalProgress	<b>totalProgress</b>
OnClientTotalUpload	<b>totalUpload</b>
OnClientUpload	<b>upload</b>

3. Add the script that corresponds with the events:

```
<script type="text/javascript">

 var supportXhr;

 var progressbar;

 function change(e, data) {

 }

 function complete(e, data) {

 }

 function progress(e, data) {

 }

 function totalComplete() {

 progressbar.fadeOut(1500, function () {
```

```

 if (supportXhr) {

 $("#progressbar").wijprogressbar("option", "value", 0);

 }

 });

}

function totalProgress(e, data) {

 if (supportXhr) {

 $("#progressbar").wijprogressbar("option", "maxValue", data.total);

 $("#progressbar").wijprogressbar("option", "value", data.loaded);

 }

}

function totalUpload() {

 progressbar.show();

}

function upload(e, data) {

}

function pageLoad() {

 progressbar = $("#progressbar");

 supportXhr = $("#ctl00_MainContent_uploadPanel").wijupload("supportXhr");

 if (supportXhr) {

 progressbar.wijprogressbar({ value: 0 });

 } else {

 progressbar.addClass("Loading");

 }

 progressbar.hide();

}

```

</script>

Now run the project to upload files.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1UploadExtender > C1UploadExtender Tutorial > Step 3 of 3: Running the Project

Press **F5** to run the project and view the following:

1. Click the **Upload files** button.
2. Select a file to upload.
3. Click **Upload All**.

The progress bar shows the progress of the upload

## C1VideoExtender

Use the C1VideoExtender control to play videos in HTML5. Note that not all browsers currently support HTML5. Make sure that you are using a browser that does in order to view the video.

### C1VideoExtender Markup

The following markup creates the C1VideoExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1VideoExtender ID="Panel1_C1VideoExtender" runat="server"
 TargetControlID="Panel1">
</cc1:C1VideoExtender>
```

## C1VideoExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1VideoExtender > C1VideoExtender Tutorial

This tutorial demonstrates how to attach the C1VideoExtender control to a **Panel** control and customize the video player.

### Step 1 of 3: Adding a C1VideoExtender to the Page

Wijmo Control Toolkit Extender Controls > C1VideoExtender > C1VideoExtender Tutorial > Step 1 of 3: Adding a C1VideoExtender to the Page

In this topic you add some content to a **Panel** control and associate a C1VideoExtender control with it to create a video player.

1. In your Web application, add a standard **Panel** control to the main content of your page.
2. Click the **Panel** smart tag and select **Add Extender** from the **Panel Tasks** menu.
3. In the **Extender Wizard**, select **C1VideoExtender** and click **OK**. A **C1VideoExtender** control is added to the page and the **TargetControlID** is set to **Panel1**.

```
<cc1:C1VideoExtender ID="Panel1_C1VideoExtender" runat="server"
 TargetControlID="Panel1">
</cc1:C1VideoExtender>
```

In the next step you will set some of the extender properties.

### Step 2 of 3: Adding a Video

Wijmo Control Toolkit Extender Controls > C1VideoExtender > C1VideoExtender Tutorial > Step 2 of 3: Adding a Video

In this topic you will add a video for the C1VideoExtender.

1. Add a video to your project.
2. Add the following XAML markup to the markup for the Panel control associated with the C1VideoExtender:

```
<asp:Panel ID="Panel1" runat="server">

 <video controls id="vid1" width="480" height="204">

 <source src="http://cdn.wijmo.com/movies/sintel-
trailer.ogv" type='video/ogg; codecs="theora, vorbis"'>

 <source src="http://cdn.wijmo.com/movies/sintel-
trailer.mp4" type='video/mp4; codecs="avc1.42E01E, mp4a.40.2"'>

 </video>

</asp:Panel>
```

Now run the project to watch the video.

## Step 3 of 3: Running the Project

Wijmo Control Toolkit Extender Controls > C1VideoExtender > C1VideoExtender Tutorial > Step 3 of 3: Running the Project

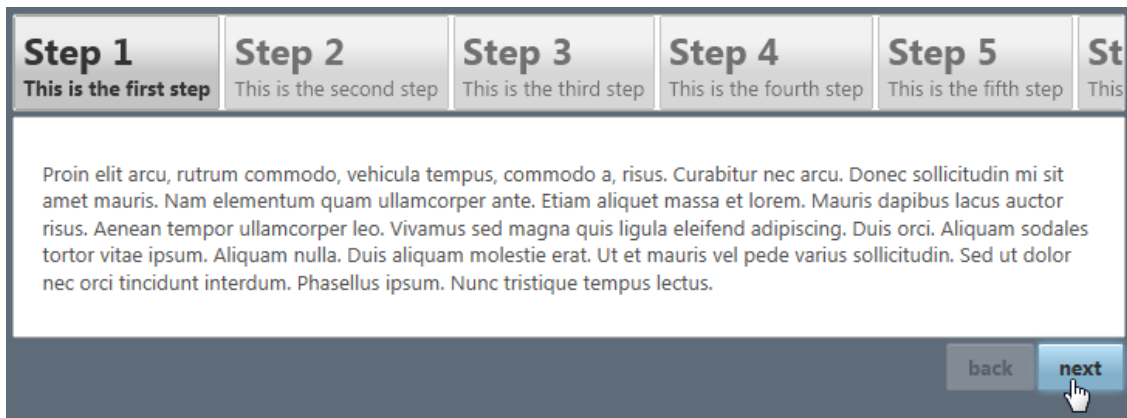

Press **F5** to run the project. Hover the player to make the control buttons appear. You can play and pause, adjust the volume, and switch to full screen mode using the player's buttons.

## C1WizardExtender

The C1WizardExtender control is used to display sections of content on separate, navigable pages so you can save screen real estate or simplify input tasks by creating a series of forms. For easy navigation, you can use wijwizard's built-in navigation buttons or its autoplay feature.

And if you'd like to add extra flair to the wijwizard, you can combine it with the wijpager widget for paged navigation.

### C1WizardExtender Markup

The following markup creates C1WizardExtender control. Set the **TargetControlID** property to attach the extender to a control.

```
<cc1:C1WizardExtender ID="Panel1_C1WizardExtender" runat="server"
 TargetControlID="Panel1">
</cc1:C1WizardExtender>
```

## C1WizardExtender Tutorial

Wijmo Control Toolkit Extender Controls > C1WizardExtender > C1WizardExtender Tutorial

This tutorial demonstrates how to attach the **C1WizardExtender** control to a **Panel** control and customize the wizard by setting the extender properties.

### Step 1 of 4: Setting up the Panel

Wijmo Control Toolkit Extender Controls > C1WizardExtender > C1WizardExtender Tutorial > Step 1 of 4: Setting up the Panel

In this topic you will add a **Panel** control with some content that will become the wizard content.

1. In the Visual Studio Toolbox, double-click the Panel control to add a panel to the main content of the page.
2. Add some content to the panel. The list items will become the tab headers in the wizard and the <div> elements will form the content area. For example:

```
<asp:Panel ID="Panel1" runat="server">
```

```

 <h1>

 Step 1</h1>

 This is the first step

 <h1>

 Step 2</h1>

 This is the second step

 <h1>

 Step 3</h1>

 This is the third step

 <h1>

 Step 4</h1>

 This is the fourth step

 <h1>

 Step 5</h1>

 This is the fifth step

<div>

 <h4>

 Studio Enterprise</h4>
```

<p>

Seven platforms, hundreds of controls, one studio.  
Build awesome desktop, Web, and

mobile apps with our tools for WinForms, WPF,  
ASP.NET, Silverlight, iPhone, Mobile,

and ActiveX.</p>

</div>

<div>

<h4>

Studio for WinForms</h4>

<p>

Over 65 .NET controls, including the ones you can't  
get anywhere else. Studio for

WinForms can handle anything, from a grid with a  
million rows to a chart with unlimited

points.</p>

</div>

<div>

<h4>

Studio for WPF</h4>

<p>

Studio for WPF offers everything from advanced data  
binding to rich data visualizations

included in grids, schedulers, charts, reports, and  
more.</p>

</div>

<div>

<h4>

Studio for ASP.NET Web Forms</h4>

```

 <p>
 Do more with less code. Over 45 styled, supercharged,
 and easy-to-use controls built
 on Web standards including CSS and XHTML.</p>
 </div>
 <div>
 <h4>
 Studio for Silverlight</h4>
 <p>
 Industrial strength Silverlight controls you cannot find
 anywhere else. Download
 ComponentOne Studio for Silverlight, play, and watch
 the Web shine.</p>
 </div>
 </asp:Panel>

```

Next, add a **C1WizardExtender** control and associate it with the panel.

## Step 2 of 4: Adding a C1WizardExtender to the Page

Wijmo Control Toolkit Extender Controls > C1WizardExtender > C1WizardExtender Tutorial > Step 2 of 4: Adding a C1WizardExtender to the Page

In this step, you will add a C1WizardExtender control to associate with the panel.

1. Drag a C1WizardExtender control to the form from the Visual Studio Toolbox.
2. Set the **TargetControlID** property to **Panel1**. The markup looks like this:

```

<cc1:C1WizardExtender ID="Panel1_C1WizardExtender" runat="server"
 TargetControlID="Panel1">
</cc1:C1WizardExtender>

```

Now set some properties to customize the wizard.

## Step 3 of 4: Customizing the Wizard

Wijmo Control Toolkit Extender Controls > C1WizardExtender > C1WizardExtender Tutorial > Step 3 of 4: Customizing the Wizard

In this topic you will set some of the properties for the **C1WizardExtender** control.

1. Select **View | Properties Window** in the Visual Studio menu.
2. Click the drop-down list at the top of the window and select **Panel1\_WizardExtender**.
3. Set the C1WizardExtender.AutoPlay properties to True.
4. Set the C1WizardExtender.NavButtons property to Edge. The markup will look like this:

```
<cc1:C1WizardExtender ID="Panel1_C1WizardExtender" runat="server"
 TargetControlID="Panel1" AutoPlay="True" NavButtons="Edge">

</cc1:C1WizardExtender>
```

Now run the project to see the wizard.

## Step 4 of 4: Running the Project

Wijmo Control Toolkit Extender Controls > C1WizardExtender > C1WizardExtender Tutorial > Step 4 of 4: Running the Project

Press **F5** to run the project and view the following:

- Notice the arrow navigation buttons. If the C1WizardExtender.NavButtons property is set to Common, Back and Next buttons are used for navigation.
- Since the C1WizardExtender.AutoPlay property is set to True, the wizard will automatically advance through the steps.

## Animating the C1WizardExtender

Wijmo Control Toolkit Extender Controls > C1WizardExtender > Animating the C1WizardExtender

C1WizardExtender supports animation when opening or hiding page content. Animation is controlled by the C1WizardExtender.ShowOption property and the C1WizardExtender.HideOption property.

1. Create a new ASP.NET Web application.
2. In the Visual Studio Toolbox, double-click the Panel control to add a panel to the main content of the page.
3. Add some content to the Panel control as in the following markup by inserting the markup between the <asp:Panel> tags.

```

 <h1>

 Step 1</h1>

 This is the first step

 <h1>

 Step 2</h1>

 This is the second step

 <h1>

 Step 3</h1>

 This is the third step

<div>

 <p>
```

```

Duis cursus. Maecenas ligula eros, blandit nec, pharetra at, semper at, magna. Nullam ac lacus. Nulla facilisi. Praesent viverra justo vitae neque. Praesent blandit adipiscing velit. Suspendisse potenti. Donec mattis, pede vel pharetra blandit, magna ligula faucibus eros, id euismod lacus dolor eget odio. Nam scelerisque. Donec non libero sed nulla mattis commodo. Ut sagittis. Donec nisi lectus, feugiat porttitor, tempor ac, tempor vitae, pede. Aenean vehicula velit eu tellus interdum rutrum. Maecenas commodo. Pellentesque nec elit. Fusce in lacus. Vivamus a libero vitae lectus hendrerit hendrerit.</p>

</div>

4. Click on the Panel's smart tag to open the Panel Tasks menu and click on Add Extender to open the Extender Wizard.
5. Select the C1WizardExtender from the list and click OK. The C1WizardExtender control is added to your page.
6. Select View | Properties Window in the Visual Studio menu.
7. Use the drop-down list at the top of the Properties Window to select Panel1\_C1WizardExtender from the list.
8. Locate the C1WizardExtender.HideOption property and use the arrows to open the submenu. Set Blind and Fade to true.
9. Locate the C1WizardExtender.ShowOption property and use the arrows to open the submenu. Set Blind and Fade to true.
10. Press F5 to run your program. Note how the content in the Wizard behaves during page changes.

# Setting the C1WizardExtender Simple Mode

Wijmo Control Toolkit Extender Controls > C1WizardExtender > Setting the C1WizardExtender Simple Mode

1. C1WizardExtender supports displaying items without a tabbed interface. You can do this by using content that is separated by <div> tags.
2. Create a new ASP.NET Web application.
3. In the Visual Studio Toolbox, double-click the Panel control to add a panel to the main content of the page.
4. Add some content to the panel as in the following markup by inserting the markup between the <asp:Panel> tags. By putting content in <div> tags and not using headers, the content will appear in a C1WizardExtender control without tabs.

<div>

<p>

Proin elit arcu, rutrum commodo, vehicula tempus, commodo a, risus. Curabitur nec arcu. Donec sollicitudin mi sit amet mauris. Nam elementum quam ullamcorper ante. Etiam aliquet massa et lorem. Mauris dapibus lacus auctor risus. Aenean tempor ullamcorper leo. Vivamus sed magna quis ligula eleifend adipiscing. Duis orci. Aliquam sodales tortor vitae ipsum. Aliquam nulla. Duis aliquam molestie erat. Ut et mauris vel pede varius sollicitudin. Sed ut dolor nec orci tincidunt interdum. Phasellus ipsum. Nunc tristique tempus lectus.

</div>

<div>

<p>

Morbi tincidunt, dui sit amet facilisis feugiat, odio metus gravida ante, ut pharetra massa metus id nunc. Duis scelerisque molestie turpis. Sed fringilla, massa eget luctus malesuada, metus eros molestie lectus, ut tempus eros massa ut dolor. Aenean aliquet fringilla sem. Suspendisse sed ligula in ligula suscipit aliquam. Praesent in eros vestibulum mi adipiscing adipiscing. Morbi facilisis. Curabitur ornare consequat nunc. Aenean vel metus. Ut posuere viverra nulla. Aliquam erat volutpat. Pellentesque convallis. Maecenas feugiat, tellus pellentesque pretium posuere, felis lorem euismod felis, eu ornare leo nisi vel felis. Mauris consectetur tortor et purus.

</div>

<div>

<p>

Mauris eleifend est et turpis. Duis id erat. Suspendisse potenti. Aliquam vulputate, pede vel vehicula accumsan, mi neque rutrum erat, eu congue orci lorem eget lorem. Vestibulum non ante. Class aptent taciti sociosqu ad litora torquent per conubia nostra,

per inceptos himenaeos. Fusce sodales. Quisque eu urna vel enim commodo pellentesque. Praesent eu risus hendrerit ligula tempus pretium. Curabitur lorem enim, pretium nec, feugiat nec, luctus a, lacus.

Duis cursus. Maecenas ligula eros, blandit nec, pharetra at, semper at, magna. Nullam ac lacus. Nulla facilisi. Praesent viverra justo vitae neque. Praesent blandit adipiscing velit. Suspendisse potenti. Donec mattis, pede vel pharetra blandit, magna ligula faucibus eros, id euismod lacus dolor eget odio. Nam scelerisque. Donec non libero sed nulla mattis commodo. Ut sagittis. Donec nisi lectus, feugiat porttitor, tempor ac, tempor vitae, pede. Aenean vehicula velit eu tellus interdum rutrum. Maecenas commodo. Pellentesque nec elit. Fusce in lacus. Vivamus a libero vitae lectus hendrerit hendrerit.

Studio Enterprise

Seven platforms, hundreds of controls, one studio. Build awesome desktop, Web, and mobile apps with our tools for WinForms, WPF, ASP.NET, Silverlight, iPhone, Mobile, and ActiveX.

Studio for WinForms

Over 65 .NET controls, including the ones you can't get anywhere else. Studio for WinForms can handle anything, from a grid with a million rows to a chart with unlimited points.

Studio for WPF

<p>

Studio for WPF offers everything from advanced data binding to rich data visualizations included in grids, schedulers, charts, reports, and more. </p>

</div>

<div>

<h4>

Studio for ASP.NET </h4>

<p>

Do more with less code. Over 45 styled, supercharged, and easy-to-use controls built on Web standards including AJAX, CSS, and XHTML. </p>

</div>

<div>

<h4>

Studio for Silverlight </h4>

<p>

Industrial strength Silverlight controls you cannot find anywhere else. Download Studio for Silverlight, play, and watch the Web shine. </p>

</div>

<div>

<h4>

Studio for iPhone </h4>

<p>

Use your existing ASP.NET skill set and take your Web apps to the iPhone. Studio for iPhone gives you the iPhone UX. </p>

</div>

5. Click on the Panel's smart tag to open the Panel Tasks menu and click on Add Extender to open the Extender Wizard.
6. Select the C1WizardExtender from the list and click OK. The C1WizardExtender control is added to your page.
7. Press F5 to run your program. Your page should resemble the following image:

# Autoplaying the C1WizardExtender

Wijmo Control Toolkit Extender Controls > C1WizardExtender > Autoplaying the C1WizardExtender

C1WizardExtender supports showing each page in order automatically.

1. Create a new ASP.NET Web application.
2. In the Visual Studio Toolbox, double-click the Panel control to add a panel to the main content of the page.
3. Add some content to the Panel control as in the following markup by inserting the markup between the <asp:Panel> tags.

```

 <h1>

 Step 1</h1>

 This is the first step

 <h1>

 Step 2</h1>

 This is the second step

 <h1>

 Step 3</h1>

 This is the third step

<div>

 <p>
```

Proin elit arcu, rutrum commodo, vehicula tempus, commodo a, risus. Curabitur nec arcu. Donec sollicitudin mi sit amet mauris. Nam elementum quam ullamcorper ante. Etiam aliquet massa et lorem. Mauris dapibus lacus auctor risus. Aenean tempor ullamcorper leo. Vivamus sed magna quis ligula eleifend adipiscing. Duis orci. Aliquam sodales tortor vitae ipsum. Aliquam nulla. Duis aliquam molestie erat. Ut et mauris vel pede varius sollicitudin. Sed ut dolor nec orci tincidunt interdum. Phasellus ipsum. Nunc tristique tempus lectus.

</div>

<div>

<p>

Morbi tincidunt, dui sit amet facilisis feugiat, odio metus gravida ante, ut pharetra massa metus id nunc. Duis scelerisque molestie turpis. Sed fringilla, massa eget luctus malesuada, metus eros molestie lectus, ut tempus eros massa ut dolor. Aenean aliquet fringilla sem. Suspendisse sed ligula in ligula suscipit aliquam. Praesent in eros vestibulum mi adipiscing adipiscing. Morbi facilisis. Curabitur ornare consequat nunc. Aenean vel metus. Ut posuere viverra nulla. Aliquam erat volutpat. Pellentesque convallis. Maecenas feugiat, tellus pellentesque pretium posuere, felis lorem euismod felis, eu ornare leo nisi vel felis. Mauris consectetur tortor et purus.

</div>

<div>

<p>

Mauris eleifend est et turpis. Duis id erat. Suspendisse potenti. Aliquam vulputate, pede vel vehicula accumsan, mi neque rutrum erat, eu congue orci lorem eget lorem. Vestibulum non ante. Class aptent taciti sociosqu ad litora torquent per conubia nostra, per inceptos himenaeos. Fusce sodales. Quisque eu urna vel enim commodo pellentesque. Praesent eu risus hendrerit ligula tempus pretium. Curabitur lorem enim, pretium nec, feugiat nec, luctus a, lacus.

<p>

Duis cursus. Maecenas ligula eros, blandit nec, pharetra at, semper at, magna. Nullam ac lacus. Nulla facilisi. Praesent viverra justo vitae neque. Praesent blandit adipiscing velit. Donec nisi lectus, feugiat porttitor, tempor ac, tempor vitae, pede. Aenean vehicula velit eu tellus interdum rutrum. Maecenas commodo. Pellentesque nec elit. Fusce in lacus. Vivamus a libero vitae lectus hendrerit hendrerit.

</div>

4. Click on the Panel's smart tag to open the Panel Tasks menu and click on Add Extender to open the Extender Wizard.

5. Select the C1WizardExtender from the list and click OK. The C1WizardExtender control is added to your page.
6. Select View | Properties Window in the Visual Studio menu.
7. Use the drop-down list at the top of the Properties Window to select Panel1\_C1WizardExtender from the list.
8. Locate the C1WizardExtender.AutoPlay property in the list and set it to true.
9. Press F5 to run your application. The C1WizardExtender will automatically move through the pages.

## **C1.Web.Wijmo.Extenders.4 Assembly**

### Namespaces

### C1.Web.Wijmo.Extenders Namespace

#### Overview

#### Classes

	Class	Description
	AjaxSettings	Define the settings of the jQuery ajax options.
	AnimatedOption	Represents the AnimatedOption class which contains all of the settings for the Animation's animated option.
	Animation	Define the options for the jQuery animation.
	ArrayItemTypeAttribute	Use this attribute in order to specify the type of the item for the array property.
	BlindOption	Define the animation options for Tabs and Wizard.
	CollectionItemTypeAttribute	Use this attribute in order to specify the type of the item for the collection property.

	Collision	A class of the position's collision option.
	ContentOption	It defines the option which can be a javascript function or string. It used in chart and tooltip.
	JsonAttribute	Attribute used to specifying whether Json helper need to serialize member what owns this attribute.
	JsonHelper	JsonHelper class. Contains static methods for working with JSON strings.
	LoadSettings	Define the settings of the jQuery ajax load options.
	ObjectValue	Represents value of an object that need to serialize manually.
	Offset	A class of the position's offset option.
	Position	A class of the position's my and at option.
	PositionSettings	Define the settings of the jQuery position utility.
	ResizeSettings	Define the options for the jQuery resizable plug-in.
	Settings	The settings for widget's options.
	SlideAnimation	Define the jQuery slide animation.
	TargetCompositeControlBase	Class to be used as base for the wijmo extenders target controls.
	TargetControlBase	Class to be used as base for the wijmo extenders target controls. Class to be used as base for the wijmo extenders target base controls.

	TargetDataBoundControlBase	Class to be used as base for the wijmo extenders target controls.
	WidgetConditionalDependencyAttribute	Determines conditional extender dependencies from .js, .css or other extenders.
	WidgetDependenciesAttribute	Determines extender dependencies from .js, .css or other extenders.
	WidgetDescriptor	Represents that how to defines script that creates an instance of a client widget class.
	WidgetEventAttribute	Use this attribute in order to mark property as widget event.
	WidgetExtenderControlBase	Base class for the Wijmo extender controls.
	WidgetFunctionAttribute	Use this attribute in order to mark property as widget javascript function.
	WidgetObjectBuilder	Represents a builder of widget object.
	WidgetOptionAttribute	Use this attribute in order to mark property as widget option.
	WidgetOptionNameAttribute	Use this attribute in order to change name of the option.
	WijmoCssAdapterConverter	Provides a type converter to convert an wijmo ThemeSwatch name to and from other representations.
	WijmoHttpHandler	A handler to render the combined script resources.
	WijmoThemeNameConverter	Provides a type converter to convert an wijmo theme name to and from other representations.

	WijmoThemeSwatchConverter	Provides a type converter to convert an wijmo ThemeSwatch name to and from other representations.
-----------------------------------------------------------------------------------	---------------------------	---------------------------------------------------------------------------------------------------

## Interfaces

	Interface	Description
	IC1Cloneable	Supports cloning.
	IJsonEmptiable	Interface used by serialization to check if an object should be serialized.
	IWijmoWidgetDependenciesSupport	Infrastructure. Indicates a class which can have WidgetConditionalDependencyAttribute or WidgetDependenciesAttribute attribute specified. This is a marker interface only.
	IWijmoWidgetSupport	Support wijmo widget.

## Enumerations

	Enumeration	Description
	CollisionMode	When the positioned element overflows the window in some direction, move it to an alternative position
	Compass	The Compass enumerator is used to define the compass.
	Direction	
	Easing	Specifies the transition for objects being animated.
	HPosition	For jQuery ui position utility's "my" and "at" option. The value contains two words combined by blank character. This is the first word.
	Orientation	Orientation type

	RequestType	Ajax request type.
	SelectionMode	SelectionMode.
	VPosition	For jQuery ui position utility's "my" and "at" option. The value contains two words combined by blank character. This is the second word.
	WijmoControlMode	Mode of the control

## Members

Properties Methods

C1.Web.Wijmo.Extenders Namespace : Animation Class

The following tables list the members exposed by Animation.

## Public Constructors

	Name	Description
	Animation Constructor	Animation constructor.

[Top](#)

## Public Properties

	Name	Description
	Animated	Determines the effects to animate. If user want disabled the animation, can set the Animation.disabled = true. If user want set an animation effect, such as "slide", "fade", user set the animation.effect = "slide"
	Duration	Defines the amount of time the animation is displayed.
	Easing	Determines the easing effect to be applied to the animation. There are over 30 easing effects, including Linear, Swing, EaseInBounce, EaseOutBounce and many more.
	Option	Defines the option for some effects. If user set the animated to "slide", in jQuery.Effect plugin, the slide effect contains some arguments such as direction, distance

[Top](#)

## Protected Properties

	Name	Description
	Props	Gets a hashtable to store property info. (Inherited from C1.Web.Wijmo.Extenders.Settings)

[Top](#)

## Protected Methods

	Name	Description
--	------	-------------

	GetProperty<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)
	SetProperty<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)
	TestProperty<V>	Tests the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.Settings)

## ObjectToString(Object,IUrlResolutionService) Method

C1.Web.Wijmo.Extenders Namespace > JsonHelper Class > ObjectToString Method :

ObjectToString(Object,IUrlResolutionService) Method

Required. Object to convert into JSON string

Optional. URL Resolution Service

Converts object into JSON string.

## Syntax

Visual Basic (Declaration)

```
Public Overloads Shared Function ObjectToString(_
 ByVal obj As System.Object, _
 ByVal urlResolutionService As System.Web.UI.IUrlResolutionService _
) As System.String
```

C#

```
public static System.string ObjectToString(
 System.object obj,
 System.Web.UI.IUrlResolutionService urlResolutionService
)
```

## Parameters

*obj*

Required. Object to convert into JSON string

*urlResolutionService*

Optional. URL Resolution Service

## Return Value

Javascript object notation string

## See Also

## ObjectToString(Object,IUrlResolutionService,Boolean) Method

C1.Web.Wijmo.Extenders Namespace > JsonHelper Class > ObjectToString Method :

ObjectToString(Object,IUrlResolutionService,Boolean) Method

Required. Object to convert into JSON string

Required. URL Resolution Service

if set to `true` writer will serialize all public properties and public fields, `JsonAttribute` will be ignored.

Converts object into JSON string.

## Syntax

Visual Basic (Declaration)

```
Public Overloads Shared Function ObjectToString(_
 ByVal obj As System.Object, _
 ByVal urlResolutionService As System.Web.UI.IUrlResolutionService, _
 ByVal serializeAll As System.Boolean _
) As System.String
```

C#

```
public static System.string ObjectToString(
 System.object obj,
 System.Web.UI.IUrlResolutionService urlResolutionService,
 System.bool serializeAll
)
```

## Parameters

*obj*

Required. Object to convert into JSON string

*urlResolutionService*

Required. URL Resolution Service

*serializeAll*

if set to `true` writer will serialize all public properties and public fields, `JsonAttribute` will be ignored.

## Return Value

Javascript object notation string

## See Also

## WidgetToString Method

C1.Web.Wijmo.Extenders Namespace > JsonHelper Class : WidgetToString Method

Required. Object to convert into JSON string

Optional. URL Resolution Service

Converts object into JSON string. Difference from `ObjectToString` method: 1) All field/property names will be converted to camelCase. 2) All enumerations will be converted to string value.

## Syntax

Visual Basic (Declaration)	
<pre>Public Shared Function WidgetToString( _     ByVal obj As System.Object, _     ByVal urlResolutionService As System.Web.UI.IUrlResolutionService _ ) As System.String</pre>	
C#	
<pre>public static System.string WidgetToString(     System.object obj,     System.Web.UI.IUrlResolutionService urlResolutionService )</pre>	

## Parameters

*obj*

Required. Object to convert into JSON string

*urlResolutionService*

Optional. URL Resolution Service

## Return Value

Javascript object notation string

## See Also

## Reference

JsonHelper Class

## WidgetToStringQuoteClientEvents Method

C1.Web.Wijmo.Extenders Namespace > JsonHelper Class : WidgetToStringQuoteClientEvents Method

Required. Object to convert into JSON string

Optional. URL Resolution Service

Converts object into JSON string. Difference from `WidgetToString` method: 1) All client events will be quoted.

## Syntax

Visual Basic (Declaration)

```
Public Shared Function WidgetToStringQuoteClientEvents(_
 ByVal obj As System.Object, _
 ByVal urlResolutionService As System.Web.UI.IUrlResolutionService _
) As System.String
```

C#

```
public static System.string WidgetToStringQuoteClientEvents(
 System.object obj,
 System.Web.UI.IUrlResolutionService urlResolutionService
)
```

### Parameters

*obj*

Required. Object to convert into JSON string

*urlResolutionService*

Optional. URL Resolution Service

### Return Value

Javascript object notation string

C#

```
[C1Description("A value that indicates the css class that will be added to a
proxy element to outline the resize.")]
[System.ComponentModel.DefaultValue()]
[WidgetOption()]
[System.ComponentModel.NotifyParentProperty(true)]
public System.string Helper {get; set;}
```

## Remarks

This is the css class that will be added to a proxy element to outline the resize during the drag of the resize handle. Once the resize is complete, the original element is sized. The value can be Boolean and String.

## GetProperty<V> Method

C1.Web.Wijmo.Extenders Namespace > TargetControlBase Class : GetProperty<V> Method

Name of the property.

The null value.

Gets the property value by property name.

### Syntax

Visual Basic (Declaration)	
<pre>Protected Function GetProperty(Of V)( _     ByVal <i>propertyName</i> As System.String, _     ByVal <i>nullValue</i> As V _ ) As V</pre>	
C#	
<pre>protected V GetProperty&lt;V&gt;(     System.string <i>propertyName</i>,     V <i>nullValue</i> )</pre>	

### Parameters

*propertyName*

Name of the property.

*nullValue*

The null value.

### Type Parameters

*V*

## GetPropertyValue<V> Method

C1.Web.Wijmo.Extenders Namespace > TargetDataBoundControlBase Class : GetPropertyValue<V> Method

Name of the property.

The null value.

Gets the property value by property name.

## Syntax

Visual Basic (Declaration)	
Protected Function GetPropertyValue(Of V)( _ ByVal <i>propertyName</i> As System.String, _ ByVal <i>nullValue</i> As V _ ) As V	
C#	
protected V GetPropertyValue<V>( System.string <i>propertyName</i> , V <i>nullValue</i> )	

### Parameters

*propertyName*

Name of the property.

*nullValue*

The null value.

## Type Parameters

V

## See Also

TargetDataBoundControlBase Members

## SetPropertyValue<V> Method

C1.Web.Wijmo.Extenders Namespace > TargetDataBoundControlBase Class : SetPropertyValue<V> Method

Name of the property.

The value.

Sets the property value by property name.

## Syntax

Visual Basic (Declaration)

```
Protected Sub SetPropertyValue(Of V)(_
 ByVal propertyName As System.String, _
 ByVal value As V _
)
```

C#

```
protected void SetPropertyValue<V>(
 System.string propertyName,
 V value
)
```

## Parameters

*propertyName*

Name of the property.

*value*

The value.

## Type Parameters

V

## WidgetConditionalDependencyAttribute Constructor

C1.Web.Wijmo.Extenders Namespace > WidgetConditionalDependencyAttribute Class :

WidgetConditionalDependencyAttribute Constructor

A dependency, see the WidgetDependencyAttribute.Dependencies property for more details.

Defines the type, the instance of which is designed for resolve the dependency.

Initializes a new instance of the WidgetConditionalDependencyAttribute class.

## Syntax

Visual Basic (Declaration)

```
Public Function New(_
 ByVal dependency As System.Object, _
 ByVal resolver As System.Type _
)
```

C#

```
public WidgetConditionalDependencyAttribute(
 System.object dependency,
 System.Type resolver
)
```

### Parameters

*dependency*

A dependency, see the WidgetDependencyAttribute.Dependencies property for more details.

*resolver*

Defines the type, the instance of which is designed for resolve the dependency.

WidgetDependenciesAttribute Constructor

## Overload List

Overload	Description
WidgetDependenciesAttribute Constructor(String[])	Initializes a new instance of the WidgetDependenciesAttribute class.

WidgetDependenciesAttribute Constructor(Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.

	of the WidgetDepend enciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDepend enciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDepend enciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDepend enciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject)	Initializes a new instance of the WidgetDepend enciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject,Object)	Initializes a new instance of the WidgetDepend

	enciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject,Object,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject,Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject,Object,Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.
WidgetDependenciesAttribute Constructor(Object,Object,Object,Object,Object,Object,Object,Object,Object,Ob ject,Object,Object,Object,Object,Object,Object)	Initializes a new instance of the WidgetDependenciesAttribute class.

## Members

Properties Methods Events

C1.Web.Wijmo.Extenders Namespace : WidgetExtenderControlBase Class

The following tables list the members exposed by WidgetExtenderControlBase.

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on.
	CDNPath	Content Delivery Network path.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)

	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config.
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once.
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make

		sure that all widget extenders have the same Theme value.
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath.
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap.

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)

	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	

[Top](#)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Overridden. Enables a server control to perform final clean up before it is released from memory.
	EnsureValid	
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name.
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)

	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name.
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

[Top](#)

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)

	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control.
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	Overridden. When overridden in a derived class, registers the <b>WidgetDescriptor</b> objects for the control.
	GetScriptReferences	Overridden. When overridden in a derived class, registers an additional script libraries for the extender control.
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Overridden. Raises the <b>System.Web.UI.Control.Init</b> event.
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)

	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

C1.Web.Wijmo.Extenders Namespace

### CheckIfValid Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : CheckIfValid Method

## Syntax

Visual Basic (Declaration)

```
Protected Overridable Function CheckIfValid(_
 ByVal throwException As System.Boolean _
```

```
) As System.Boolean
```

```
C#
```

```
protected virtual System.bool CheckIfValid(
 System.bool throwException
)
```

### Parameters

*throwException*

## See Also

### Reference

WidgetExtenderControlBase Class

WidgetExtenderControlBase Members

## Dispose Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : Dispose Method

Enables a server control to perform final clean up before it is released from memory.

## Syntax

Visual Basic (Declaration)

```
Public Overrides Sub Dispose()
```

```
C#
```

```
public override void Dispose()
```

## See Also

## EnsureValid Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : EnsureValid Method

## Syntax

Visual Basic (Declaration)

```
Public Overridable Sub EnsureValid()
```

C#

```
public virtual void EnsureValid()
```

## See Also

### Reference

WidgetExtenderControlBase Class

WidgetExtenderControlBase Members

## GetCulture Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : GetCulture Method

Get the culture setting of this control.

## Syntax

Visual Basic (Declaration)

```
Protected Overridable Function GetCulture(_
 ByVal culture As System.Globalization.CultureInfo _
) As System.Globalization.CultureInfo
```

C#

```
protected virtual System.Globalization.CultureInfo GetCulture(
 System.Globalization.CultureInfo culture
)
```

### Parameters

*culture*

## See Also

## GetPropertyValue<V> Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : GetPropertyValue<V> Method

Name of the property.

The null value.

Gets the property value by property name.

## Syntax

Visual Basic (Declaration)	
<pre>Public Function GetPropertyValue(Of V)( _     ByVal <i>propertyName</i> As System.String, _     ByVal <i>nullValue</i> As V _ ) As V</pre>	
C#	
<pre>public V GetPropertyValue&lt;V&gt;(     System.string <i>propertyName</i>,     V <i>nullValue</i> )</pre>	

## Parameters

*propertyName*

Name of the property.

*nullValue*

The null value.

## Type Parameters

*V*

## See Also

## Reference

WidgetExtenderControlBase Class  
 WidgetExtenderControlBase Members

## GetScriptDescriptors Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : GetScriptDescriptors Method

The server control to which the extender is associated.

When overridden in a derived class, registers the WidgetDescriptor objects for the control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Function GetScriptDescriptors( _     ByVal targetControl As System.Web.UI.Control _ ) As System.Collections.Generic.IEnumerable(Of ScriptDescriptor)</pre>	
C#	
<pre>protected override System.Collections.Generic.IEnumerable&lt;ScriptDescriptor&gt; GetScriptDescriptors(     System.Web.UI.Control targetControl )</pre>	

### Parameters

*targetControl*

The server control to which the extender is associated.

### Return Value

An enumeration of WidgetDescriptor objects.

## See Also

### Reference

WidgetExtenderControlBase Class

WidgetExtenderControlBase Members

## GetScriptReferences Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : GetScriptReferences Method

When overridden in a derived class, registers an additional script libraries for the extender control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Function GetScriptReferences() As System.Collections.Generic.IEnumerable(Of ScriptReference)</pre>	
C#	
<pre>protected override System.Collections.Generic.IEnumerable&lt;ScriptReference&gt; GetScriptReferences()</pre>	

## Return Value

An object that implements the **System.Collections.IEnumerable** interface and that contains ECMAScript (JavaScript) files that have been registered as embedded resources.

## See Also

### Reference

WidgetExtenderControlBase Class

WidgetExtenderControlBase Members

## OnInit Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : OnInit Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.Init** event.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnInit( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnInit( System.EventArgs e )	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

WidgetExtenderControlBase Class

WidgetExtenderControlBase Members

## OnPreRender Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

## Reference

WidgetExtenderControlBase Class

WidgetExtenderControlBase Members

## Render Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
----------------------------	--

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## See Also

### Reference

WidgetExtenderControlBase Class

WidgetExtenderControlBase Members

## SetPropertyValue<V> Method

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : SetPropertyValue<V> Method

Name of the property.

The value.

Sets the property value by property name.

## Syntax

Visual Basic (Declaration)

```
Public Sub SetPropertyValue(Of V)(_
 ByVal propertyName As System.String, _
 ByVal value As V _
)
```

C#

```
public void SetPropertyValue<V>(
 System.string propertyName,
 V value
)
```

## Parameters

*propertyName*

Name of the property.

*value*

The value.

## Type Parameters

*V*

## Properties

C1.Web.Wijmo.Extenders Namespace : WidgetExtenderControlBase Class

For a list of all members of this type, see WidgetExtenderControlBase members.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on.
	CDNPath	Content Delivery Network path.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the

		WijmoHttpHandler in web.config.
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once.
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value.

	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath.
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project.
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap.

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)

	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName

## CDNDependencyPaths Property

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : CDNDependencyPaths Property

A string array value specifies all css/js references that wijmo control depends on.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSerializationVisibility.Hidden)&gt; &lt;C1CategoryAttribute("Behavior")&gt; &lt;System.ComponentModel.DefaultValueAttribute()&gt; &lt;C1DescriptionAttribute("A string array value specifies all css/js references that wijmo control depends on.")&gt; &lt;System.ComponentModel.RefreshPropertiesAttribute(RefreshProperties.All)&gt; Public Property CDNDependencyPaths As System.String()</pre>	
C#	
<pre>[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationVisibility.Hidden)] [C1Category("Behavior")] [System.ComponentModel.DefaultValue()]</pre>	

```
[C1Description("A string array value specifies all css/js references that
wijmo control depends on.")]
[System.ComponentModel.RefreshProperties(RefreshProperties.All)]
public System.string[] CDNDependencyPaths {get; set;}
```

## Remarks

Using this property, user can specify the CDN dependencies(such as jQuery, jQuery UI, jQuery mobile, bootstrap). If some dependencies are set in this property, wijmo controls will find dependencies path in this property. If found, use the path to load dependency, otherwise, use the default CDN path. For example, if user wants to specify the dependencies of jQuery and jQuery UI, he can set the value like this: ["http://ajax.aspnetcdn.com/ajax/jquery/jquery-1.11.1.min.js", "http://ajax.aspnetcdn.com/ajax/jquery.ui/1.11.1/jquery-ui.js"]

## CDNPath Property

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : CDNPath Property

Content Delivery Network path.

## Syntax

Visual Basic (Declaration)

```
<C1DescriptionAttribute("Content Delivery Network path.")>
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.DefaultValueAttribute()>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeriali
zationVisibility.Hidden)>
Public Overridable Property CDNPath As System.String
```

C#

```
[C1Description("Content Delivery Network path.")]
[C1Category("Behavior")]
[System.ComponentModel.DefaultValue()]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializat
ionVisibility.Hidden)]
public virtual System.string CDNPath {get; set;}
```

## See Also

## EnableCombinedJavaScripts Property

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : EnableCombinedJavaScripts Property

Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;C1CategoryAttribute("Behavior")&gt; &lt;System.ComponentModel.DefaultValueAttribute()&gt; &lt;C1DescriptionAttribute("Enable JavaScripts files combined into one file.")&gt; &lt;System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSerializationVisibility.Hidden)&gt; Public Overridable Property EnableCombinedJavaScripts As System.Boolean</pre>	
C#	
<pre>[C1Category("Behavior")] [System.ComponentModel.DefaultValue()] [C1Description("Enable JavaScripts files combined into one file.")] [System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationVisibility.Hidden)] public virtual System.bool EnableCombinedJavaScripts {get; set;}</pre>

## TargetSelector Property

C1.Web.Wijmo.Extenders Namespace > WidgetExtenderControlBase Class : TargetSelector Property

Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once.

## Syntax

Visual Basic (Declaration)	
<pre>&lt;System.ComponentModel.DefaultValueAttribute(&gt; &lt;System.ComponentModel.DescriptionAttribute("Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once.")&gt; &lt;System.ComponentModel.CategoryAttribute("Behavior")&gt; Public Property TargetSelector As System.String</pre>	
C#	
<pre>[System.ComponentModel.DefaultValue()] [System.ComponentModel.Description("Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once.")] [System.ComponentModel.Category("Behavior")] public System.string TargetSelector {get; set;}</pre>	

## Remarks

When you using this property the extender control will be not registered via ScriptManager. Note, this property takes priority over TargetControlID property.

### ClearItems Method

C1.Web.Wijmo.Extenders.Base.Collections Namespace > C1ObservableItemCollection<TOwner,TItem>  
Class : ClearItems Method

Removes all elements from the collection.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub ClearItems()	
C#	
protected override void ClearItems()	

## See Also

### Reference

C1ObservableItemCollection<TOwner,TItem> Class

C1ObservableItemCollection<TOwner,TItem> Members

## InsertItem Method

C1.Web.Wijmo.Extenders.Base.Collections Namespace > C1ObservableItemCollection<TOwner,TItem>

Class : InsertItem Method

The zero-based index at which item should be inserted.

The object to insert.

Inserts an element into the collection at the specified index.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub InsertItem( _ ByVal <i>index</i> As System.Integer, _ ByVal <i>item</i> As TItem _ )	
C#	
protected override void InsertItem( System.int <i>index</i> , TItem <i>item</i> )	

### Parameters

*index*

The zero-based index at which item should be inserted.

*item*

The object to insert.

## See Also

## RemoveItem Method

C1.Web.Wijmo.Extenders.Base.Collections Namespace > C1ObservableItemCollection<TOwner,TItem>

Class : RemoveItem Method

The zero-based index of the element to remove.

Removes the element at the specified index of the collection.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub RemoveItem( _ ByVal <i>index</i> As System.Integer _ )	
C#	
protected override void RemoveItem( System.int <i>index</i> )	

### Parameters

*index*

The zero-based index of the element to remove.

## See Also

### Reference

## SetItem Method

C1.Web.Wijmo.Extenders.Base.Collections Namespace > C1ObservableItemCollection<TOwner,TItem>

Class : SetItem Method

The zero-based index of the element to replace.

The new value for the element at the specified index.

Replaces the element at the specified index.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub SetItem(_
 ByVal index As System.Integer, _
 ByVal item As TItem _
)
```

C#

```
protected override void SetItem(
 System.int index,
 TItem item
)
```

## Parameters

*index*

The zero-based index of the element to replace.

*item*

The new value for the element at the specified index.

 IC1Serializable Members  
 Overload List

## LoadLayout(Stream,LayoutType) Method

C1.Web.Wijmo.Extenders.Base.Interfaces Namespace > IC1Serializable Interface > LoadLayout Method :  
 LoadLayout(Stream,LayoutType) Method

The stream where the values of the layout properties will be loaded.

The layout types to load.

Loads the control layout properties with specified types from the stream.

## Syntax

Visual Basic (Declaration)

```
Overloads Sub LoadLayout(_
 ByVal stream As System.IO.Stream, _
 ByVal layoutTypes As LayoutType _
)
```

C#

```
void LoadLayout(
 System.IO.Stream stream,
 LayoutType layoutTypes
)
```

## Parameters

*stream*

The stream where the values of the layout properties will be loaded.

*layoutTypes*

The layout types to load.

## See Also

## Reference

C1.Web.Wijmo.Extenders.C1Accordion Namespace : C1AccordionExtender Class

The following tables list the members exposed by C1AccordionExtender.

### Public Constructors

	Name	Description
	C1AccordionExtender Constructor	Initializes a new instance of the C1AccordionExtender class.

Top

### Public Properties

	Name	Description
	Animated	Determines the animation easing effect; set this option to false in order to disable animation. Additional options that are available for the animation function include: expand - value of true indicates that content element must be expanded. horizontal - value of true indicates that expander is horizontally orientated (when expandDirection is left or right). content - jQuery object that contains

		content element to be expanded or collapsed.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Event	Determines the event that triggers the accordion.
	ExpandDirection	Determines the content expand direction. Available values are top, right, bottom, and left.
	Header	Selector for the header element. By using this option you can put header/content elements inside LI tags or into any other more complex html markup.

	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeSelectedIndexChanged	Occurs before an active accordion pane changes. The event is cancelable.
	OnClientSelectedIndexChanged	Occurs when an active accordion pane changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	RequireOpenedPane	Determines whether clicking the header will close the currently opened pane (leaving all the accordion's panes closed).
	SelectedIndex	Gets or sets the index of the currently expanded accordion pane.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)

	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
-----------------------------------------------------------------------------------	-----------------	--------------------------------------------------------------------------------------------------------------------------------------

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Accordion Namespace > C1AccordionExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

## Render Method

C1.Web.Wijmo.Extenders.C1Accordion Namespace > C1AccordionExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub Render(_
 ByVal writer As System.Web.UI.HtmlTextWriter _
)
```

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

## Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Public Properties

	Name	Description
	Animated	Determines the animation easing effect; set this option to false in order to disable animation.

		Additional options that are available for the animation function include: expand - value of true indicates that content element must be expanded. horizontal - value of true indicates that expander is horizontally orientated (when expandDirection is left or right). content - jQuery object that contains content element to be expanded or collapsed.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Event	Determines the event that triggers the accordion.

	ExpandDirection	Determines the content expand direction. Available values are top, right, bottom, and left.
	Header	Selector for the header element. By using this option you can put header/content elements inside LI tags or into any other more complex html markup.
	ID	(Inherited from System.Web.UI.Control)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforeSelectedIndexChanged	Occurs before an active accordion pane changes. The event is cancelable.
	OnClientSelectedIndexChanged	Occurs when an active accordion pane changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	RequireOpenedPane	Determines whether clicking the header will close the currently opened pane (leaving all the accordion's panes closed).
	SelectedIndex	Gets or sets the index of the currently expanded accordion pane.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate

		extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)

	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Enumerations

### ExpandDirection

C1.Web.Wijmo.Extenders.C1Accordion Namespace : ExpandDirection Enumeration

Use the members of this enumeration to set the value of the ExpandDirection property in the C1Accordion class. This enumeration specifies different expand directions (top, right, bottom, and left) for the C1Accordion control.

### Syntax

Visual Basic (Declaration)	
<pre>Public Enum ExpandDirection     Inherits System.Enum</pre>	
C#	
<pre>public enum ExpandDirection : System.Enum</pre>	

### Members

Member	Description
<b>Bottom</b>	Bottom.
<b>Left</b>	Left.
<b>Right</b>	Right.
<b>Top</b>	Top.

### Public Constructors

	Name	Description
	C1AppViewExtender Constructor	

[Top](#)

### Public Properties

	Name	Description
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In

		order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	LoadSettings	Additional Ajax loading options to consider when loading pages.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientPageBeforeChange	Triggered before changing page.
	OnClientPageBeforeLoad	Triggered before loading page.
	OnClientPageChange	Triggered when appview change a page succeeded.
	OnClientPageChangeFailed	Triggered when appview change page failed.
	OnClientPageLoad	Triggered when appview load a page succeeded.
	OnClientPageLoadFailed	Triggered when appview load page failed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)

	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	UniqueID	(Inherited from System.Web.UI.Control)
	UrlParamName	Defines the name of url parameter for appview.
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited

		from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)

	IsTrackingViewState	(Inherited from System.Web.UI.Control)
	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)
	WidgetName	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

Top

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)

	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)

	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	HasEvents	(Inherited from System.Web.UI.Control)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)

	Render	Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

C1.Web.Wijmo.Extenders.C1Calendar Namespace : C1CalendarExtender Class

The following tables list the members exposed by C1CalendarExtender.

### Public Constructors

	Name	Description
	C1CalendarExtender Constructor	Initializes a new instance of the C1CalendarExtender class.

[Top](#)

### Public Properties

	Name	Description
	AllowPreview	Determines whether the preview buttons are displayed.
	AllowQuickPick	Determines whether users can change the view to month/year/decade while clicking on the calendar title.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoHide	A Boolean property that determines whether to auto hide the calendar in pop-up mode when clicking outside of the calendar.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets culture ID.
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property.
	DayRows	Gets or sets the number of day rows.
	Direction	Determines the month slide direction.
	DisabledDates	Gets or sets the disable dates collection.
	DisplayDate	Gets or sets the display date for the first month view.
	Duration	Gets or sets the animation duration in milliseconds.
	Easing	Determines the animations easing effect.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)

	ID	(Inherited from System.Web.UI.Control)
	MaxDate	Determines the maximum date to display.
	MinDate	Determines the minimum date to display.
	MonthCols	Gets or sets the number of calendar months in horizontal direction.
	MonthRows	Gets or sets the number of calendar months in vertical direction.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NavButtons	Determines the display type of navigation buttons.
	NextPreviewTooltip	Gets or sets the "next preview" button's ToolTip.
	NextTooltip	Gets or sets the text for the 'next' button's ToolTip.
	OnClientAfterSelect	Occurs after a date is selected.
	OnClientAfterSlide	Occurs after the month view slides.
	OnClientBeforeSelect	Occurs before a date is selected.
	OnClientBeforeSlide	Occurs before the month view slides.
	OnClientCustomizeDate	A callback function used for customizing the content, style and attributes of a day cell.
	OnClientSelectedDatesChanged	Occurs when the selected dates collection changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	PopupMode	A Boolean property that determines whether the

		c1calendarwijcalendar widget is a pop-up calendar.
	PrevPreviewTooltip	Gets or sets the "previous preview" button's ToolTip.
	PrevTooltip	Gets or sets the text for the 'previous' button's ToolTip.
	QuickNavStep	Determines the inc/dec steps when clicking the quick navigation button.
	QuickNextTooltip	Gets or sets the "quick next" button's ToolTip.
	QuickPrevTooltip	Gets or sets the "quick previous" button's ToolTip.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SelectedDate	Gets or sets the latest selected date.
	SelectedDates	Gets or sets the selected dates collection.
	SelectionMode	Gets or sets the date selection mode on the calendar control that specifies whether the user can select a single day, a week, or an entire month.
	ShowDayPadding	Determines whether to add zeroes to days with only one digit.
	ShowOtherMonthDays	Determines whether to display the days of the next and/or previous month.
	ShowTitle	A Boolean property that determines whether to display calendar title.
	ShowWeekDays	A Boolean property that determines whether to display week days.
	ShowWeekNumbers	Determines whether to display week numbers.

	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TitleFormat	Gets or sets the format for the title text.
	ToolTipFormat	Gets or sets the format for the ToolTip.

	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WeekDayFormat	Gets or sets the format for the week day.
	WeekRule	Defines different rules for determining the first week of the year.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Calendar Namespace > C1CalendarExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

C1CalendarExtender Class

## Render Method

C1.Web.Wijmo.Extenders.C1Calendar Namespace > C1CalendarExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub Render( _     ByVal writer As System.Web.UI.HtmlTextWriter _ )</pre>	
C#	

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

C1.Web.Wijmo.Extenders.C1Calendar Namespace : C1CalendarExtender Class

For a list of all members of this type, see C1CalendarExtender members.

## Public Properties

	Name	Description
	AllowPreview	Determines whether the preview buttons are displayed.
	AllowQuickPick	Determines whether users can change the view to month/year/decade while clicking on the calendar title.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoHide	A Boolean property that determines whether to auto hide the calendar in pop-up mode when clicking outside of the calendar.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets culture ID.
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property.
	DayRows	Gets or sets the number of day rows.
	Direction	Determines the month slide direction.
	DisabledDates	Gets or sets the disable dates collection.
	DisplayDate	Gets or sets the display date for the first month view.
	Duration	Gets or sets the animation duration in milliseconds.
	Easing	Determines the animations easing effect.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)

	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	MaxDate	Determines the maximum date to display.
	MinDate	Determines the minimum date to display.
	MonthCols	Gets or sets the number of calendar months in horizontal direction.
	MonthRows	Gets or sets the number of calendar months in vertical direction.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NavButtons	Determines the display type of navigation buttons.
	NextPreviewTooltip	Gets or sets the "next preview" button's ToolTip.
	NextTooltip	Gets or sets the text for the 'next' button's ToolTip.
	OnClientAfterSelect	Occurs after a date is selected.
	OnClientAfterSlide	Occurs after the month view slides.
	OnClientBeforeSelect	Occurs before a date is selected.
	OnClientBeforeSlide	Occurs before the month view slides.
	OnClientCustomizeDate	A callback function used for customizing the content, style and attributes of a day cell.
	OnClientSelectedDatesChanged	Occurs when the selected dates collection changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)

	PopupMode	A Boolean property that determines whether the c1calendarwijcalendar widget is a pop-up calendar.
	PrevPreviewTooltip	Gets or sets the "previous preview" button's ToolTip.
	PrevTooltip	Gets or sets the text for the 'previous' button's ToolTip.
	QuickNavStep	Determines the inc/dec steps when clicking the quick navigation button.
	QuickNextTooltip	Gets or sets the "quick next" button's ToolTip.
	QuickPrevTooltip	Gets or sets the "quick previous" button's ToolTip.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SelectedDate	Gets or sets the latest selected date.
	SelectedDates	Gets or sets the selected dates collection.
	SelectionMode	Gets or sets the date selection mode on the calendar control that specifies whether the user can select a single day, a week, or an entire month.
	ShowDayPadding	Determines whether to add zeroes to days with only one digit.
	ShowOtherMonthDays	Determines whether to display the days of the next and/or previous month.
	ShowTitle	A Boolean property that determines whether to display calendar title.
	ShowWeekDays	A Boolean property that determines whether to display week days.
	ShowWeekNumbers	Determines whether to display week numbers.

	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TitleFormat	Gets or sets the format for the title text.
	ToolTipFormat	Gets or sets the format for the ToolTip.

	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WeekDayFormat	Gets or sets the format for the week day.
	WeekRule	Defines different rules for determining the first week of the year.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## AllowQuickPick Property

C1.Web.Wijmo.Extenders.C1Calendar Namespace > C1CalendarExtender Class : AllowQuickPick Property

Determines whether users can change the view to month/year/decade while clicking on the calendar title.

## Syntax

Visual Basic (Declaration)

```
<C1CategoryAttribute("Navigation")>
<WidgetOptionAttribute()>
<C1DescriptionAttribute("Gets or sets a value that determines whether can
change the view to month/year/decade while clicking on the calendar title.")>
<System.ComponentModel.DefaultValueAttribute()>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
Public Property AllowQuickPick As System.Boolean
```

C#

```
[C1Category("Navigation")]
[WidgetOption()]
[C1Description("Gets or sets a value that determines whether can change the
view to month/year/decade while clicking on the calendar title.")]
```

```
[System.ComponentModel.DefaultValue()]
[System.ComponentModel.NotifyParentProperty(true)]
public System.bool AllowQuickPick {get; set;}
```

## Public Constructors

	Name	Description
	C1CarouselExtender Constructor	

Top

## Public Properties

	Name	Description
	Animation	A value determines the settings of the animation effect to be used when the wijcarousel is scrolling.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoPlay	When AutoPlay is true the pictures of carousel will be played automatically.
	ButtonPosition	Gets or sets the position of navigation buttons.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Control	Determines whether the custom control should be shown.
	ControlPosition	Sets the position of the controls in the carousel to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery UI position's position:{my:'top left',at:'right bottom',offset:}.
	Controls	(Inherited from System.Web.UI.Control)

	Display	Determines how many images should be shown in the view area.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	Interval	Determines the time span in milliseconds between two pictures being shown in AutoPlay mode.
	Loop	Allows carousel to loop back to the beginning.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NextClass	Determines the custom class of the Next button.
	OnClientAfterScroll	The name of the function which will be called after scrolling to another image.
	OnClientBeforeScroll	The name of the function which will be called before scrolling to another image.
	OnClientItemClick	The name of the function which will be called when the image is clicked.
	OnClientLoadCallback	The name of the function which will be called after the DOM element is created.
	Orientation	Controls the carousel's orientation. All images are

		vertical regardless of the orientation of the carousel.
	Page	(Inherited from System.Web.UI.Control)
	PagerPosition	Sets the carousel pager's position to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery UI position's position:{my:'top left',at:'right bottom',offset:}.
	PagerType	Determines what type of pager to use in the carousel. The ShowPager property must be set to True for the Pager to be displayed.
	Parent	(Inherited from System.Web.UI.Control)
	PrevClass	Determines the custom class of the Previous button.
	Preview	Determines if a preview of the next item should be displayed in the carousel.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowCaption	Determines whether the caption of items should be shown.
	ShowControls	Determines whether the custom control should be shown.
	ShowControlsOnHover	Determines whether the controls should be shown after created or hover on the DOM element.
	ShowPager	Determines whether the pager should be shown.
	ShowTimer	Determines if the carousel timer should be shown.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)

	SliderOrientation	Determines the orientation of the slider pager.
	Start	Determines the custom start position of the image list in the carousel.
	Step	Determines how many images will be scrolled when you click the Next/Previous button.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	Thumbnails	Gets or sets the list of pager thumbnail images pager when The PagerType is set to Thumbnails.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

C1CarouselExtender Members

## Properties

C1.Web.Wijmo.Extenders.C1Carousel Namespace : C1CarouselExtender Class

For a list of all members of this type, see C1CarouselExtender members.

## Public Properties

	Name	Description
	Animation	A value determines the settings of the animation effect to be used when the wijcarousel is scrolling.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoPlay	When AutoPlay is true the pictures of carousel will be

		played automatically.
	ButtonPosition	Gets or sets the position of navigation buttons.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Control	Determines whether the custom control should be shown.
	ControlPosition	Sets the position of the controls in the carousel to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery UI position's position:{my:'top left',at:'right bottom',offset:}.
	Controls	(Inherited from System.Web.UI.Control)
	Display	Determines how many images should be shown in the view area.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)

	EnableViewState	(Inherited from System.Web.UI.Control)
	ID	(Inherited from System.Web.UI.Control)
	Interval	Determines the time span in milliseconds between two pictures being shown in AutoPlay mode.
	Loop	Allows carousel to loop back to the beginning.
	NamingContainer	(Inherited from System.Web.UI.Control)
	NextClass	Determines the custom class of the Next button.
	OnClientAfterScroll	The name of the function which will be called after scrolling to another image.
	OnClientBeforeScroll	The name of the function which will be called before scrolling to another image.
	OnClientItemClick	The name of the function which will be called when the image is clicked.
	OnClientLoadCallback	The name of the function which will be called after the DOM element is created.
	Orientation	Controls the carousel's orientation. All images are vertical regardless of the orientation of the carousel.
	Page	(Inherited from System.Web.UI.Control)
	PagerPosition	Sets the carousel pager's position to the 'relativeTo', 'offsetX', and 'offsetY' properties. For example, here is the jQuery UI position's position:{my:'top left',at:'right bottom',offset:}.
	PagerType	Determines what type of pager to use in the carousel. The ShowPager property must be set to True for the

		Pager to be displayed.
	Parent	(Inherited from System.Web.UI.Control)
	PrevClass	Determines the custom class of the Previous button.
	Preview	Determines if a preview of the next item should be displayed in the carousel.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	ShowCaption	Determines whether the caption of items should be shown.
	ShowControls	Determines whether the custom control should be shown.
	ShowControlsOnHover	Determines whether the controls should be shown after created or hover on the DOM element.
	ShowPager	Determines whether the pager should be shown.
	ShowTimer	Determines if the carousel timer should be shown.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	SliderOrientation	Determines the orientation of the slider pager.
	Start	Determines the custom start position of the image list in the carousel.
	Step	Determines how many images will be scrolled when you click the Next/Previous button.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)

	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	Thumbnails	Gets or sets the list of pager thumbnail images pager when The PagerType is set to Thumbnails.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

### Classes

	Class	Description
	BarChartSeries	Represents the BarChartSeries class which contains all of the settings for the chart series.
	BaseChartAxisList<T>	Represents the BaseChartAxisList class which contains all of the settings for the series data.
	BubbleChartLabel	Represents the BubbleChartLabel class which contains all of the settings for the BubbleChart Labels
	BubbleChartMarker	Represents the BubbleChartMarker class which contains all of the settings for the BubbleChartSeries
	BubbleChartSeries	Represents the BubbleChartSeries class which contains all of the settings for the bubblechart series.
	BubbleChartSeriesData	Represents the BubbleChartSeriesData class which contains all of the settings for the BubbleChartSeries data option.
	BubbleChartSymbol	Represents the BubbleChartSymbol class which contains all of the settings for the BubbleChartMarker.
	C1BarChartExtender	Extender for bar chart widget.

	C1BubbleChartExtender	Extender for bar chart widget.
	C1CandlestickChartExtender	Extender for bar chart widget.
	C1ChartCoreExtender<Tseries,TAnimation>	Extender for the chart widget.
	C1CompositeChartExtender	Extender for Composite chart widget.
	C1LineChartExtender	Extender for line chart widget.
	C1PieChartExtender	Extender for pie chart widget.
	C1ScatterChartExtender	Extender for scatter chart widget.
	CandlestickChartSeries	Represents the CandlestickChartSeries class which contains all of the settings for the chart series.
	CandlestickChartSeriesData	Represents the CandlestickChartSeriesData class which contains all settings for the candlestickchart series.
	CandlestickChartStyle	Represents the CandlestickChartStyle class which contains all of the settings for the candlestickchart style.
	ChartAnimation	Represents the ChartAnimation class which contains all settings for the animation. Represents the ChartAnimation class which contains all settings for the animation.
	ChartAxes	Represents the objects for the x and y axes.
	ChartAxis	Represents the class for the Axis object. The axes appears on the plot area of the chart.
	ChartAxisGrid	Represents the ChartAxisGrid class which

		contains all of the settings for the axis grid.
	ChartAxisLabel	Represents the ChartAxisLabel class which contains all of the settings for the axis label.
	ChartAxisTick	Represents the ChartAxisTick class which contains all settings for the axis tick.
	ChartHint	Represents the ChartHint class which contains all of the settings for the chart hint.
	ChartHole	Represents the ChartHole class. ChartHole is used as placeholders for data points that indicate data is normally present but not in this case.
	ChartIndicator	Represents the ChartIndicator class which contains all settings for the chart indicator.
	ChartLegend	Provides access to the customization of the legend for the chart.
	ChartLegendSize	Represents the ChartLegendSize class which contains all settings for the legend size.
	ChartSeries	Represents the ChartSeries class which contains all of the settings for the chart series.
	ChartSeriesData	Represents the ChartSeriesData class which contains all of the settings for the chart data series.
	ChartStyle	Represents the ChartStyle class which contains all of the settings for the chart style.
	ChartStyleFill	Represents the ChartStyleFill class which contains all of the settings for Fill property of

		chart style.
	ChartTextMargin	Represents the ChartTextMargin class which contains all of the settings for the text margin.
	ChartTitle	Represents the ChartTitle class which contains all settings for the chart title.
	ChartXAxisList	Represents the ChartXAxisList class which contains all of the settings for the series list shown on x axis.
	ChartXData	Represents the ChartXData class which contains all of the settings for the x-axis series data.
	ChartY1AxisList	Represents the ChartY1AxisList class which contains all of the settings for the series list shown on some axis.
	ChartY1Data	
	ChartYAxisList	Represents the ChartYAxisList class which contains all of the settings for the series list shown on y axis.
	ChartYData	Represents the ChartYData class which contains all of the settings for the y-axis series data.
	ColorMiddle	Represents the ColorMiddle class which contains all settings for color middle.
	CompositeChartSeries	Represents the CompositeChartSeries class which contains all settings for the composite chart chart series.

	CompositeChartYAxis	
	CompositeChartYAxisHeight	
	CompositeSharedPieSeries	Represents the CompositeSharedPieSeries class which just contains the settings for the pie chart chart series. It is designed for setting each pie chart series in compositechart "SharedPieChartSeries" property.
	LineChartAnimation	Represents the LineChartAnimation class which contains all of the settings for the animation.
	LineChartMarker	Represents the LineChartMarker class which contains all of the settings for the line chart marker.
	LineChartMarkerSymbol	Represents the LineChartMarkerSymbol class which contains all of the settings for the symbol of marker.
	LineChartSeries	Represents the LineChartSeries class which contains all of the settings for the chart series.
	PieChartAnimation	Represents the PieChartAnimation class which contains all of the settings for the animation.
	PieChartSeries	Represents the PieChartSeries class which contains all of the settings for the chart series.
	ScatterChartSeries	Represents the ScatterChartSeires class which contains all settings for the chart series.
	TrendlineChartSeries	Represents the TrendlineSeries class which contains all of the settings for the trendline series.

	ValueLabel	Represents the ValueLabel class which contains all settings for the value label.
-----------------------------------------------------------------------------------	------------	----------------------------------------------------------------------------------

## Interfaces

	Interface	Description
	IChartXAxisList	Represents the IChartXAxisList for handling x-axis series data.
	IChartYAxisList	Represents the IChartYAxisList for handling y-axis series data.

## Enumerations

	Enumeration	Description
	BubbleChartMarkerType	Represents the BubbleChartMarkerType enum which contains all of the types for the BubbleChartMarker type
	CandlestickChartType	Use the members of this enumeration to set the value of the C1CandlestickChart.Type property.
	ChartAxisAlignment	Use the members of this enumeration to set the value of the ChartAxis.Alignment property.
	ChartAxisAnnoMethod	Use the members of this enumeration to set the value of the ChartAxis.AnnoMethod property.
	ChartAxisTickPosition	Use the members of this enumeration to set the value of the ChartAxisTick.Position property.
	ChartCompass	Use the members of this enumeration to set the value of the ChartAxis.Compass property.
	ChartEasing	Use the members of this enumeration to set the value of the ChartAnimation.Easing property.
	ChartLabelCompass	Use the members of this enumeration to set the value of the ChartLabel.Compass property.

	ChartOrientation	Use the members of this enumeration to set the value of the ChartLegend.Orientation property.
	ChartSeriesDisplay	Use the members of this enumeration to set the value of the ChartSeries.Display property.
	ChartSeriesType	The ChartSeriesType represents the type of the series for the chart.
	ChartStyleFillType	Use the members of this enumeration to set the value of the ChartStyleFill.Type property.
	LabelPosition	Use the members of this enumeration to set the value of the BubbleChartLabel.Position property.
	LineChartDirection	Use the members of this enumeration to set the value of the LineChart.Direction property.
	LineChartFitType	Use the members of this enumeration to set the value of the LineChart.FitType property.
	LineChartType	Use the members of this enumeration to set the value of the LineChart.Type property.
	MarkerType	Use the members of this enumeration to set the value of the ChartMarker.Type property.
	PieChartDirection	Use the members of this enumeration to set the value of the C1PieChart.Direction property.
	SizingMethod	Decides the bubble size calculate by diameter or area.
	TrendlineFitType	Represents the type of trendline series.

## Add(Double) Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > BaseChartAxisList<T> Class > Add Method : Add(Double)  
Method

The double data point value.

Add a double data point value to the series.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub Add( _     ByVal <i>value</i> As System.Double _ )</pre>	
C#	
<pre>public void Add(     System.double <i>value</i> )</pre>	

## Parameters

*value*

The double data point value.

## See Also

## Reference

BaseChartAxisList<T> Class

Overload List

## Add(Nullable<Double>) Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > BaseChartAxisList<T> Class > Add Method :  
Add(Nullable<Double>) Method

The double data point value.

Add a double data point value to the series.

## Syntax

Visual Basic (Declaration)	
<pre>Public Overloads Sub Add( _     ByVal <i>value</i> As System.Nullable(Of Double) _ )</pre>	
C#	
<pre>public void Add(     System.Nullable&lt;double&gt; <i>value</i> )</pre>	

## Parameters

*value*

The double data point value.

C1.Web.Wijmo.Extenders.C1Chart Namespace : C1BarChartExtender Class

The following tables list the members exposed by C1BarChartExtender.

### Public Constructors

	Name	Description
	C1BarChartExtender Constructor	Initializes a new instance of the C1BarChartExtender class.

Top

### Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically

		when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ChartLabelFormatString	A value that indicates the format string of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	ChartLabelStyle	A value that indicates style of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	ClusterOverlap	A value that indicates the percentage of bar elements in the same cluster overlap.
	ClusterRadius	A value that indicates the corner-radius for the bar.
	ClusterSpacing	A value that indicates the spacing between the adjacent bars.
	ClusterWidth	A value that indicates the percentage of the plot area that each

		bar cluster occupies.
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 Horizontal	A value that determines whether the bar chart renders horizontal or vertical.
 ID	(Inherited from System.Web.UI.Control)
 Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 Is100Percent	A value that determines whether to show a stacked and percentage chart.
 Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

 MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 NamingContainer	(Inherited from System.Web.UI.Control)
 OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

 SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 SeriesTransition	A value that indicates whether to show the effect and duration of the animation when reloading the data.
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 Stacked	A value that determines whether to show a stacked chart.
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 TemplateControl	(Inherited from System.Web.UI.Control)
 TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

		rtSeries,ChartAnimation>)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Protected Properties

 ClearChildViewState	(Inherited from System.Web.UI.Control)
 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
 ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 CreateControlCollection	(Inherited from System.Web.UI.Control)
 DataBindChildren	(Inherited from System.Web.UI.Control)
 EnsureChildControls	(Inherited from System.Web.UI.Control)
 EnsureID	(Inherited from System.Web.UI.Control)
 GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetDesignModeState	(Inherited from System.Web.UI.Control)
 GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🍷💎	GetSeriesData	Overridden. Gets the series data of the specified series.
🍷💎	HasEvents	(Inherited from System.Web.UI.Control)
🍷💎	IsDateTimeSeries	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
🍷💎	IsLiteralContent	(Inherited from System.Web.UI.Control)
🍷💎	LoadViewState	(Inherited from System.Web.UI.Control)
🍷💎	NeedConvertOADate	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
🍷💎	OnBubbleEvent	(Inherited from System.Web.UI.Control)
🍷💎	OnDataBinding	(Inherited from System.Web.UI.Control)
🍷💎	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🍷💎	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
🍷💎	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
🍷💎	Render	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
🍷💎	ResolveAdapter	(Inherited from System.Web.UI.Control)

	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## C1BarChartExtender Constructor

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1BarChartExtender Class : C1BarChartExtender Constructor

Initializes a new instance of the C1BarChartExtender class.

## Syntax

Visual Basic (Declaration)	
----------------------------	--

Public Function New()

C#

public C1BarChartExtender()

## Methods

C1.Web.Wijmo.Extenders.C1Chart Namespace : C1BarChartExtender Class

For a list of all members of this type, see C1BarChartExtender members.

## Public Methods

	Name	Description
≡	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
≡	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
≡	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
≡	Focus	(Inherited from System.Web.UI.Control)
≡	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
≡	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)

	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

[Top](#)

## Protected Methods

Name	Description
 AddParsedSubObject	(Inherited from System.Web.UI.Control)
 BuildProfileTree	(Inherited from System.Web.UI.Control)
 CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClearCachedClientID	(Inherited from System.Web.UI.Control)
 ClearChildControlState	(Inherited from System.Web.UI.Control)
 ClearChildState	(Inherited from System.Web.UI.Control)
 ClearChildViewState	(Inherited from System.Web.UI.Control)
 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)

 ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 CreateControlCollection	(Inherited from System.Web.UI.Control)
 DataBindChildren	(Inherited from System.Web.UI.Control)
 EnsureChildControls	(Inherited from System.Web.UI.Control)
 EnsureID	(Inherited from System.Web.UI.Control)
 GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetDesignModeState	(Inherited from System.Web.UI.Control)
 GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetSeriesData	Overridden. Gets the series data of the specified series.
 HasEvents	(Inherited from System.Web.UI.Control)

 <b>IsDateTimeSeries</b>	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 <b>IsLiteralContent</b>	(Inherited from System.Web.UI.Control)
 <b>LoadViewState</b>	(Inherited from System.Web.UI.Control)
 <b>NeedConvertOADate</b>	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 <b>OnBubbleEvent</b>	(Inherited from System.Web.UI.Control)
 <b>OnDataBinding</b>	(Inherited from System.Web.UI.Control)
 <b>OnInit</b>	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 <b>OnPreRender</b>	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
 <b>RaiseBubbleEvent</b>	(Inherited from System.Web.UI.Control)
 <b>Render</b>	Overridden. Sends server control content to a provided <b>System.Web.UI.HtmlTextWriter</b> object, which writes the content to be rendered in the browser window.
 <b>ResolveAdapter</b>	(Inherited from System.Web.UI.Control)
 <b>SaveViewState</b>	(Inherited from System.Web.UI.Control)
 <b>SetDesignModeState</b>	(Inherited from System.Web.UI.Control)
 <b>TrackViewState</b>	(Inherited from System.Web.UI.Control)

## GetSeriesData Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1BarChartExtender Class : GetSeriesData Method

The specified series.

Gets the series data of the specified series.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Function GetSeriesData( _ ByVal <i>series</i> As BarChartSeries _ ) As ChartSeriesData	
C#	
protected override ChartSeriesData GetSeriesData( BarChartSeries <i>series</i> )	

### Parameters

*series*

The specified series.

### Return Value

Returns the series data which retrieved from the specified series.

## See Also

### Reference

C1BarChartExtender Class

C1BarChartExtender Members

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1BarChartExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## See Also

### Reference

C1BarChartExtender Class  
C1BarChartExtender Members

## Render Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1BarChartExtender Class : Render Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

Sends server control content to a provided **System.Web.UI.HtmlTextWriter** object, which writes the content to be rendered in the browser window.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub Render( _ ByVal writer As System.Web.UI.HtmlTextWriter _ )	

C#

```
protected override void Render(
 System.Web.UI.HtmlTextWriter writer
)
```

### Parameters

*writer*

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

## Properties

C1.Web.Wijmo.Extenders.C1Chart Namespace : C1BarChartExtender Class

For a list of all members of this type, see C1BarChartExtender members.

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ChartLabelFormatString	A value that indicates the format string of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	ChartLabelStyle	A value that indicates style of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	ClusterOverlap	A value that indicates the percentage of bar elements in the same cluster overlap.
	ClusterRadius	A value that indicates the corner-radius for the bar.
	ClusterSpacing	A value that indicates the spacing between the adjacent bars.
	ClusterWidth	A value that indicates the percentage of the plot area that each bar cluster occupies.
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

		rtSeries,ChartAnimation>)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

		rtSeries,ChartAnimation>)
	Horizontal	A value that determines whether the bar chart renders horizontal or vertical.
	ID	(Inherited from System.Web.UI.Control)
	Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Is100Percent	A value that determines whether to show a stacked and percentage chart.
	Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

		rtSeries,ChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)

	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	SeriesTransition	A value that indicates whether to show the effect and duration of the animation when reloading the data.

 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 Stacked	A value that determines whether to show a stacked chart.
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 TemplateControl	(Inherited from System.Web.UI.Control)
 TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
 UniqueID	(Inherited from System.Web.UI.Control)
 UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BarChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

Top

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)

	C1BubbleChartExtender Constructor	

Top

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)

 CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ChartLabel	Gets or sets the style of the bubble's label.
 ClientID	(Inherited from System.Web.UI.Control)
 ClientIDMode	(Inherited from System.Web.UI.Control)
 Controls	(Inherited from System.Web.UI.Control)
 Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)

 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleC hartSeries,ChartAnimation>)
 Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleC hartSeries,ChartAnimation>)
 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleC hartSeries,ChartAnimation>)
 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleC hartSeries,ChartAnimation>)
 ID	(Inherited from System.Web.UI.Control)
 Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleC hartSeries,ChartAnimation>)
 Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleC hartSeries,ChartAnimation>)
 MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleC hartSeries,ChartAnimation>)

	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	MaximumSize	The maximum bubble size represents the percentage of the diameter (or area) of the plot area.
	MinimumSize	The minimum bubble size represents the percentage of the diameter (or area) of the plot area
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)

	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)

 SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SizingMethod	A value that indicates the bubble size calculate by diameter or area.
 SkinID	(Inherited from System.Web.UI.Control)
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMethod	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetProperty<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetProperty<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

[Top](#)

## Protected Methods

Name	Description
 AddParsedSubObject	(Inherited from System.Web.UI.Control)
 BuildProfileTree	(Inherited from System.Web.UI.Control)
 CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)

	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetSeriesData	Overridden. Gets the series data of the specified series.
	HasEvents	(Inherited from System.Web.UI.Control)
	IsDateTimeSeries	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	NeedConvertOADate	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.

	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender< BubbleChartSeries,ChartAnimation>)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

[Top](#)

## Public Events

	Name	Description
	DataBinding	(Inherited from System.Web.UI.Control)
	Disposed	(Inherited from System.Web.UI.Control)
	Init	(Inherited from System.Web.UI.Control)
	Load	(Inherited from System.Web.UI.Control)
	PreRender	(Inherited from System.Web.UI.Control)
	Unload	(Inherited from System.Web.UI.Control)

## GetSeriesData Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1BubbleChartExtender Class : GetSeriesData Method

The specified series.

Gets the series data of the specified series.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Function GetSeriesData(_
 ByVal series As BubbleChartSeries _
) As ChartSeriesData
```

C#

```
protected override ChartSeriesData GetSeriesData(
 BubbleChartSeries series
)
```

### Parameters

*series*

The specified series.

### Return Value

Returns the series data which retrieved from the specified series.

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1BubbleChartExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

## Public Properties

Name	Description
 Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ChartLabel	Gets or sets the style of the bubble's label.
 ClientID	(Inherited from System.Web.UI.Control)
 ClientIDMode	(Inherited from System.Web.UI.Control)
 Controls	(Inherited from System.Web.UI.Control)
 Culture	Gets or sets the culture information for the input control. (Inherited from

		<code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;)</code>
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;)</code> )
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;)</code> )
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the <code>WijmoHttpHandler</code> in <code>web.config</code> . (Inherited from <code>C1.Web.Wijmo.Extenders.WidgetExtenderControlBase</code> )
	EnableTheming	(Inherited from <code>System.Web.UI.Control</code> )
	EnableViewState	(Inherited from <code>System.Web.UI.Control</code> )
	Footer	An object value that indicates the footer of the chart element. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;)</code> )
	Header	An object that value indicates the header of the chart element. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;)</code> )
	Height	A value that indicates the height of chart. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;)</code> )
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from

		<code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;</code> )
	ID	(Inherited from <code>System.Web.UI.Control</code> )
	Indicator	A value that provides information about the indicator. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;</code> )
	Legend	An object value indicates the legend of the chart element. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;</code> )
	MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;</code> )
	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;</code> )
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;</code> )
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;BubbleChartSeries,ChartAnimation&gt;</code> )
	MaximumSize	The maximum bubble size represents the percentage of the diameter (or area) of the plot area.

	MinimumSize	The minimum bubble size represents the percentage of the diameter (or area) of the plot area
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)

 OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 Page	(Inherited from System.Web.UI.Control)
 Parent	(Inherited from System.Web.UI.Control)
 RenderingCompatibility	(Inherited from System.Web.UI.Control)
 SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)

		hartSeries,ChartAnimation>)
	ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	Site	(Inherited from System.Web.UI.Control)
	SizingMethod	A value that indicates the bubble size calculate by diameter or area.
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<BubbleChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

C1.Web.Wijmo.Extenders.C1Chart Namespace : C1CandlestickChartExtender Class

The following tables list the members exposed by C1CandlestickChartExtender.

## Public Constructors

	Name	Description
	C1CandlestickChartExtender Constructor	Initializes a new instance of the C1BarChartExtender class.

[Top](#)

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)

	CandlestickChartSeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element.
	CandlestickChartSeriesStyles	An array collection that contains the style to be charted.
	CandlestickFormatter	A value that indicates the formater of the chart.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in

pts	web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)
 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 ID	(Inherited from System.Web.UI.Control)
 Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)

	MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)

 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 TemplateControl	(Inherited from System.Web.UI.Control)
 TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Type	A value that indicates the type of the chart.
 UniqueID	(Inherited from System.Web.UI.Control)
 UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	ClearChildViewState	(Inherited from System.Web.UI.Control)

🍷💜 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
🍷💜 ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
🍷💜 ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
🍷💜 CreateControlCollection	(Inherited from System.Web.UI.Control)
🍷💜 DataBindChildren	(Inherited from System.Web.UI.Control)
🍷💜 EnsureChildControls	(Inherited from System.Web.UI.Control)
🍷💜 EnsureID	(Inherited from System.Web.UI.Control)
🍷💜 GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🍷💜 GetDesignModeState	(Inherited from System.Web.UI.Control)
🍷💜 GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
🍷💜 GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

 GetSeriesData	Overridden. Gets the series data of the specified series.
 HasEvents	(Inherited from System.Web.UI.Control)
 IsDateTimeSeries	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 IsLiteralContent	(Inherited from System.Web.UI.Control)
 LoadViewState	(Inherited from System.Web.UI.Control)
 NeedConvertOADate	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 OnBubbleEvent	(Inherited from System.Web.UI.Control)
 OnDataBinding	(Inherited from System.Web.UI.Control)
 OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
 RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
 Render	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 ResolveAdapter	(Inherited from System.Web.UI.Control)
 SaveViewState	(Inherited from System.Web.UI.Control)

	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## C1CandlestickChartExtender Constructor

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1CandlestickChartExtender Class :  
C1CandlestickChartExtender Constructor

Initializes a new instance of the C1BarChartExtender class.

## Syntax

Visual Basic (Declaration)	
Public Function New()	

C#

```
public C1CandlestickChartExtender()
```

For a list of all members of this type, see C1CandlestickChartExtender members.

## Public Methods

	Name	Description
🔗	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
🔗	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
🔗	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
🔗	Focus	(Inherited from System.Web.UI.Control)
🔗	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)

	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)
	ShouldSerializeSeriesHoverStyles	Overridden.
	ShouldSerializeSeriesStyles	Overridden.

## GetSeriesData Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1CandlestickChartExtender Class : GetSeriesData Method

The specified series.

Gets the series data of the specified series.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Function GetSeriesData( _     ByVal series As CandlestickChartSeries _ ) As ChartSeriesData</pre>	
C#	
<pre>protected override ChartSeriesData GetSeriesData(     CandlestickChartSeries series )</pre>	

### Parameters

*series*

The specified series.

## Return Value

Returns the series data which retrieved from the specified series.

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1CandlestickChartExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Sub OnPreRender(_
 ByVal e As System.EventArgs _
)
```

C#

```
protected override void OnPreRender(
 System.EventArgs e
)
```

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

## Public Properties

Name	Description
 Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 CandlestickChartSeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element.
 CandlestickChartSeriesStyles	An array collection that contains the style to be charted.
 CandlestickFormatter	A value that indicates the formater of the chart.
 CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClientID	(Inherited from System.Web.UI.Control)
 ClientIDMode	(Inherited from System.Web.UI.Control)

 Controls	(Inherited from System.Web.UI.Control)
 Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)
 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)

		ckChartSeries,ChartAnimation>)
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	ID	(Inherited from System.Web.UI.Control)
	Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)

		ckChartSeries,ChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)

 OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Page	(Inherited from System.Web.UI.Control)
 Parent	(Inherited from System.Web.UI.Control)
 RenderingCompatibility	(Inherited from System.Web.UI.Control)
 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page

		elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	Type	A value that indicates the type of the chart.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMethod	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CandlestickChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element.
	Axis	A value that provides information about the axes.

	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ChartLabelFormatString	A value that indicates the format string of the chart labels.
	ChartLabelStyle	A value that indicates style of the chart labels.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control.
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property.
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)

	EnableViewState	(Inherited from System.Web.UI.Control)
	Footer	An object value that indicates the footer of the chart element.
	Header	An object that value indicates the header of the chart element.
	Height	A value that indicates the height of chart.
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip.
	ID	(Inherited from System.Web.UI.Control)
	Indicator	A value that provides information about the indicator.
	Legend	An object value indicates the legend of the chart element.
	MarginBottom	A value that indicates the bottom margin of the chart area.
	MarginLeft	A value that indicates the left margin of the chart area.
	MarginRight	A value that indicates the right margin of the chart area.
	MarginTop	A value that indicates the top margin of the chart area.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled.

	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled.
	OnClientClick	Occurs when the user clicks the chart element.
	OnClientMouseDown	Occurs when the user clicks a mouse button.
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element.
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element.
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element.
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element.
	OnClientPainted	Occurs after the canvas is painted.
	OnClientSeriesChanged	Occurs when the series changes.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element.
	SeriesList	An array collection that contains the data to be charted.
	SeriesStyles	An array collection that contains the style to be charted.

	Shadow	A value that indicates whether to show shadow for the chart.
	ShowChartLabels	A value that indicates whether to show default chart labels.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)

	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)

	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

	Name	Description
	AddParsedSubObject	(Inherited from System.Web.UI.Control)
	BuildProfileTree	(Inherited from System.Web.UI.Control)
	CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ClearCachedClientID	(Inherited from System.Web.UI.Control)
	ClearChildControlState	(Inherited from System.Web.UI.Control)
	ClearChildState	(Inherited from System.Web.UI.Control)
	ClearChildViewState	(Inherited from System.Web.UI.Control)
	ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
	ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime.
	ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond.
	CreateControlCollection	(Inherited from System.Web.UI.Control)

	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControls	(Inherited from System.Web.UI.Control)
	EnsureID	(Inherited from System.Web.UI.Control)
	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetDesignModeState	(Inherited from System.Web.UI.Control)
	GetScriptDescriptors	Overridden. When overridden in a derived class, registers the WidgetDescriptor objects for the control.
	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetSeriesData	Gets the series data of the specified series.
	HasEvents	(Inherited from System.Web.UI.Control)
	IsDateTimeSeries	
	IsLiteralContent	(Inherited from System.Web.UI.Control)
	LoadViewState	(Inherited from System.Web.UI.Control)
	NeedConvertOADate	
	OnBubbleEvent	(Inherited from System.Web.UI.Control)
	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Raises the

		<b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
💡	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
💡	Render	Overridden.
💡	ResolveAdapter	(Inherited from System.Web.UI.Control)
💡	SaveViewState	(Inherited from System.Web.UI.Control)
💡	SetDesignModeState	(Inherited from System.Web.UI.Control)
💡	TrackViewState	(Inherited from System.Web.UI.Control)

## GetSeriesData Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1ChartCoreExtender<Tseries,TAnimation> Class :

GetSeriesData Method

The specified series.

Gets the series data of the specified series.

## Syntax

Visual Basic (Declaration)	
Protected Overridable Function GetSeriesData( _ ByVal <i>series</i> As Tseries _ ) As ChartSeriesData	
C#	
protected virtual ChartSeriesData GetSeriesData( Tseries <i>series</i> )	

## Parameters

*series*

The specified series.

## Return Value

Returns the series data which retrieved from the specified series.

## See Also

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation.
	AppRelativeTemplateSourceDirector y	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element.

	Axis	A value that provides information about the axes.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ChartLabelFormatString	A value that indicates the format string of the chart labels.
	ChartLabelStyle	A value that indicates style of the chart labels.
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control.
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property.
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	Footer	An object value that indicates the footer of the chart element.
	Header	An object that value indicates the header of the chart element.
	Height	A value that indicates the height of chart.
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip.
	ID	(Inherited from System.Web.UI.Control)
	Indicator	A value that provides information about the indicator.
	Legend	An object value indicates the legend of the chart element.
	MarginBottom	A value that indicates the bottom margin of the chart area.
	MarginLeft	A value that indicates the left margin of the chart area.
	MarginRight	A value that indicates the right margin of the chart area.
	MarginTop	A value that indicates the top margin of the chart area.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can

		be cancelled.
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled.
	OnClientClick	Occurs when the user clicks the chart element.
	OnClientMouseDown	Occurs when the user clicks a mouse button.
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element.
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element.
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element.
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element.
	OnClientPainted	Occurs after the canvas is painted.
	OnClientSeriesChanged	Occurs when the series changes.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element.
	SeriesList	An array collection that contains the data to be charted.
	SeriesStyles	An array collection that contains the style to be

		charted.
	Shadow	A value that indicates whether to show shadow for the chart.
	ShowChartLabels	A value that indicates whether to show default chart labels.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart.
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )

### Public Constructors

	Name	Description
	C1CompositeChartExtender Constructor	

[Top](#)

### Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ChartLabelFormatString	A value that indicates the format string of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	ChartLabelStyle	A value that indicates style of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	ClusterOverlap	A value specifies the percentage of Composite elements in the same cluster overlap.
	ClusterRadius	A value specifies the corner-radius for the bar.
	ClusterSpacing	A value specifies the spacing between the adjacent bars.
	ClusterWidth	A value specifies the percentage of the plot area that each Composite cluster occupies.
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

 DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)
 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 ID	(Inherited from System.Web.UI.Control)
 Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

		teChartSeries,ChartAnimation>)
	Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

		teChartSeries,ChartAnimation>)
	OnClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

 Page	(Inherited from System.Web.UI.Control)
 Parent	(Inherited from System.Web.UI.Control)
 RenderingCompatibility	(Inherited from System.Web.UI.Control)
 SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 SeriesTransition	A value specifies whether to show animation and the duration and effect for the animation when reload data.
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 ShowChartLabels	Overridden.
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 Stacked	A value specifies whether to show a stacked chart.

 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 TemplateControl	(Inherited from System.Web.UI.Control)
 TemplateSourceDirector y	(Inherited from System.Web.UI.Control)
 TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 UniqueID	(Inherited from System.Web.UI.Control)
 UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ValidateRequestMode	(Inherited from System.Web.UI.Control)
 ViewStateMode	(Inherited from System.Web.UI.Control)
 Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	YAxes	A collection value specifies the y axes for multiple y axis compositechart.

	ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	ConvertAxisOADate	Overridden.
	CreateControlCollection	(Inherited from System.Web.UI.Control)
	DataBindChildren	(Inherited from System.Web.UI.Control)
	EnsureChildControl	(Inherited from System.Web.UI.Control)

s	
 EnsureID	(Inherited from System.Web.UI.Control)
 GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetDesignModeState	(Inherited from System.Web.UI.Control)
 GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetSeriesData	Overridden. Gets the series data of the specified series.
 HasEvents	(Inherited from System.Web.UI.Control)
 IsDateTimeSeries	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 IsLiteralContent	(Inherited from System.Web.UI.Control)
 LoadViewState	(Inherited from System.Web.UI.Control)
 NeedConvertOADate	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 OnBubbleEvent	(Inherited from System.Web.UI.Control)

	OnDataBinding	(Inherited from System.Web.UI.Control)
	OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## Protected Methods

Name	Description
------	-------------

 AddParsedSubObject	(Inherited from System.Web.UI.Control)
 BuildProfileTree	(Inherited from System.Web.UI.Control)
 CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClearCachedClientID	(Inherited from System.Web.UI.Control)
 ClearChildControlState	(Inherited from System.Web.UI.Control)
 ClearChildState	(Inherited from System.Web.UI.Control)
 ClearChildViewState	(Inherited from System.Web.UI.Control)
 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
 ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 ConvertAxisOADate	Overridden.
 CreateControlCollection	(Inherited from System.Web.UI.Control)
 DataBindChildren	(Inherited from System.Web.UI.Control)
 EnsureChildControls	(Inherited from System.Web.UI.Control)
 EnsureID	(Inherited from System.Web.UI.Control)

 GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetDesignModeState	(Inherited from System.Web.UI.Control)
 GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetSeriesData	Overridden. Gets the series data of the specified series.
 HasEvents	(Inherited from System.Web.UI.Control)
 IsDateTimeSeries	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 IsLiteralContent	(Inherited from System.Web.UI.Control)
 LoadViewState	(Inherited from System.Web.UI.Control)
 NeedConvertOADate	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 OnBubbleEvent	(Inherited from System.Web.UI.Control)
 OnDataBinding	(Inherited from System.Web.UI.Control)
 OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
	RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
	Render	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	ResolveAdapter	(Inherited from System.Web.UI.Control)
	SaveViewState	(Inherited from System.Web.UI.Control)
	SetDesignModeState	(Inherited from System.Web.UI.Control)
	TrackViewState	(Inherited from System.Web.UI.Control)

## GetSeriesData Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1CompositeChartExtender Class : GetSeriesData Method

The specified series.

Gets the series data of the specified series.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Function GetSeriesData( _     ByVal series As CompositeChartSeries _ ) As ChartSeriesData</pre>	
C#	
<pre>protected override ChartSeriesData GetSeriesData(     CompositeChartSeries series )</pre>	

### Parameters

*series*

The specified series.

### Return Value

Returns the series data which retrieved from the specified series.

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1CompositeChartExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

C1.Web.Wijmo.Extenders.C1Chart Namespace : C1CompositeChartExtender Class

For a list of all members of this type, see C1CompositeChartExtender members.

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

 AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ChartLabelFormatString	A value that indicates the format string of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 ChartLabelStyle	A value that indicates style of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 ClientID	(Inherited from System.Web.UI.Control)
 ClientIDMode	(Inherited from System.Web.UI.Control)
 ClusterOverlap	A value specifies the percentage of Composite elements in the same cluster overlap.
 ClusterRadius	A value specifies the corner-radius for the bar.

 ClusterSpacing	A value specifies the spacing between the adjacent bars.
 ClusterWidth	A value specifies the percentage of the plot area that each Composite cluster occupies.
 Controls	(Inherited from System.Web.UI.Control)
 Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)
 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
 Header	An object that value indicates the header of the chart element. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	ID	(Inherited from System.Web.UI.Control)
	Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

		teChartSeries,ChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)

		teChartSeries,ChartAnimation>)
	SeriesTransition	A value specifies whether to show animation and the duration and effect for the animation when reload data.
	Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	ShowChartLabels	Overridden.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	Stacked	A value specifies whether to show a stacked chart.
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	UniqueID	(Inherited from System.Web.UI.Control)

	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<CompositeChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	YAxes	A collection value specifies the y axes for multiple y axis compositechart.

## Public Constructors

	Name	Description
	C1LineChartExtender Constructor	Initializes a new instance of the C1LineChartExtender class.

Top

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ChartLabelFormatString	A value that indicates the format string of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	ChartLabelStyle	A value that indicates style of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)

 Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)
 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)

 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;LineChartSeries,LineChartAnimation&gt;</code> )
 Hole	Gets or sets the data hole value.
 ID	(Inherited from <code>System.Web.UI.Control</code> )
 Indicator	A value that provides information about the indicator. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;LineChartSeries,LineChartAnimation&gt;</code> )
 Legend	An object value indicates the legend of the chart element. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;LineChartSeries,LineChartAnimation&gt;</code> )
 MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;LineChartSeries,LineChartAnimation&gt;</code> )
 MarginLeft	A value that indicates the left margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;LineChartSeries,LineChartAnimation&gt;</code> )
 MarginRight	A value that indicates the right margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;LineChartSeries,LineChartAnimation&gt;</code> )
 MarginTop	A value that indicates the top margin of the chart area. (Inherited from <code>C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender&lt;LineChartSeries,LineChartAnimation&gt;</code> )

		rtSeries,LineChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)

	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	SeriesTransition	A value that indicates whether to show the effect and duration of the animation when reloading the data.

 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 TemplateControl	(Inherited from System.Web.UI.Control)
 TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Type	A value that indicates the type of the chart.
 UniqueID	(Inherited from System.Web.UI.Control)
 UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

[Top](#)

## Protected Properties

	Name	Description
	Adapter	(Inherited from System.Web.UI.Control)
	ChildControlsCreated	(Inherited from System.Web.UI.Control)
	ClientIDSeparator	(Inherited from System.Web.UI.Control)
	Events	(Inherited from System.Web.UI.Control)
	HasChildViewState	(Inherited from System.Web.UI.Control)
	IdSeparator	(Inherited from System.Web.UI.Control)
	IsTrackingViewState	(Inherited from System.Web.UI.Control)

	LoadViewStateByID	(Inherited from System.Web.UI.Control)
	ViewState	(Inherited from System.Web.UI.Control)
	ViewStateIgnoresCase	(Inherited from System.Web.UI.Control)

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
	HasControls	(Inherited from System.Web.UI.Control)

	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

Name	Description
 AddParsedSubObject	(Inherited from System.Web.UI.Control)
 BuildProfileTree	(Inherited from System.Web.UI.Control)
 CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClearCachedClientID	(Inherited from System.Web.UI.Control)
 ClearChildControlState	(Inherited from System.Web.UI.Control)
 ClearChildState	(Inherited from System.Web.UI.Control)
 ClearChildViewState	(Inherited from System.Web.UI.Control)
 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
 ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
🔗💎	ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
🔗💎	CreateControlCollection	(Inherited from System.Web.UI.Control)
🔗💎	DataBindChildren	(Inherited from System.Web.UI.Control)
🔗💎	EnsureChildControls	(Inherited from System.Web.UI.Control)
🔗💎	EnsureID	(Inherited from System.Web.UI.Control)
🔗💎	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗💎	GetDesignModeState	(Inherited from System.Web.UI.Control)
🔗💎	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
🔗💎	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗💎	GetSeriesData	Overridden. Gets the series data of the specified series.
🔗💎	HasEvents	(Inherited from System.Web.UI.Control)
🔗💎	IsDateTimeSeries	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)

		es,LineChartAnimation>)
	IsLiteralContent	(Inherited from System.Web.UI.Control)

## GetSeriesData Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1LineChartExtender Class : GetSeriesData Method

The specified series.

Gets the series data of the specified series.

## Syntax

Visual Basic (Declaration)

```
Protected Overrides Function GetSeriesData(_
 ByVal series As LineChartSeries _
) As ChartSeriesData
```

C#

```
protected override ChartSeriesData GetSeriesData(
 LineChartSeries series
)
```

## Parameters

*series*

The specified series.

## Return Value

Returns the series data which retrieved from the specified series.

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1LineChartExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

## Parameters

*e*

An **System.EventArgs** object that contains the event data.

 CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)
 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)

 Hole	Gets or sets the data hole value.
 ID	(Inherited from System.Web.UI.Control)
 Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
 NamingContainer	(Inherited from System.Web.UI.Control)
 OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	SeriesTransition	A value that indicates whether to show the effect and duration of the animation when reloading the data.
	Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineChartSeries,LineChartAnimation>)
	Type	A value that indicates the type of the chart.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<LineCha

		rtSeries,LineChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

## Public Constructors

	Name	Description
	C1PieChartExtender Constructor	Initializes a new instance of the C1PieChartExtender class.

Top

## Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChar

		tSeries,PieChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ChartLabelStyle	A value that indicates style of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Direction	A value indicates the direction used for a pie chart. 'counterClockwise' is default value. The second available value is 'clockwise'.
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableTouchBehavior	A value that indicates whether the piechart can be rotated and tooltip is always shown on touchable devices.
	EnableViewState	(Inherited from System.Web.UI.Control)
	Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 ID	(Inherited from System.Web.UI.Control)
 Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 InnerRadius	A value indicates the inner radius used for doughnut charts.
 Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

		tSeries,PieChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

 OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 Page	(Inherited from System.Web.UI.Control)
 Parent	(Inherited from System.Web.UI.Control)
 Radius	A value indicates the radius used for a pie chart. If the value is -1, then the radius will be calculated by the width/height value of the pie chart.
 RenderingCompatibility	(Inherited from System.Web.UI.Control)
 SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

 SeriesTransition	A value that indicates whether to show the effect and duration of the animation when reloading the data.
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 StartAngle	A value that indicates the start angle of a pie chart when painting sectors.
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 TemplateControl	(Inherited from System.Web.UI.Control)
 TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 UniqueID	(Inherited from System.Web.UI.Control)

	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)

🔗💎	ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
🔗💎	ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
🔗💎	CreateControlCollection	(Inherited from System.Web.UI.Control)
🔗💎	DataBindChildren	(Inherited from System.Web.UI.Control)
🔗💎	EnsureChildControls	(Inherited from System.Web.UI.Control)
🔗💎	EnsureID	(Inherited from System.Web.UI.Control)
🔗💎	GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗💎	GetDesignModeState	(Inherited from System.Web.UI.Control)
🔗💎	GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
🔗💎	GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
🔗💎	GetSeriesData	Gets the series data of the specified series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

 HasEvents	(Inherited from System.Web.UI.Control)
 IsDateTimeSeries	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 IsLiteralContent	(Inherited from System.Web.UI.Control)
 LoadViewState	(Inherited from System.Web.UI.Control)
 NeedConvertOADate	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 OnBubbleEvent	(Inherited from System.Web.UI.Control)
 OnDataBinding	(Inherited from System.Web.UI.Control)
 OnInit	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 OnPreRender	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
 RaiseBubbleEvent	(Inherited from System.Web.UI.Control)
 Render	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 ResolveAdapter	(Inherited from System.Web.UI.Control)
 SaveViewState	(Inherited from System.Web.UI.Control)
 SetDesignModeStat	(Inherited from System.Web.UI.Control)

OnPreRender Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1PieChartExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

Syntax

Visual Basic (Declaration)	
Protected Overrides Sub OnPreRender( _ ByVal e As System.EventArgs _ )	
C#	
protected override void OnPreRender( System.EventArgs e )	

Parameters

e

An **System.EventArgs** object that contains the event data.

## Properties

C1.Web.Wijmo.Extenders.C1Chart Namespace : C1PieChartExtender Class

For a list of all members of this type, see C1PieChartExtender members.

### Public Properties

Name	Description
 Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ChartLabelStyle	A value that indicates style of the chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 ClientID	(Inherited from System.Web.UI.Control)

	ClientIDMode	(Inherited from System.Web.UI.Control)
	Controls	(Inherited from System.Web.UI.Control)
	Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Direction	A value indicates the direction used for a pie chart. 'counterClockwise' is default value. The second available value is 'clockwise'.
	DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableTouchBehavior	A value that indicates whether the piechart can be rotated and tooltip is always shown on touchable devices.
	EnableViewState	(Inherited from System.Web.UI.Control)
	Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

		tSeries,PieChartAnimation>)
	Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	ID	(Inherited from System.Web.UI.Control)
	Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	InnerRadius	A value indicates the inner radius used for doughnut charts.
	Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

		tSeries,PieChartAnimation>)
	MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	Radius	A value indicates the radius used for a pie chart. If the value is -1, then the radius will be calculated by the width/height value of the pie chart.
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)

 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 SeriesTransition	A value that indicates whether to show the effect and duration of the animation when reloading the data.
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 ShowChartLabels	A value that indicates whether to show default chart labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 StartAngle	A value that indicates the start angle of a pie chart when painting sectors.
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<PieChartSeries,PieChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

### Public Properties

	Name	Description
	Animation	A value that indicates whether to show animation and the duration and easing for the animation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoResize	A value that indicates whether to redraw the chart automatically when resizing the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	Axis	A value that provides information about the axes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

 CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClientID	(Inherited from System.Web.UI.Control)
 ClientIDMode	(Inherited from System.Web.UI.Control)
 Controls	(Inherited from System.Web.UI.Control)
 Culture	Gets or sets the culture information for the input control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 CultureCalendar	A value that indicators the culture calendar to format the text. This property must work with Culture property. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 DisableDefaultTextStyle	A value that indicates whether to disable the default text style. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 EnableTheming	(Inherited from System.Web.UI.Control)
 EnableViewState	(Inherited from System.Web.UI.Control)
 Footer	An object value that indicates the footer of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)

 Header	An object that value indicates the header of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 ID	(Inherited from System.Web.UI.Control)
 Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 MarginRight	A value that indicates the right margin of the chart area.

		(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)

		hartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	SeriesStyles	An array collection that contains the style to be charted. (Inherited from

		C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	SeriesTransition	A value that indicates whether to show animation and the duration and effect for the animation when reload data.
	Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)

	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ZoomOnHover	A value that indicates whether to zoom in on the marker on hover.

## Public Methods

	Name	Description
	ApplyStyleSheetSkin	(Inherited from System.Web.UI.Control)
	DataBind	Overloaded. (Inherited from System.Web.UI.Control)
	Dispose	Enables a server control to perform final clean up before it is released from memory. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	EnsureValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	FindControl	Overloaded. (Inherited from System.Web.UI.Control)
	Focus	(Inherited from System.Web.UI.Control)
	GetPropertyValue<V>	Gets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	GetRouteUrl	Overloaded. (Inherited from System.Web.UI.Control)
	GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)

	HasControls	(Inherited from System.Web.UI.Control)
	RenderControl	Overloaded. (Inherited from System.Web.UI.Control)
	ResolveClientUrl	(Inherited from System.Web.UI.Control)
	ResolveUrl	(Inherited from System.Web.UI.Control)
	SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

Top

## Protected Methods

Name	Description
 AddParsedSubObject	(Inherited from System.Web.UI.Control)
 BuildProfileTree	(Inherited from System.Web.UI.Control)
 CheckIfValid	(Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 ClearCachedClientID	(Inherited from System.Web.UI.Control)
 ClearChildControlState	(Inherited from System.Web.UI.Control)
 ClearChildState	(Inherited from System.Web.UI.Control)
 ClearChildViewState	(Inherited from System.Web.UI.Control)
 ClearEffectiveClientIDMode	(Inherited from System.Web.UI.Control)
 ConvertAxisByOADate	Convert the Max and Min property for axis when the axis is datetime.

te	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 ConvertAxisOADate	When axis is dateTime, because the ToOADate method return value's unit is day, Here we should convert it to millisecond. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 CreateControlCollection	(Inherited from System.Web.UI.Control)
 DataBindChildren	(Inherited from System.Web.UI.Control)
 EnsureChildControls	(Inherited from System.Web.UI.Control)
 EnsureID	(Inherited from System.Web.UI.Control)
 GetCulture	Get the culture setting of this control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetDesignModeState	(Inherited from System.Web.UI.Control)
 GetScriptDescriptors	When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 GetScriptReferences	When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 GetSeriesData	Overridden. Gets the series data of the specified series.
 HasEvents	(Inherited from System.Web.UI.Control)

 <b>IsDateTimeSeries</b>	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 <b>IsLiteralContent</b>	(Inherited from System.Web.UI.Control)
 <b>LoadViewState</b>	(Inherited from System.Web.UI.Control)
 <b>NeedConvertOADate</b>	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 <b>OnBubbleEvent</b>	(Inherited from System.Web.UI.Control)
 <b>OnDataBinding</b>	(Inherited from System.Web.UI.Control)
 <b>OnInit</b>	Raises the <b>System.Web.UI.Control.Init</b> event. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
 <b>OnPreRender</b>	Overridden. Raises the <b>System.Web.UI.Control.OnPreRender(System.EventArgs)</b> event and registers the extender control with the <b>System.Web.UI.ScriptManager</b> control.
 <b>RaiseBubbleEvent</b>	(Inherited from System.Web.UI.Control)
 <b>Render</b>	(Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 <b>ResolveAdapter</b>	(Inherited from System.Web.UI.Control)
 <b>SaveViewState</b>	(Inherited from System.Web.UI.Control)
 <b>SetDesignModeState</b>	(Inherited from System.Web.UI.Control)

	TrackViewState	(Inherited from System.Web.UI.Control)
-----------------------------------------------------------------------------------	----------------	----------------------------------------

## GetSeriesData Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1ScatterChartExtender Class : GetSeriesData Method

The specified series.

Gets the series data of the specified series.

## Syntax

Visual Basic (Declaration)	
Protected Overrides Function GetSeriesData( _ ByVal <i>series</i> As ScatterChartSeries _ ) As ChartSeriesData	
C#	
protected override ChartSeriesData GetSeriesData( ScatterChartSeries <i>series</i> )	

### Parameters

*series*

The specified series.

### Return Value

Returns the series data which retrieved from the specified series.

## OnPreRender Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > C1ScatterChartExtender Class : OnPreRender Method

An **System.EventArgs** object that contains the event data.

Raises the **System.Web.UI.Control.OnPreRender(System.EventArgs)** event and registers the extender control with the **System.Web.UI.ScriptManager** control.

## Syntax

Visual Basic (Declaration)	
<pre>Protected Overrides Sub OnPreRender( _     ByVal e As System.EventArgs _ )</pre>	
C#	
<pre>protected override void OnPreRender(     System.EventArgs e )</pre>	

### Parameters

*e*

An **System.EventArgs** object that contains the event data.

	Height	A value that indicates the height of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	Hint	A value that is used to indicate whether to show and what to show on the open tooltip. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	ID	(Inherited from System.Web.UI.Control)
	Indicator	A value that provides information about the indicator. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)

 Legend	An object value indicates the legend of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 MarginBottom	A value that indicates the bottom margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 MarginLeft	A value that indicates the left margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 MarginRight	A value that indicates the right margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 MarginTop	A value that indicates the top margin of the chart area. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 NamingContainer	(Inherited from System.Web.UI.Control)
 OnClientBeforePaint	Occurs before the canvas is painted. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 OnClientBeforeSeriesChange	Occurs before the series changes. This event can be cancelled. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)

	OnClientClick	Occurs when the user clicks the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseDown	Occurs when the user clicks a mouse button. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseMove	Occurs when the user moves the mouse pointer while it is over a chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseOut	Occurs when the user moves the pointer off of the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseOver	Occurs when the user first places the pointer over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientMouseUp	Occurs when the user releases a mouse button while the pointer is over the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientPainted	Occurs after the canvas is painted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	OnClientSeriesChanged	Occurs when the series changes. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	Page	(Inherited from System.Web.UI.Control)

 Parent	(Inherited from System.Web.UI.Control)
 RenderingCompatibility	(Inherited from System.Web.UI.Control)
 SeriesHoverStyles	An array collection that contains the style to be charted when hovering the chart element. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 SeriesList	An array collection that contains the data to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 SeriesStyles	An array collection that contains the style to be charted. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 SeriesTransition	A value that indicates whether to show animation and the duration and effect for the animation when reload data.
 Shadow	A value that indicates whether to show shadow for the chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.Control)
 TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
 TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from

		C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	TextStyle	A value that indicates the style of the chart text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ValidateRequestMethod	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	A value that indicates the width of chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.C1ChartCoreExtender<ScatterChartSeries,ChartAnimation>)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase)
	ZoomOnHover	A value that indicates whether to zoom in on the marker on hover.

CandlestickChartStyle Members

## Properties

C1.Web.Wijmo.Extenders.C1Chart Namespace : CandlestickChartStyle Class

For a list of all members of this type, see [CandlestickChartStyle](#) members.

### Public Properties

	Name	Description
	Close	Gets or sets the chart style for close element.
	FallingClose	Gets or sets the chart style when close is lower than open.
	HighLow	
	Open	Gets or sets the chart style for open element.
	RisingClose	Gets or sets the chart style when close is higher than open.
	UnchangeClose	

[Top](#)

### Protected Properties

	Name	Description
	Props	Gets a hashtable to store property info. (Inherited from C1.Web.Wijmo.Extenders.Settings)

## Public Properties

	Name	Description
	Alignment	A value that indicates the alignment of the axis text.
	AnnoFormatString	A value that indicates the format string of annotation.
	AnnoMethod	A value that indicates the method of annotation.
	AutoMajor	A value that indicates whether the major tick mark values are calculated automatically.
	AutoMax	A value that indicates whether the maximum axis value is calculated automatically.
	AutoMin	A value that indicates whether the minimum axis value is calculated automatically.
	AutoMinor	A value that indicates whether the minor tick mark values are calculated automatically.
	AxisStyle	A value that indicates the style of the axis.
	Compass	A value that indicates the compass of the axis.
	GridMajor	A value that provides information for the major grid line.
	GridMinor	A value that provides information for the minor grid line.
	Labels	A value that provides information for the labels.
	Max	A value that indicates the maximum value of the axis.

	Min	A value that indicates the minimum value of the axis.
	Origin	A value that indicates the origin value of the axis.
	Text	A value that indicates the text of the axis.
	TextStyle	A value that indicates the style of text of the axis.
	TextVisible	A value that indicates the visibility of the axis text.
	TickMajor	A value that provides information for the major tick.
	TickMinor	A value that provides information for the minor tick.
	UnitMajor	A value that indicates the units between major tick marks.
	UnitMinor	A value that indicates the units between minor tick marks.
	ValueLabelList	A value that shows a collection of valueLabels for the axis.
	Visible	A value that indicates the visibility of the axis.

------	-------------

	Alignment	A value that indicates the alignment of the axis text.
	AnnoFormatString	A value that indicates the format string of annotation.
	AnnoMethod	A value that indicates the method of annotation.
	AutoMajor	A value that indicates whether the major tick mark values are calculated automatically.
	AutoMax	A value that indicates whether the maximum axis value is calculated automatically.
	AutoMin	A value that indicates whether the minimum axis value is calculated automatically.
	AutoMinor	A value that indicates whether the minor tick mark values are calculated automatically.
	AxisStyle	A value that indicates the style of the axis.
	Compass	A value that indicates the compass of the axis.
	GridMajor	A value that provides information for the major grid line.
	GridMinor	A value that provides information for the minor grid line.
	Labels	A value that provides information for the labels.
	Max	A value that indicates the maximum value of the axis.
	Min	A value that indicates the minimum value of the axis.
	Origin	A value that indicates the origin value of the axis.
	Text	A value that indicates the text of the axis.
	TextStyle	A value that indicates the style of text of the axis.

	TextVisible	A value that indicates the visibility of the axis text.
	TickMajor	A value that provides information for the major tick.
	TickMinor	A value that provides information for the minor tick.
	UnitMajor	A value that indicates the units between major tick marks.
	UnitMinor	A value that indicates the units between minor tick marks.
	ValueLabelList	A value that shows a collection of valueLabels for the axis.
	Visible	A value that indicates the visibility of the axis.

## X Property

C1.Web.Wijmo.Extenders.C1Chart Namespace > ChartStyle Class : X Property

A value that indicates the x point of the chart style.

## Syntax

Visual Basic (Declaration)

```
<System.ComponentModel.DefaultValueAttribute()>
<C1CategoryAttribute("Style")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<WidgetOptionAttribute()>
<C1DescriptionAttribute("A value that indicates the x point of the chart
style.")>
Public Property X As System.Nullable(Of Double)
```

C#

```
[System.ComponentModel.DefaultValue()]
[C1Category("Style")]
[System.ComponentModel.NotifyParentProperty(true)]
[WidgetOption()]
[C1Description("A value that indicates the x point of the chart style.")]
```

```
public System.Nullable<double> X {get; set;}
```

## ChartY1Data Constructor(Double)

C1.Web.Wijmo.Extenders.C1Chart Namespace > ChartY1Data Class > ChartY1Data Constructor :  
ChartY1Data Constructor(Double)

A double value is set to DoubleValue property.

Initializes a new instance of the ChartY1Data class.

### Syntax

Visual Basic (Declaration)	
<pre>Public Function New( _     ByVal <i>doubleValue</i> As System.Double _ )</pre>	
C#	
<pre>public ChartY1Data(     System.double <i>doubleValue</i> )</pre>	

### Parameters

*doubleValue*

A double value is set to DoubleValue property.

### Public Properties

	Name	Description
	Alignment	A value that indicates the alignment of the axis text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	AnnoFormatString	A value that indicates the format string of annotation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	AnnoMethod	A value that indicates the method of annotation. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	AutoMajor	A value that indicates whether the major tick mark values are calculated automatically. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	AutoMax	A value that indicates whether the maximum axis value is calculated automatically. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	AutoMin	A value that indicates whether the minimum axis value is calculated automatically. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	AutoMinor	A value that indicates whether the minor tick mark values are calculated automatically. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	AxisStyle	A value that indicates the style of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	Compass	A value that indicates the compass of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	GridMajor	A value that provides information for the major grid line. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	GridMinor	A value that provides information for the minor grid line. (Inherited

		from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	Height	A value that determine the height of the axis. This property is for supporting part axis.
	Labels	A value that provides information for the labels. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	Max	A value that indicates the maximum value of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	Min	A value that indicates the minimum value of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	Origin	A value that indicates the origin value of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	Text	A value that indicates the text of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	TextStyle	A value that indicates the style of text of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	TextVisible	A value that indicates the visibility of the axis text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	TickMajor	A value that provides information for the major tick. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	TickMinor	A value that provides information for the minor tick. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	UnitMajor	A value that indicates the units between major tick marks. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	UnitMinor	A value that indicates the units between minor tick marks. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)

	ValueLabelList	A value that shows a collection of valueLabels for the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)
	Visible	A value that indicates the visibility of the axis. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartAxis)

## Overview

### Members

C1.Web.Wijmo.Extenders.C1Chart Namespace : CompositeSharedPieSeries Class

Represents the CompositeSharedPieSeries class which just contains the settings for the pie chart chart series. It is designed for setting each pie chart series in compositechart "SharedPieChartSeries" property.

## Object Model

CompositeSharedPieSeries

## Syntax

Visual Basic (Declaration)

```
Public Class CompositeSharedPieSeries
 Inherits CompositeChartSeries
 Implements
 C1.Web.Wijmo.Extenders.IC1Cloneable, C1.Web.Wijmo.Extenders.IJsonEmptiable
```

C#

```
public class CompositeSharedPieSeries : CompositeChartSeries,
 C1.Web.Wijmo.Extenders.IC1Cloneable, C1.Web.Wijmo.Extenders.IJsonEmptiable
```

## Inheritance Hierarchy

## Public Constructors

	Name	Description
	CompositeSharedPieSeries Constructor	

[Top](#)

## Public Properties

	Name	Description
	Center	A value specifies the center of the pie chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.CompositeChartSeries)
	Data	A ChartSeriesData value specifies the data of the chart series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.CompositeChartSeries)
	Label	A value that indicates the label of the chart series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	LegendEntry	A value that indicates the legend entry of the chart series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	PieSeriesList	A collection value specifies the series for the pie chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.CompositeChartSeries)
	Radius	A value specifies the radius of the pie chart. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.CompositeChartSeries)
	TextStyle	A value that indicates the style of the series text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	TrendlineSeries	A value that indicates the data of the trendline series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	Visible	A value that indicates the visibility of the chart series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)

	Name	Description
	Data	A value that indicates the data of the chart series.

	IsTrendline	A value that indicates whether the chart series is trend line series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	Label	A value that indicates the label of the chart series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	LegendEntry	A value that indicates the legend entry of the chart series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	MarkerType	A value that indicates the type of the scatter.
	TextStyle	A value that indicates the style of the series text. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	TrendlineSeries	A value that indicates the data of the trendline series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)
	Visible	A value that indicates the visibility of the chart series. (Inherited from C1.Web.Wijmo.Extenders.C1Chart.ChartSeries)

## ChartEasing

C1.Web.Wijmo.Extenders.C1Chart Namespace : ChartEasing Enumeration

Use the members of this enumeration to set the value of the ChartAnimation.Easing property.

### Syntax

Visual Basic (Declaration)	
<pre>Public Enum ChartEasing     Inherits System.Enum</pre>	
C#	
<pre>public enum ChartEasing : System.Enum</pre>	

### Members

Member	Description
<b>EaseInBack</b>	Back easing in. Starts slowly and then accelerates.
<b>EaseInCubic</b>	Cubic easing in. Begins at zero velocity and then accelerates.
<b>EaseInOutCubic</b>	Cubic easing in and out. Begins at zero velocity, accelerates until halfway, and then decelerates to zero velocity again.
<b>EaseOutBack</b>	Back easing out. Begins quickly and then decelerates.
<b>EaseOutBounce</b>	Bouncing easing out. Begins quickly and then decelerates. The number of bounces is related to the duration: longer durations produce more bounces.
<b>EaseOutCubic</b>	Cubic easing in and out. Begins at full velocity and then decelerates to zero.
<b>EaseOutElastic</b>	Quintic easing out. Begins at full velocity and then decelerates to zero.

### Inheritance Hierarchy

C#	
<pre>public enum ChartLabelCompass : System.Enum</pre>	

## Members

Member	Description
<b>East</b>	Places label to the East or to the right of the data point.
<b>North</b>	Places label to the north or above the data point.
<b>NorthEast</b>	Places label to the NorthEast or above and right of the data point.
<b>NorthWest</b>	Places label to the NorthWest or above and left of the data point.
<b>South</b>	Places label to the South or below the data point.
<b>SouthEast</b>	Places label to the SouthEast or below and right of the data point.
<b>SouthWest</b>	Places label to the SouthWest or below and left of the data point.

<b>West</b>	Places label to the West or left of the data point.

## ChartOrientation

C1.Web.Wijmo.Extenders.C1Chart Namespace : ChartOrientation Enumeration

Use the members of this enumeration to set the value of the ChartLegend.Orientation property.

## Syntax

Visual Basic (Declaration)	
<b>Public Enum ChartOrientation</b> Inherits System.Enum	
C#	
<b>public enum ChartOrientation</b> : System.Enum	

## Members

Member	Description
<b>Horizontal</b>	Legend entries are stacked vertically as legend height permits. If sufficient height is not available, additional legend columns are created.
<b>Vertical</b>	Legend entries are added side by side as (horizontally) as legend width permits. If sufficient width is not available, additional legend rows are created.

## ChartSeriesType

C1.Web.Wijmo.Extenders.C1Chart Namespace : ChartSeriesType Enumeration

The ChartSeriesType represents the type of the series for the chart.

## Syntax

Visual Basic (Declaration)	
<pre>Public Enum ChartSeriesType     Inherits System.Enum</pre>	
C#	
<pre>public enum ChartSeriesType : System.Enum</pre>	

## Members

Member	Description
<b>Area</b>	Draw this series with area chart shape.
<b>Bar</b>	Draw this series with bar chart shape.
<b>Bezier</b>	Draw this series with bezier chart shape.
<b>Candlestick</b>	Draw this series with candlestick chart shape.
<b>Column</b>	Draw this series with column chart shape.
<b>HI</b>	Draw this series with high-low chart shape.
<b>Line</b>	Draw this series with line chart shape.
<b>Ohlc</b>	Draw this series with high-low-open-close chart shape.

<b>Pie</b>	Draw this series with pie chart shape.
<b>Scatter</b>	Draw this series with scatter chart shape.
<b>SharedPie</b>	Draw this series with several pie chart which shared their legend and style.
<b>Spline</b>	Draw this series with spline chart shape.
<b>Trendline</b>	Draw this series with trendline chart shape.

### Add(Double) Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > IChartYAxisList Interface > Add Method : Add(Double)  
Method

The double data point value.

Add a double data point value to the series.

## Syntax

Visual Basic (Declaration)	
Overloads Sub Add( _ ByVal <i>value</i> As System.Double _ )	
C#	
void Add( System.double <i>value</i>	

)

## Parameters

*value*

The double data point value.

## See Also

## Reference

[IChartYAxisList Members](#)

[Overload List](#)

## Add(Nullable<Double>) Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > IChartYAxisList Interface > Add Method :

Add(Nullable<Double>) Method

The double data point value.

Add a double data point value to the series.

## Syntax

Visual Basic (Declaration)

```
Overloads Sub Add(_
 ByVal value As System.Nullable(Of Double) _
)
```

C#

```
void Add(
 System.Nullable<double> value
)
```

## Parameters

*value*

The double data point value.

## See Also

[Overload List](#)

## Add(DateTime) Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > IChartYAxisList Interface > Add Method : Add(DateTime) Method

The DateTime data point value.

Add a DateTime data point value to the series.

## Syntax

Visual Basic (Declaration)

```
Overloads Sub Add(_
 ByVal value As System.Date _
)
```

C#

```
void Add(
 System.DateTime value
)
```

## Parameters

*value*

The DateTime data point value.

## See Also

## Add(Nullable<DateTime>) Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > IChartYAxisList Interface > Add Method : Add(Nullable<DateTime>) Method

The DateTime data point value.

Add a DateTime data point value to the series.

## Syntax

Visual Basic (Declaration)	
<pre>Overloads Sub Add( _     ByVal value As System.Nullable(Of Date) _ )</pre>	
C#	
<pre>void Add(     System.Nullable&lt;DateTime&gt; value )</pre>	

### Parameters

*value*

The DateTime data point value.

Overload List

## AddRange(Nullable<Double>[]) Method

C1.Web.Wijmo.Extenders.C1Chart Namespace > IChartYAxisList Interface > AddRange Method :

AddRange(Nullable<Double>[]) Method

The specified double data point values.

Add the specified double data point values to the series.

## Syntax

Visual Basic (Declaration)

```
Overloads Sub AddRange(_
 ByVal values() As System.Nullable(Of Double) _
)
```

C#

```
void AddRange(
 System.Nullable<double>[] values
)
```

## Parameters

*values*

The specified double data point values.

## Public Properties

	Name	Description
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	AutoComplete	A value that determines whether to start the auto-complete function after typing in the text if a match exists. Default: true. Type: Boolean.
	AutoFilter	A value determines whether to shorten the drop-down list items by matching the text in the textbox after typing. Default: true. Type: Boolean.
	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ClientID	(Inherited from System.Web.UI.Control)
	ClientIDMode	(Inherited from System.Web.UI.Control)
	Columns	An array that specifies the column collections of wijcombobox. Example: columns: [{name: "header1", width: 150}, {name: "header2", width: 150}, {name:

		"header3", width: 150}] Default: []. Type: Array.
	Controls	(Inherited from System.Web.UI.Control)
	Data	A value that specifies the underlying data source provider of wijcombobox
	Delay	A value that determines the duration (in milliseconds) of the time to delay before autocomplete begins after typing stops. Default: 300. Type: Number.
	DropDownHeight	A value that specifies the height of the drop-down list. Default: 300. Type: Number.
	DropDownListPosition	A value that specifies the position options of the drop-down list
	DropDownWidth	A value that specifies the width of the drop-down list. Default: "-1". Type: Number.
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	EnableTheming	(Inherited from System.Web.UI.Control)
	EnableViewState	(Inherited from System.Web.UI.Control)
	EnsureDropDownOnBody	A value indicating the dropdown element will be append to the body or combobox container. If the value is true, the dropdown list will be appended to body element, else it will append to the combobox container. Default: true. Type: Boolean.
	ForceSelectionText	A value that determines whether to check the input text against the text of the selected item when the

		focus blurs. Default: false. Type: Boolean.
	HidingAnimation	A value specifies the animation options for the drop-down list when it is hidden. Default: null. Type: Object.
	HighlightMatching	A value that determines whether to highlight the keywords in an item. If "abc" is typed in the textbox, all "abc" matches are highlighted in the drop-down list. Default: true. Type: Boolean.
	ID	(Inherited from System.Web.UI.Control)
	IsEditable	A value that determines whether input is editable. Default: true. Type: Boolean.
	LabelText	A value that specifies the text in the wijcombobox label. Default: null. Type: String.
	ListOptions	The object contains the options of wijlist
	MinLength	A value that determines the minimum length of text that can be entered in the wijcombobox text box to issue an AJAX request. Default: 4. Type: Number.
	MultipleSelectionSeparator	A value that specifies the separator for the multiple selected items text in the textbox. Default: ",". Type: String.
	NamingContainer	(Inherited from System.Web.UI.Control)
	OnClientChanged	A function called when select item is changed.
	OnClientClose	A function called when drop-down list is closed.
	OnClientOpen	A function called when drop-down list is opened.

	OnClientSearch	A function called before searching the list.
	OnClientSelect	A function called when any item in list is selected.
	OnClientSelectedIndexChanged	A function called after the selected index of the C1ComboBox has changed.
	OnClientSelectedIndexChanging	A function called when the selected index of the C1ComboBox is about to change.
	OnClientTextChanged	A function called when when the Text property is changed.
	Page	(Inherited from System.Web.UI.Control)
	Parent	(Inherited from System.Web.UI.Control)
	RenderingCompatibility	(Inherited from System.Web.UI.Control)
	SelectedIndex	A value that specifies the index of the item to select when using single mode. If the selectionMode is "multiple", then this option could be set to an array of Number which contains the indices of the items to select. Default: -1. Type: Number/Array.
	SelectedValue	Gets or sets the SelectedValue of C1.Web.Wijmo.Extenders.C1ComboBox.
	SelectElementWidthFix	A value added to the width of the target select element to account for the scroll bar width of superpanel. Default: 6. Type: Number. Unit for this value is pixel. Because the width of the scroll bar may be different between browsers if wijcombobox is initialized with the width of the HTML select element, the text may be hidden by the scroll bar of wijcombobox.

	SelectionMode	
	SelectOnItemFocus	A value that determines whether to select the item when the item gains focus or is activated. Default: false. Type: Boolean.
	ShowingAnimation	A value that specifies the animation options for a drop-down list when it is visible. Default: null. Type: Object.
	ShowTrigger	A value that determines whether to show the trigger of wijcombobox. Default: true. Type: Boolean.
	Site	(Inherited from System.Web.UI.Control)
	SkinID	(Inherited from System.Web.UI.Control)
	TargetControlID	(Inherited from System.Web.UI.ExtenderControl)
	TargetSelector	Target CSS selector that should be used instead of TargetControlID property. You can use TargetSelector property when you need populate extender functionality on several page elements(controls) at once. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TemplateControl	(Inherited from System.Web.UI.Control)
	TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Theme	Name of the theme that will be used to style widgets. Available embedded themes: aristo / midnight / ui-lightness. Note, only one theme can be used for the whole page at one time. Please, make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase

		)
	ThemeSwatch	A value that indicates the theme swatch of the extender, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	TriggerPosition	A value that specifies the position of the drop-down list trigger. Default: "right". Type: String.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	ViewStateMode	(Inherited from System.Web.UI.Control)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
	WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Extenders.WidgetExtenderControlBase )
