The ComponentOne product name is a trademark and ComponentOne is a registered trademark of GrapeCity, Inc. All other trademarks used herein are the properties of their respective owners.

Warranty

ComponentOne warrants that the media on which the software is delivered is free from defects in material and workmanship, assuming normal use, for a period of 90 days from the date of purchase. If a defect occurs during this time, you may return the defective media to ComponentOne, along with a dated proof of purchase, and ComponentOne will replace it at no charge. After 90 days, you can obtain a replacement for the defective media by sending it and a check for \$25 (to cover postage and handling) to ComponentOne.

Except for the express warranty of the original media on which the software is delivered is set forth here, ComponentOne makes no other warranties, express or implied. Every attempt has been made to ensure that the information contained in this manual is correct as of the time it was written. ComponentOne is not responsible for any errors or omissions. ComponentOne's liability is limited to the amount you paid for the product. ComponentOne is not liable for any special, consequential, or other damages for any reason.

Copying and Distribution

While you are welcome to make backup copies of the software for your own use and protection, you are not permitted to make copies for the use of anyone else. We put a lot of time and effort into creating this product, and we appreciate your support in seeing that it is used by licensed users only.

Overview

Generate a customizable star rating control automatically with **Rating for ASP.NET Web Forms**.  [Getting Started](#)

To get started, review the following topics:

- [Key Features](#)
- [Quick Start](#)

Help with ASP.NET Web Forms Edition

Getting Started

For information on installing **ComponentOne Studio for ASP.NET Web Forms Edition**, licensing, technical support, namespaces and creating a project with the control, please visit [Getting Started with ASP.NET Web Forms Edition](#).

Key Features

The following are some of the main features of **Rating for ASP.NET Web Forms** that you may find useful:

- **Orientation**
You can place the rating control horizontally or vertically on the page.
- **Use Custom Icons**
Enhance the rating control or make it unique using any icon you like.
- **Animation**
Use the **RatingAnimation** properties to fully customize the animation effects for the rating icons.

[Quick Start](#)

Quick Start

The **Rating for ASP.NET Web Forms** quick start will lead you through the creation of a Web form that uses the **C1Rating** control. In the following steps, you will add the **C1Rating** control to your project, customize the control's appearance using the designer, and run the application. To begin, create a new ASP.NET Web application and complete the following steps:

See Also

[Step 1 of 3: Adding the C1Rating Control to a Project](#)

[Step 2 of 3: Customizing the Appearance of the C1Rating Control](#)

[Step 3 of 3: Using the C1Rating Control at Run Time](#)

Step 1 of 3: Adding the C1Rating Control to a Project

In the first step of this quick start, you will create an ASP.NET Web application project and add a [C1Rating](#) control to the Web page.

1. Create an ASP.NET Project.
2. Click the **Design** tab to enter Design view.
3. In the Toolbox, double-click [C1Rating](#). A [C1Rating](#) control appears in your project.

In the next step, you will customize the appearance of the [C1Rating](#) control in Design view.

See Also

[Step 2 of 3: Customizing the Appearance of the C1Rating Control](#)

Step 2 of 3: Customizing the Appearance of the C1Rating Control

In the last step of this quick start, you created an ASP.NET Web application and added the [C1Rating](#) control to your project. In this step, you will customize the appearance of the [C1Rating](#) control in Design view. For this example, we will rate a movie.

1. Select the [C1Rating](#) control and click the smart tag.
2. Set the [Count](#) property to **4**. When the application runs, there will be **4** stars for the rating control.
3. Set the [TotalValue](#) property to **4**. Each star will have a value of 1 point.
4. Set the [Split](#) property to **2**. Each star will have two halves, each half is worth .5 points.
5. Set the [Value](#) property to **2**. The [C1Rating](#) control will start out with a rating of 2 shaded stars.
6. Add a **Label** control, set its **Text** property to the movie's title, and add an image for the movie.

In the next step, you will build the project and sample a few of [C1Rating](#)'s run-time features.

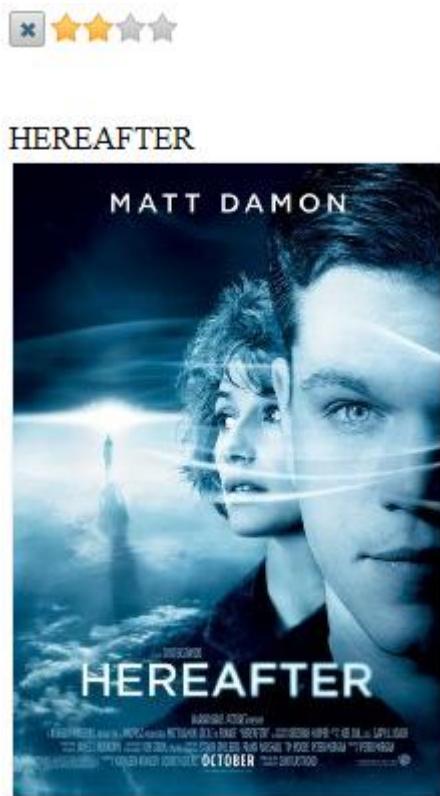

See Also

[Step 3 of 3: Using the C1Rating Control at Run Time](#)

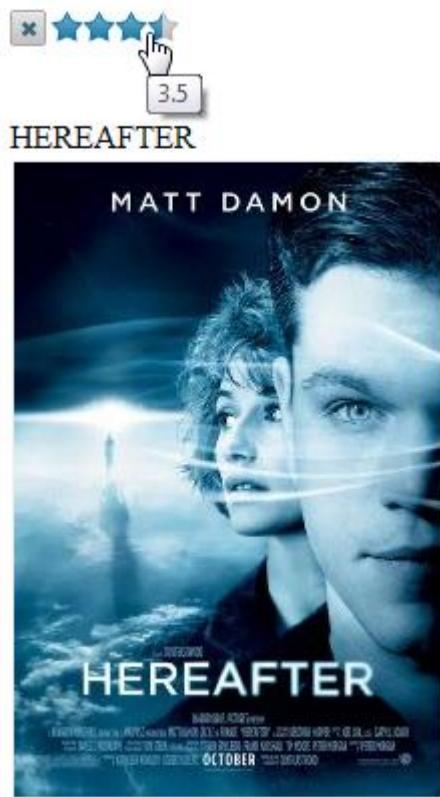

Step 3 of 3: Using the C1Rating Control at Run Time

In the last step of this quick start, you customized the appearance of the [C1Rating](#) control. In this step, you will run your project and explore several of [C1Rating](#)'s run-time features.

1. Press **F5** to build the project. The application will look similar to this:

2. Click the **Cancel this rating** button  that appears before the stars.
3. Hover over the stars and click on the rating you want. Notice the stars are filled by halves, each half equal to .5 points.

Congratulations! You have successfully completed all three steps of the **Rating for ASP.NET Web Forms** quick start.

See Also

[Design-Time Support](#)

Design-Time Support

Rating for ASP.NET Web Forms provides an automatic customizable star rating control. You can easily customize the control using properties in the **Tasks** menu and Visual Studio **Properties** window.

Invoking the Task Menus

In Visual Studio, the **Rating for ASP.NET Web Forms** control includes a smart tag. A smart tag represents a short-cut **Tasks** menu that provides the most commonly used properties in each control. You can invoke each control's **Tasks** menu by clicking on the smart tag (in the upper-right corner of the control. For more information on how to use the smart tags, see [Smart Tag](#).

Showing the Rating for ASP.NET Web Forms Control's Properties

You can access the properties for the **Rating for ASP.NET Web Forms**'s control simply by right-clicking the control and selecting **Properties** or by selecting the control from the drop-down list box of the **Properties** window.

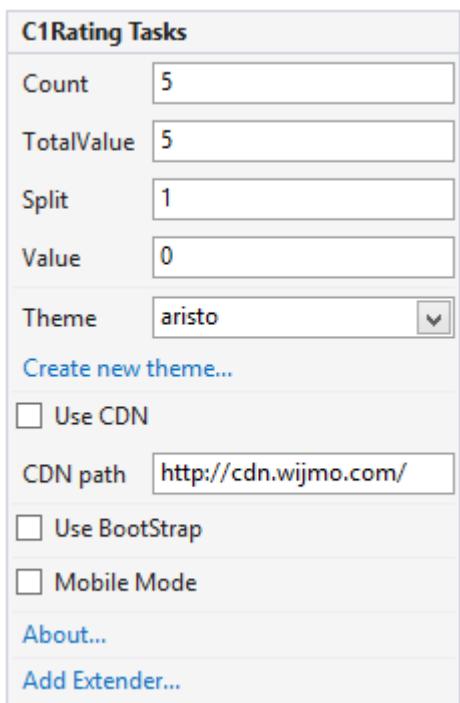

See Also

[Smart Tag](#)

Smart Tag

In Visual Studio, the **C1Rating** control includes a smart tag (▣). A smart tag represents a short-cut **Tasks** menu that provides the most commonly used properties in each control.

To access the **C1Rating Tasks** menu, click the smart tag (▣) in the upper-right corner of the **C1Rating** control. This will open the **C1Rating Tasks** menu.

The **C1Rating Tasks** menu operates as follows:

- **Count**
Enter the number of stars you would like to display for the rating using the **Count** property.
- **TotalValue**
Enter the total value for the rating system in the **Total** Value property. This will determine the weight of each star. For example, if you have **5** stars but a **TotalValue** of **6**, each star is worth 1.2 points.
- **Split**
Use the **Split** property to determine how many sections you want each star to have. This will also determine the weight of each section. For example, if you have **5** stars with

- a **TotalValue** of **6** and two splits (the star will have two halves), each section of a star is worth .6 points.
- **Value**
Use the **Value** property to specify the value of the rating that will appear when the application runs. For example, if there are **5** stars with a **TotalValue** of **5**, setting the **Value** to **3** will show **3** shaded stars out of **5**.
- **Theme**
Click the drop-down arrow in the **Theme** property to select one of the built-in themes to change the appearance of the control.
- **Create new theme...**
The **Create new theme...** option opens **ThemeRoller for Visual Studio**. This allows you to customize a them without leaving your development environment. To find more information on using **ThemeRoller** in your application, see [ThemeRoller for Visual Studio](#).
- **Use CDN**
Check the **Use CDN** check box to link to the content delivery network to access Wijmo widgets and cascading style sheets.
- **CDN path**
The **CDN path** points to the content delivery network where you can access Wijmo widgets and cascading style sheets.
- **Use Bootstrap**
Selecting the **Use Bootstrap** option applies Bootstrap theming to your control. To find more information on using **Bootstrap** theming in your application, see [Bootstrap Theming](#).
- **About**
Clicking the **About** item displays a dialog box, which is helpful in finding the version number of **ASP.NET Web Forms Edition** and online resources.

CSS Selectors

You can style any **C1Rating** elements using CSS styles to make their appearance truly unique. To make the customization process easier, ComponentOne includes CSS selectors for each of its built-in themes.

You can apply general CSS properties such as background, text, font, border, outline, margin, padding, list, and table to applicable CSS selectors.

For a list of common individual CSS selectors and grouped CSS selectors, select the **C1Rating** control in your project, and view the drop-down list next to the **CssClass** property in the Visual Studio Properties window. **C1Rating** CSS selectors start with `wijmo-wijrating`:

```
wijmo-wijrating
wijmo-wijrating-hover
wijmo-wijrating-hover-24
wijmo-wijrating-hover-32
wijmo-wijrating-hover-bar-11
wijmo-wijrating-hover-bar-21
wijmo-wijrating-hover-bar-31
```

You can combine the individual CSS selectors as a group to make the CSS selector more specific and strong.

[Working with the Client-Side](#)

Working with the Client-Side

The **Rating for ASP.NET Web Forms** control has a very rich client-side object model since most members are identical to the members in the server-side control.

When a **C1Rating** control is rendered, an instance of the client-side control will be created automatically. This means that you can enjoy the convenience of accessing properties and methods of the **C1Rating** control without having to postback to the server.

Using client-side code, you can implement many features in your Web page without the need to send information to the Web server, which takes time. Thus, using the client-side object model can increase the efficiency of your Web site.

See Also

[Client-Side Events](#)

Client-Side Events

Rating for ASP.NET Web Forms includes several client-side events that allow you to manipulate the **C1Rating** control when an action such as the control is hovered.

You can use the sever-side properties, listed in the Client Side Event table, to specify the name of the JavaScript function that will respond to a particular client-side event. For example, to assign a JavaScript function called **starHover** to respond when the control is hovered, you would set the [OnClientHover](#) property to **starHover**.

The following table lists the events that you can use in your client scripts. These properties are defined on the server side, but the actual events or the name you declare for each JavaScript function are defined on the client side.

Event Server-Side Property Name	Event Name	Description
OnClientHover	hover	Occurs when the widget is hovered over.

OnClientRated	rating	Occurs after the widget rating.
OnClientRating	rating	Occurs before the widget rating.
OnClientReset	reset	Occurs when the reset button is clicked.

Descriptions and syntax examples for the **C1Rating** client-side events can also be found at <http://wijmo.com/wiki/index.php/Rating>.

[Task-Based Help](#)

Task-Based Help

The task-based help section assumes that you are familiar with programming in the Visual Studio ASP.NET environment and have a general understanding of the **Rating for ASP.NET Web Forms** control.

Each topic provides a solution for specific tasks using the **C1Rating** control. By following the steps outlined in each topic, you will be able to create projects using a variety of **C1Rating** features.

[Handling the Hover and Rated Events](#)

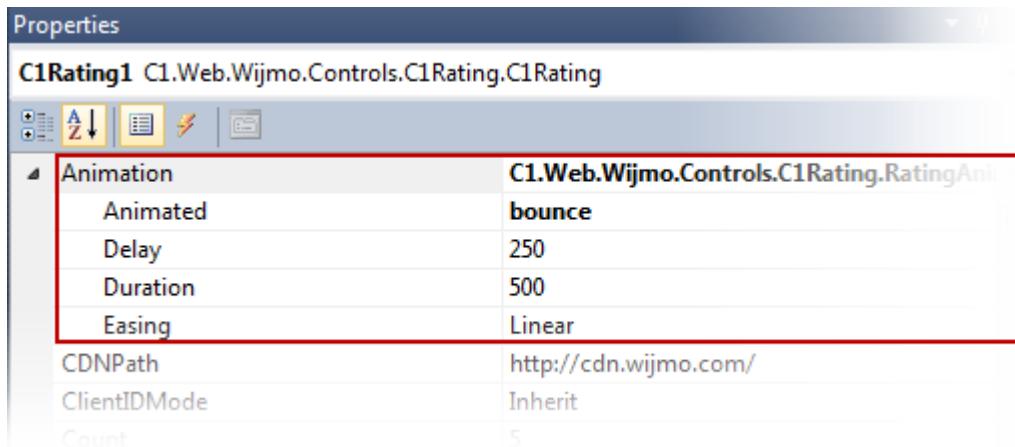

Adding Animation to the Rating Control

You can fully customize animation effects for the **C1Rating** icons by using the **RatingAnimation** properties. This topic will walk you through adding animation effects in Design View and in Source View.

In Design View

Complete the following steps:

1. Select the **C1Rating** control and in the Properties window, click the Alphabetize button  to alphabetize the list of properties.
2. Click the arrow next to the **Animation** property to open the list of property options.

3. Choose one of the Animation effects available and type the name in the "Animated" section. For this Task-Based Help, type "bounce".
4. Press F5 to run the program. Click on the stars to show the animation effect.

In Source View

Add the following markup between the `<c1:C1Rating>` tags:

[To write code in Source View](#)

```
<Animation Animated="bounce" Easing="Linear" Delay="250"
Duration="500" />
```

[Customizing the C1Rating Icons](#)

Customizing the C1Rating Icons

You can customize the type of icon you use for your rating system. There are four different icon sets available for use: two sizes of stars, thumbs up and down, and a bar array. This topics in this section will walk you through using one of the larger star options, using the thumbs up and thumbs down option, and using the bar array option.

See Also

[Using the String 24 Star Rating Option](#)

[Using the Thumbs Up and Thumbs Down Rating Option](#)

[Using the Bar Array Rating Option](#)

Using the String 24 Star Rating Option

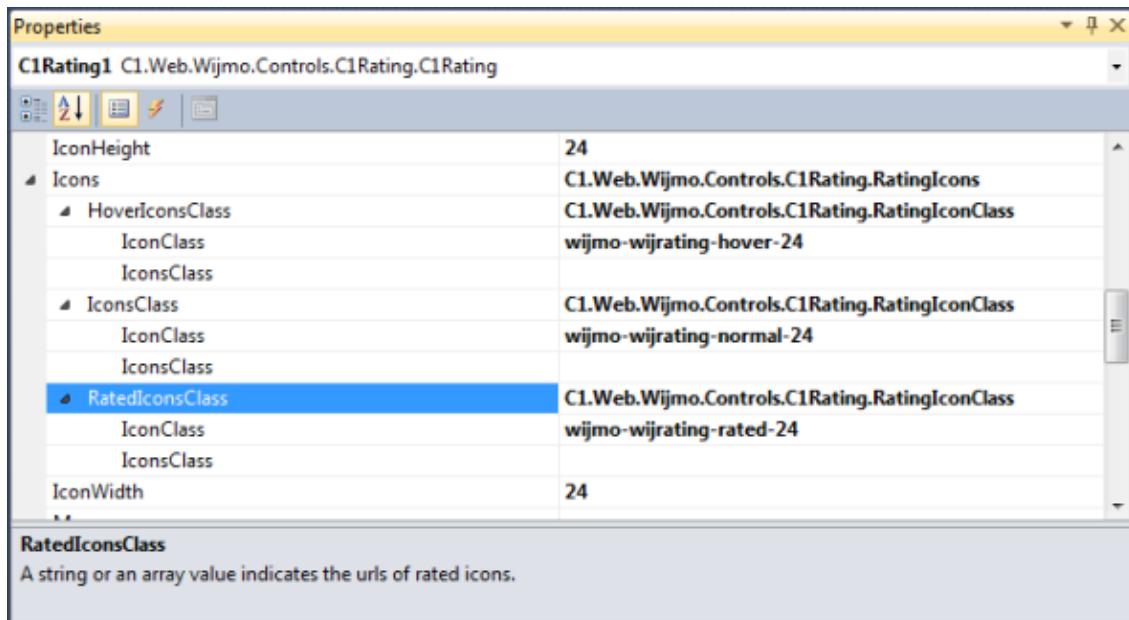

This topic will take you through setting one of the customized star rating options. There are two larger sizes of the string star rating options: the string 24 star rating option and the string 32 star rating option. For this task-based help, we will use the string 24 star rating option.

In Design View

Complete the following steps for String 24 Star rating option:

1. Click **View | Properties** in the Visual Studio toolbar to open the **C1Rating Properties** window.
2. Scroll down to **Icons** and use the arrows to open the property nodes.
3. For **IconHeight** and **IconWidth**, set the values to 24.
4. Under **HoverIconsClass**, enter **wijmo-wijrating-hover-24** for the **IconClass**.
5. Under **IconsClass**, enter **wijmo-wijrating-normal-24** for the **IconClass**.
6. Under **RatedIconsClass**, enter **wijmo-wijrating-rated-24** for the **IconClass**.

Your **Properties** window should look like the following image:

7. Press F5 to run the program. The stars used in the rating widget should look like this:

In Source View

1. Insert `IconHeight="24"` and `IconWidth="24"` into the `<cc1:C1Rating>` tag so your markup resembles the following:

[To write code in Source View](#)

```
<cc1:C1Rating ID="C1Rating1" runat="server" IconHeight="24"  
IconWidth="24">  
</cc1:C1Rating>
```

2. Insert the following markup before the closing `</cc1:C1Rating>` tag to create the icons:

[To write code in Source View](#)

```
<Icons>  
    <IconsClass IconClass="wijmo-wijrating-normal-24"/>  
    <HoverIconsClass IconClass="wijmo-wijrating-hover-24"/>  
    <RatedIconsClass IconClass="wijmo-wijrating-rated-24"/>  
</Icons>
```

3. Press F5 to run your application.

See Also

[Using the Thumbs Up and Thumbs Down Rating Option](#)

Using the Thumbs Up and Thumbs Down Rating Option

This topic illustrates how to change the rating icons to the Thumbs up and Thumbs down icons in the Design View and in the Source View.

In Design View

Complete the following steps to change the IconsPropertiesfor the thumbs up and thumbs down option:

1. Use the smart tag to set the **Total Value** and the **Count** to **2**.
2. Go to the Properties window to set the **IconHeight** and the **IconWidth properties** to **16**.
3. Set the **IconsClass** property of **HoverIconsClass** to **wijmo-wijrating-hover-thumbdown,wijmo-wijrating-hover-thumbup**.
4. Set the **IconsClass** property of **IconsClass** to **wijmo-wijrating-normal-thumbdown,wijmo-wijrating-normal-thumbup**.
5. Set the **IconsClass** property of **RatedIconsClass** to **wijmo-wijrating-rated-thumbdown,wijmo-wijrating-rated-thumbup**.
6. Set the **RatingMode** property to "**Single**".
7. Press F5 to run the program. The Thumbs Up and Thumbs Down option should look like this:

In Source View

Complete the following steps:

1. Place the following tag before the <Animation> tag:

[To write code in Source View](#)

```
<Icons>
    <IconsClass IconsClass="wijmo-wijrating-normal-
        thumbdown,wijmo-wijrating-normal-thumbup" />
    <HoverIconsClass IconsClass="wijmo-wijrating-hover-
        thumbdown,wijmo-wijrating-hover-thumbup" />
    <RatedIconsClass IconsClass="wijmo-wijrating-rated-
        thumbdown,wijmo-wijrating-rated-thumbup" />
</Icons>
```

2. Change the **Total Value** to **2**.
3. Change the **Count** to **2**.
4. Press F5 or Debug to run the program. The Thumbs Up and Thumbs Down option should look like this:

See Also

[Using the Bar Array Rating Option](#)

Using the Bar Array Rating Option

The Bar Array Option is easy to set and customize. This topic will take you through setting the Bar Array as your rating option.

In Design View

Complete the following steps:

1. Select the rating widget and open the smart tag.
2. Set the **Count** property to **6**, the **TotalValue** to **6**, the **Split** to **1**, and the **Value** to **4**.
3. In the Properties window, set the **IconHeight** property to **61**.
4. Set the **IconWidth** property to **11**.
5. Set the **HoverIconsClass** property **IconsClass** to **wijmo-wijrating-hover-bar-11,wijmo-wijrating-hover-bar-21,wijmo-wijrating-hover-bar-31,wijmo-wijrating-hover-bar-41,wijmo-wijrating-hover-bar-51,wijmo-wijrating-hover-bar-61**.
6. Set the **IconsClass** property **IconsClass** to **wijmo-wijrating-normal-bar-11,wijmo-wijrating-normal-bar-21,wijmo-wijrating-normal-bar-31,wijmo-wijrating-normal-bar-41,wijmo-wijrating-normal-bar-51,wijmo-wijrating-normal-bar-61**.
7. Set the **RatedIconsClass** property **IconsClass** to **wijmo-wijrating-rated-bar-11,wijmo-wijrating-rated-bar-21,wijmo-wijrating-rated-bar-31,wijmo-wijrating-rated-bar-41,wijmo-wijrating-rated-bar-51,wijmo-wijrating-rated-bar-61**.
8. Set the **RatingMode** property to **Continuous**.

9. Press F5 to run the program. The rating Array should appear like this:

In Source View

Complete the following steps:

1. Place the following tag before the <Animation> tag:

[To write code in Source View](#)

```
<Icons>

    <IconsClass IconsClass="wijmo-wijrating-normal-bar-11,wijmo-
wijrating-normal-bar-21,wijmo-wijrating-normal-
bar-31,wijmo-wijrating-normal-bar-41,wijmo-wijrating-normal-bar-
51,wijmo-wijrating-normal-bar-61"/>
    <HoverIconsClass IconsClass="wijmo-wijrating-hover-bar-
11,wijmo-wijrating-hover-bar-21,wijmo-wijrating-hover-
bar-31,wijmo-wijrating-hover-bar-41,wijmo-wijrating-hover-bar-
51,wijmo-wijrating-hover-bar-61"/>
    <RatedIconsClass IconsClass="wijmo-wijrating-rated-bar-
11,wijmo-wijrating-rated-bar-21,wijmo-wijrating-rated-
bar-31,wijmo-wijrating-rated-bar-41,wijmo-wijrating-rated-bar-
51,wijmo-wijrating-rated-bar-61"/>

</Icons>
```

2. Change the **Total Value** to **6**, the **Count** to **6**, the **IconHeight** to **61**, the **IconWidth** to **11**, and the **Value** to **4**.
3. Press F5 or start Debugging to run the project. The rating Array should appear like this:

See Also

[Changing the Rating Orientation and Direction](#)

Changing the Rating Orientation and Direction

You can customize the orientation of the rating widget to determine if it appears horizontally or vertically. You can also customize the directionality of the rating widget to determine if it reads from right to left or from left to right.

In Design View

Complete the following steps:

1. In the **C1Rating** Properties window, set the **Orientation** property to **Vertical**.
2. Set the **Direction** property to **Reverse**.
3. Press F5 to run the program. Note that the rating control now displays ratings from the bottom up as opposed to the top down. The control should also run vertically as opposed to horizontally:

In Source View

Complete the following steps:

1. In the `<ccl:C1Rating>` tags, set the **Direction** property to "**Reversed**", and the **Orientation** property to "**Vertical**" as in the markup below:

To write code in Source View

```
<ccl:C1Rating id="C1Rating1" runat="server" TotalValue="6"
Count="6" Direction="Reversed"
    IconHeight="24" IconWidth="24" Orientation="Vertical"
Value="4">

<Icons>
    <IconsClass IconClass="wijmo-wijrating-normal-24"/>
    <HoverIconsClass IconClass="wijmo-wijrating-hover-24"/>
    <RatedIconsClass IconClass="wijmo-wijrating-rated-24"/>
</Icons>

<Animation Animated="bounce" Easing="Linear" Delay="250"
Duration="600"/>

</ccl:C1Rating>
```

2. Press F5 or start debugging to run the program.

[Handling the Hover and Rated Events](#)

Handling the Hover and Rated Events

In this topic, you will learn how to handle the **Hover** and **Rated** events for the **C1Rating** control in Source View.

Complete the following steps:

1. Between the first set of `<asp:Content>` tags, insert the following script:

[To write code in Source View](#)

```
<script type="text/javascript">
    function starHover(e, args) {
        $("#hover").html(args.value);
    }
    function starRated(e, args) {
        $("#rated").html(args.value);
    }
</script>
```

2. After the closing `</cc1:C1Rating>` tag, insert the following markup:

[To write code in Source View](#)

```
<div> hover value is:<label id="hover"></label></div>
<div> rated value is:<label id="rated"></label></div>
```

3. Within the `<cc1:C1Rating>` tags, after the **Value** property, set the following two properties:

- `OnClientHover="starHover"`
- `OnClientRated="starRated"`

The final script and markup should look like the following :

[To write code in Source View](#)

```
<asp:Content ID="HeaderContent" runat="server"
ContentPlaceHolderID="HeadContent">
<script type="text/javascript">
    function starHover(e, args) {
```

```
$("#hover").html(args.value);
}
function starRated(e, args) {
    $("#rated").html(args.value);
}
</script>
</asp:Content>

<asp:Content ID="BodyContent" runat="server"
ContentPlaceHolderID="MainContent">
    <ccl:C1Rating ID="C1Rating1" runat="server"
    OnClientHover="starHover" OnClientRated="starRated">
        </ccl:C1Rating>
    <div> hover value is:<label id="hover"></label></div>
    <div> rated value is:<label id="rated"></label></div>
</asp:Content>
```

4. Press F5 or start debugging to run the program.

Client-Side Reference

As part of the amazing [ComponentOne Web stack](#), the Wijmo jQuery UI widgets are optimized for client-side Web development and utilize the power of jQuery for superior performance and ease of use.

The ComponentOne Wijmo website at <http://wijmo.com/widgets/> provides everything you need to know about Wijmo widgets, including demos and samples, documentation, theming examples, support and more.

The client-side documentation provides an overview, sample markup, options, events, and methods for each widget. To get started with client-side Web development for **Rating for ASP.NET Web Forms**, click one of the external links to view our Wijmo wiki documentation. Note that the **Overview** topic for each of the widgets applies mainly to the widget, not to the server-side ASP.NET Web Forms control.

[Using the Wijmo CDN](#)

Using the Wijmo CDN

You can easily load the client-side Wijmo widgets into your web page using a Content Delivery Network (CDN). CDN makes it quick and easy to use external libraries, and deploy them to your users. A CDN is a network of computers around the world that host content. Ideally, if you're in the United States and you access a webpage using a CDN, you'll get your content from a server based in the US. If you're in India or China, and you access the SAME webpage, the content will come from a server a little closer to your location.

When web browsers load content, they commonly will check to see if they already have a copy of the file cached. By using a CDN, you can benefit from this. If a user had previously visited a site using the same CDN, they will already have a cached version of the files on their machine. Your page will load quicker since it doesn't need to re-download your support content.

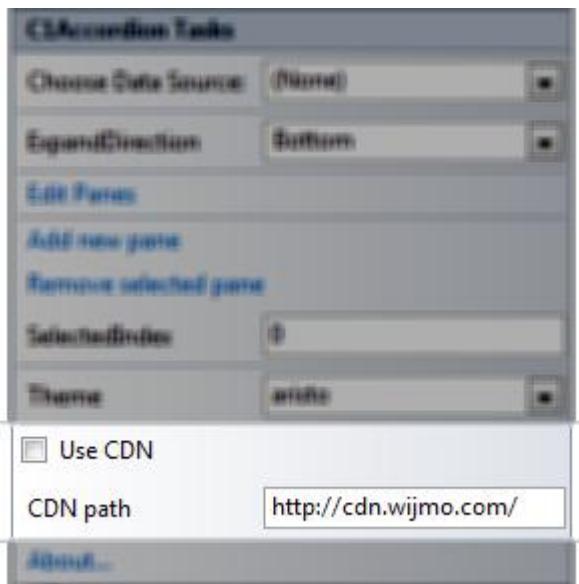

Wijmo has had CDN support from the very beginning. You can find the CDN page at <http://wijmo.com/downloads/cdn/>. The markup required for loading Wijmo into your page looks similar to this:

To write code in Source Code

```
<!--jQuery References-->
<script src="http://ajax.aspnetcdn.com/ajax/jquery/jquery-1.7.1.min.js"
type="text/javascript"></script>
<script src="http://ajax.aspnetcdn.com/ajax/jquery.ui/1.8.17/jquery-
ui.min.js" type="text/javascript"></script>
<!--Theme-->
<link href="http://cdn.wijmo.com/themes/rocket/jquery-wijmo.css"
rel="stylesheet"
    type="text/css" title="rocket-jqueryui" />
<!--Wijmo Widgets CSS-->
<link href="http://cdn.wijmo.com/jquery.wijmo-
complete.all.2.0.0.min.css" rel="stylesheet"
    type="text/css" />
<!--Wijmo Widgets JavaScript-->
<script src="http://cdn.wijmo.com/jquery.wijmo-open.all.2.0.0.min.js"
type="text/javascript"></script>
<script src="http://cdn.wijmo.com/jquery.wijmo-
complete.all.2.0.0.min.js" type="text/javascript"></script>
```

In this markup, you'll notice that some of the .js files are labeled as *.min.js. These files have been minified - in other words, all unnecessary characters have been removed - to make the pages load faster. You will also notice that there are no references to individual .js files. The JavaScript for all widgets, CSS, and jQuery references have been combined into one file, respectively, such as wijmo-complete.2.0.0.min.js. If you want to link to individual .js files, see the **Dependencies** topic for each widget.

With the **ASP.NET Web Forms Edition** controls, you can click the **Use CDN** checkbox in the control's **Tasks** menu and specify the **CDN path** if you want to access the client-side widgets.

GetPropertyValue<V> Method

Gets the property value by property name.

Syntax

Visual Basic (Declaration)

```
Public Function GetPropertyValue(Of V)( _
    ByVal propertyName As System.String, _
    ByVal nullValue As V _ 
) As V
```

C#

```
public V GetPropertyValue<V>(
    System.string propertyName,
    V nullValue
)
```

Parameters

propertyName

Name of the property.

nullValue

The null value.

Type Parameters

V

GetScriptDescriptors Method

When overridden in a derived class, registers the WidgetDescriptor objects for the control.

Syntax

Visual Basic (Declaration)

```
Public Overridable Function GetScriptDescriptors() As
System.Collections.Generic.IEnumerable(Of ScriptDescriptor)
```

C#	
----	--

```
public virtual System.Collections.Generic.IEnumerable<ScriptDescriptor>
GetScriptDescriptors()
```

Return Value

An enumeration of WidgetDescriptor objects.

See Also

Reference

[C1TargetControlBase Class](#)

[C1TargetControlBase Members](#)

GetScriptReferences Method

When overridden in a derived class, registers an additional script libraries for the extender control.

Syntax

Visual Basic (Declaration)	
----------------------------	--

```
Public Overridable Function GetScriptReferences() As
System.Collections.Generic.IEnumerable(Of ScriptReference)
```

C#	
----	--

```
public virtual System.Collections.Generic.IEnumerable<ScriptReference>
GetScriptReferences()
```

Return Value

An object that implements the **System.Collections.IEnumerable** interface and that contains ECMAScript (JavaScript) files that have been registered as embedded resources.

See Also

Reference

[C1TargetControlBase Members](#)

RegisterDesignTimeStyleSheet Method

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

resource name of stylesheet file

Register design time stylesheet

Syntax

Visual Basic (Declaration)

```
Public Sub RegisterDesignTimeStyleSheet( _
    ByVal writer As System.Web.UI.HtmlTextWriter, _
    ByVal cssResourceName As System.String _
)
```

C#

```
public void RegisterDesignTimeStyleSheet(
    System.Web.UI.HtmlTextWriter writer,
    System.string cssResourceName
)
```

Parameters

writer

The **System.Web.UI.HtmlTextWriter** object that receives the server control content.

cssResourceName

resource name of stylesheet file

SetPropertyValue<V> Method

Sets the property value by property name.

Syntax

Visual Basic (Declaration)

```
Public Sub SetPropertyValue(Of V)( _
    ByVal propertyName As System.String, _
    ByVal value As V _
)
```

C#	
----	--

```
public void SetPropertyValue<V>(
    System.string propertyName,
    V value
)
```

Parameters

propertyName

Name of the property.

value

The value.

Type Parameters

V

CDNDependencyPaths Property

A string array value specifies all css/js references that wijmo control depends on.

Syntax

Visual Basic (Declaration)	
----------------------------	--

```
<C1CategoryAttribute("Behavior")>
<System.ComponentModel.RefreshPropertiesAttribute(RefreshProperties.All)>
<C1DescriptionAttribute(Key="C1Base.CDNDependencyPaths", Description="A
string array value specifies all css/js references that wijmo control depends
on.")>
<System.ComponentModel.DefaultValueAttribute()>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeria
lizationVisibility.Hidden)>
Public Overridable Property CDNDependencyPaths As System.String()
```

C#

```
[C1Category("Behavior")]
[System.ComponentModel.RefreshProperties(RefreshProperties.All)]
[C1Description(Key="C1Base.CDNDependencyPaths", Description="A string array
value specifies all css/js references that wijmo control depends on.")]
[System.ComponentModel.DefaultValue()]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationV
isibility.Hidden)]
public virtual System.string[] CDNDependencyPaths {get; set;}
```

Remarks

Using this property, user can specify the CDN dependencies(such as jQuery, jQuery UI, jQuery mobile, bootstrap). If some dependencies are set in this property, wijmo controls will find dependencies path in this property. If found, use the path to load dependency, otherwise, use the default CDN path. For example, if user wants to specify the dependencies of jQuery and jQuery UI, he can set the value like this: ["http://ajax.aspnetcdn.com/ajax/jquery/jquery-
1.11.1.min.js", "http://ajax.aspnetcdn.com/ajax/jquery.ui/1.11.1/jquery-ui.js"]

[Overload List](#)

GetScriptDescriptors(String) Method

When overridden in a derived class, registers the WidgetDescriptor objects for the control.

Syntax

Visual Basic (Declaration)	
----------------------------	--

```
Public Overloads Function GetScriptDescriptors( _
    ByVal targetSelector As System.String _
) As System.Collections.Generic.IEnumerable(Of ScriptDescriptor)
```

C#	
----	--

```
public System.Collections.Generic.IEnumerable<ScriptDescriptor>
GetScriptDescriptors(
    System.string targetSelector
)
```

Parameters

targetSelector

The target selector.

Return Value

An enumeration of WidgetDescriptor objects.

RegisterDesignTimeStyleSheet Method

Register design-time CSS stylesheet.

Syntax

Visual Basic (Declaration)	
----------------------------	--

```
Public Sub RegisterDesignTimeStyleSheet( _
    ByVal writer As System.Web.UI.HtmlTextWriter, _
    ByVal cssResourceName As System.String _
)
```

C#	
----	--

```
public void RegisterDesignTimeStyleSheet(
    System.Web.UI.HtmlTextWriter writer,
```

```
System.string cssResourceName
)
```

Parameters

writer

cssResourceName

CSS resource name.

Remarks

The `cssResourceName` is the link to an resource element.

C1.Web.Wijmo.Controls.C1Rating

Namespace

Overview

Classes

	Class	Description
 C1Rating		The C1Rating class contains properties specific to the C1Rating.

 C1RatingSerializer	Serializes a C1Rating control.
 RatingAnimation	Represents the RatingAnimation class which contains all settings for the animation.
 RatingHint	Represents the hint information when hover the rating star.
 RatingIconClass	Represents the RatingIconClass class which contains all settings for the icon's class.
 RatingIcons	Represents the RatingIcons class which contains all settings for the customized icons.
 RatingResetButton	Represents a reset button.

Enumerations

	Enumeration	Description
 Direction	Use the members of this enumeration to set the value of the Direction property.	
 Orientation	Use the members of this enumeration to set the value of the Orientation property.	
 RatingMode	Use the members of this enumeration to set the value of the RatingMode property.	
 ResetButtonPosition	Use the members of this enumeration to set the value of the ResetButton.Position property.

Public Constructors

	Name	Description
	C1Rating Constructor	Initializes a new instance of the C1Rating class.

[Top](#)

Public Properties

	Name	Description
	AccessKey	(Inherited from System.Web.UI.WebControls.WebControl)
	Animation	A value indicates whether to show animation and the duration for the animation.
	AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
	Attributes	(Inherited from

		System.Web.UI.WebControls.WebControl)
 CDNDependencyPaths	CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 CDNPath	CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 ClientID	ClientID	(Inherited from System.Web.UI.Control)
 ClientIDMode	ClientIDMode	(Inherited from System.Web.UI.Control)
 Controls	Controls	(Inherited from System.Web.UI.Control)
 ControlStyle	ControlStyle	(Inherited from System.Web.UI.WebControls.WebControl)
 ControlStyleCreated	ControlStyleCreated	(Inherited from System.Web.UI.WebControls.WebControl)
 Count	Count	Number of stars to display.
 CssClass	CssClass	(Inherited from System.Web.UI.WebControls.WebControl)
 Direction	Direction	Direction of the control.
 DisplayVisible	DisplayVisible	Gets or sets a value that indicates whether a server control is rendered as UI on the page. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 EnableCombinedJavaScripts	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)

 Enabled	Gets or sets a value indicating whether the Web server control is enabled. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 EnableTheming	(Inherited from System.Web.UI.WebControls.WebControl)
 EnableViewState	(Inherited from System.Web.UI.Control)
 HasAttributes	(Inherited from System.Web.UI.WebControls.WebControl)
 Height	(Inherited from System.Web.UI.WebControls.WebControl)
 Hint	A value that represents the hint information when hover the rating star.
 IconHeight	Height of icon. All icons should have the same height.
 Icons	A value that indicates the settings for customize rating icons.
 IconWidth	Width of icon. All icons should have the same width.
 ID	(Inherited from System.Web.UI.Control)
 Max	The maximize value that can be rated.
 Min	The minimize value that can be rated.
 NamingContainer	(Inherited from System.Web.UI.Control)
 OnClientHover	Fires when hover the control.
 OnClientRated	Fires after the control is rated.

 OnClientRating	Fires before the control rating. This event can be cancelled. "return false;" to cancel the event.
 OnClientReset	Fires when click the reset button.
 Orientation	Orientation of the control.
 Page	(Inherited from System.Web.UI.Control)
 Parent	(Inherited from System.Web.UI.Control)
 RatingMode	Rating mode of the control.
 RenderingCompatibility	(Inherited from System.Web.UI.Control)
 ResetButton	A value that represents a reset button.
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.WebControls.WebControl)
 Split	The sections of every star split into.
 Style	(Inherited from System.Web.UI.WebControls.WebControl)
 SupportsDisabledAttribute	(Inherited from System.Web.UI.WebControls.WebControl)
 TabIndex	(Inherited from System.Web.UI.WebControls.WebControl)
 TemplateControl	(Inherited from System.Web.UI.Control)
 TemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 Theme	Name of the theme that will be used to style the

		widgets. Available embedded themes include: aristo, midnight, and ui-lightness. Note that only one theme can be used for the whole page at one time. Please make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
	ThemeSwatch	A value that indicates the theme swatch of the control, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
	ToolTip	(Inherited from System.Web.UI.WebControls.WebControl)
	TotalValue	Total value of the control.
	UniqueID	(Inherited from System.Web.UI.Control)
	UseCDN	Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
	ValidateRequestMode	(Inherited from System.Web.UI.Control)
	Value	Rated value of the control.
	ViewStateMode	(Inherited from System.Web.UI.Control)
	Width	(Inherited from System.Web.UI.WebControls.WebControl)
	WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from

		C1.Web.Wijmo.Controls.C1TargetControlBase
 WijmoCssAdapter		Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)

Public Methods

	Name	Description
 ApplyStyle		(Inherited from System.Web.UI.WebControls.WebControl)
 ApplyStyleSheetSkin		(Inherited from System.Web.UI.Control)
 CopyBaseAttributes		(Inherited from System.Web.UI.WebControls.WebControl)
 .DataBind		(Inherited from System.Web.UI.Control)
 Dispose		(Inherited from System.Web.UI.Control)
 FindControl		(Inherited from System.Web.UI.Control)
 Focus		(Inherited from System.Web.UI.Control)
 GetPropertyValue<V>		Gets the property value by property name. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 GetRouteUrl		Overloaded. (Inherited from System.Web.UI.Control)
 GetScriptDescriptors		When overridden in a derived class, registers the WidgetDescriptor objects for the control. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 GetScriptReferences		When overridden in a derived class, registers an additional script libraries for the extender control. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)

 GetUniqueIDRelativeTo	(Inherited from System.Web.UI.Control)
 HasControls	(Inherited from System.Web.UI.Control)
 LoadLayout	Overloaded. Loads control layout properties from the file.
 MergeStyle	(Inherited from System.Web.UI.WebControls.WebControl)
 RegisterDesignTimeStyleSheet	Register design time stylesheet (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 RenderBeginTag	(Inherited from System.Web.UI.WebControls.WebControl)
 RenderControl	(Inherited from System.Web.UI.Control)
 RenderEndTag	(Inherited from System.Web.UI.WebControls.WebControl)
 ResolveClientUrl	(Inherited from System.Web.UI.Control)
 ResolveUrl	(Inherited from System.Web.UI.Control)
 SaveLayout	Overloaded. Saves the control layout properties to the file.
 SetPropertyValue<V>	Sets the property value by property name. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 SetRenderMethodDelegate	(Inherited from System.Web.UI.Control)

[Top](#)

Public Events

	Name	Description
 DataBinding	(Inherited from System.Web.UI.Control)	
 Disposed	(Inherited from System.Web.UI.Control)	
 Init	(Inherited from System.Web.UI.Control)	

 Load	(Inherited from System.Web.UI.Control)
 PreRender	(Inherited from System.Web.UI.Control)
 Unload	(Inherited from System.Web.UI.Control)

LoadLayout(String,LayoutType) Method

The file where the values of layout properties will be loaded.

The layout types to load.

Loads control layout properties with specified types from the file.

Syntax

Visual Basic (Declaration)

```
Public Overloads Sub LoadLayout( _  
    ByVal filename As System.String, _  
    ByVal LayoutTypes As LayoutType _  
)
```

C#

```
public void LoadLayout(  
    System.string filename,  
    LayoutType LayoutTypes  
)
```

Parameters

filename

The file where the values of layout properties will be loaded.

layoutTypes

The layout types to load.

LoadLayout(Stream,LayoutType) Method

The stream where the values of the layout properties will be loaded.

The layout types to load.

Loads the control layout properties with specified types from the stream.

Syntax

Visual Basic (Declaration)

```
Public Overloads Sub LoadLayout( _
    ByVal stream As System.IO.Stream, _
    ByVal LayoutTypes As LayoutType _
)
```

C#

```
public void LoadLayout(
    System.IO.Stream stream,
    LayoutType LayoutTypes
)
```

Parameters

stream

The stream where the values of the layout properties will be loaded.

layoutTypes

The layout types to load.

Public Properties

	Name	Description

 AccessKey	(Inherited from System.Web.UI.WebControls.WebControl)
 Animation	A value indicates whether to show animation and the duration for the animation.
 AppRelativeTemplateSourceDirectory	(Inherited from System.Web.UI.Control)
 Attributes	(Inherited from System.Web.UI.WebControls.WebControl)
 CDNDependencyPaths	A string array value specifies all css/js references that wijmo control depends on. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 CDNPath	Content Delivery Network path. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 ClientID	(Inherited from System.Web.UI.Control)
 ClientIDMode	(Inherited from System.Web.UI.Control)
 Controls	(Inherited from System.Web.UI.Control)
 ControlStyle	(Inherited from System.Web.UI.WebControls.WebControl)
 ControlStyleCreated	(Inherited from System.Web.UI.WebControls.WebControl)
 Count	Number of stars to display.
 CssClass	(Inherited from System.Web.UI.WebControls.WebControl)
 Direction	Direction of the control.
 DisplayVisible	Gets or sets a value that indicates whether a server

		control is rendered as UI on the page. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
	EnableCombinedJavaScripts	Enable JavaScripts files combined into one file. In order to combined enabled, you must register the WijmoHttpHandler in web.config. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
	Enabled	Gets or sets a value indicating whether the Web server control is enabled. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
	EnableTheming	(Inherited from System.Web.UI.WebControls.WebControl)
	EnableViewState	(Inherited from System.Web.UI.Control)
	HasAttributes	(Inherited from System.Web.UI.WebControls.WebControl)
	Height	(Inherited from System.Web.UI.WebControls.WebControl)
	Hint	A value that represents the hint information when hover the rating star.
	IconHeight	Height of icon. All icons should have the same height.
	Icons	A value that indicates the settings for customize rating icons.
	IconWidth	Width of icon. All icons should have the same width.
	ID	(Inherited from System.Web.UI.Control)

 Max	The maximize value that can be rated.
 Min	The minimize value that can be rated.
 NamingContainer	(Inherited from System.Web.UI.Control)
 OnClientHover	Fires when hover the control.
 OnClientRated	Fires after the control is rated.
 OnClientRating	Fires before the control rating. This event can be cancelled. "return false;" to cancel the event.
 OnClientReset	Fires when click the reset button.
 Orientation	Orientation of the control.
 Page	(Inherited from System.Web.UI.Control)
 Parent	(Inherited from System.Web.UI.Control)
 RatingMode	Rating mode of the control.
 RenderingCompatibility	(Inherited from System.Web.UI.Control)
 ResetButton	A value that represents a reset button.
 Site	(Inherited from System.Web.UI.Control)
 SkinID	(Inherited from System.Web.UI.WebControls.WebControl)
 Split	The sections of every star split into.
 Style	(Inherited from System.Web.UI.WebControls.WebControl)
 SupportsDisabledAttribute	(Inherited from

		System.Web.UI.WebControls.WebControl)
 TabIndex		(Inherited from System.Web.UI.WebControls.WebControl)
 TemplateControl		(Inherited from System.Web.UI.Control)
 TemplateSourceDirectory		(Inherited from System.Web.UI.Control)
 Theme		Name of the theme that will be used to style the widgets. Available embedded themes include: aristo, midnight, and ui-lightness. Note that only one theme can be used for the whole page at one time. Please make sure that all widget extenders have the same Theme value. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 ThemeSwatch		A value that indicates the theme swatch of the control, this property only works when WijmoControlMode property is Mobile. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 ToolTip		(Inherited from System.Web.UI.WebControls.WebControl)
 TotalValue		Total value of the control.
 UniqueID		(Inherited from System.Web.UI.Control)
 UseCDN		Determines whether the widget extender must load client resources from CDN (Content Delivery Network) path given by property CDNPath. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 ValidateRequestMode		(Inherited from System.Web.UI.Control)

 Value	Rated value of the control.
 ViewStateMode	(Inherited from System.Web.UI.Control)
 Width	(Inherited from System.Web.UI.WebControls.WebControl)
 WijmoControlMode	A value that indicates mode of the control, whether it is a mobile or web control. Note that only one value can be used for the whole website or project. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)
 WijmoCssAdapter	Indicates the control applies the theme of JQuery UI or Bootstrap. (Inherited from C1.Web.Wijmo.Controls.C1TargetControlBase)

```
<System.Web.UI.PersistenceModeAttribute(PersistenceMode.InnerProperty)>
<C1CategoryAttribute("Appearance")>
<System.ComponentModel.NotifyParentPropertyAttribute(True)>
<TypeConverterAttribute("System.ComponentModel.ExpandableObjectConverter",
System, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")>
<LayoutAttribute(LayoutType.Appearance)>
<WidgetOptionAttribute()>
<C1DescriptionAttribute(Key="C1Rating.RatingIcons(IconsClass", Description="A
string or an array value indicates the urls of icons.")>
<System.ComponentModel.DesignerSerializationVisibilityAttribute(DesignerSeria
lizationVisibility.Content)>
Public Property IconsClass As RatingIconClass
```

C#

```
[System.Web.UI.PersistenceMode(PersistenceMode.InnerProperty)]
[C1Category("Appearance")]
[System.ComponentModel.NotifyParentProperty(true)]
[TypeConverter("System.ComponentModel.ExpandableObjectConverter", System,
Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089")]
[Layout(LayoutType.Appearance)]
[WidgetOption()]
[C1Description(Key="C1Rating.RatingIcons(IconsClass", Description="A string
or an array value indicates the urls of icons.")]
[System.ComponentModel.DesignerSerializationVisibility(DesignerSerializationV
isibility.Content)]
public RatingIconClass IconsClass {get; set;}
```

Remarks

If value is a string, all the star will apply the iconsClass. If value is an array, each star will apply the related iconsClass value by index.
